

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

NINTH REPORT

TO THE

LEGISLATURE OF VERMONT,

RELATING TO THE

REGISTRY AND RETURNS

OF

Births, Marriages and Deaths,

IN THIS STATE,

FOR

THE YEAR ENDING DECEMBER 31, 1865.

PREPARED UNDER THE DIRECTION OF
GEORGE NICHOLS, Secretary of State.

MONTPELIER:
PRINTED AT THE FREEMAN STEAM PRINTING ESTABLISHMENT.
1867.

IN SENATE, November 12, 1866.

On motion of Mr. Porter, of Addison, ordered to lie, and the Secretary directed to procure the printing of one thousand copies for the use of the General Assembly.

HENRY CLARK, Secretary.

Nov 12 1866

REPORT.

STATE OF VERMONT.

SECRETARY OF STATE'S OFFICE, }
MONTPELIER, Oct. 25, 1866. }

To the General Assembly of the State of Vermont :

In compliance with the requisitions of the law of this State, I have the honor of herewith transmitting to the General Assembly, the Ninth Annual Report, relating to the Registration and Returns of Births, Marriages and Deaths which have occurred in Vermont during the year, ending December 31, 1865.

The Summary of Remarks, deduced from the Tables, accompanying this Report, was very carefully and ably prepared by Oscar F. Fassett, M. D., of St. Albans, late President of the Vermont Medical Society, a gentleman who has evinced a deep interest in the system of Registration, and to whom, I take this occasion to tender my thanks for the many valuable suggestions relating to the subject.

Respectfully submitted,

GEORGE NICHOLS,

Secretary of State.

CONTENTS.

TABLES.

I.	GENERAL Abstracts.—Population in 1860, Births, Marriages and Deaths, registered in each town, distinguishing the sex and parentage of Births, the nativity of Marriages, the sex, aggregate and average ages, and the percentage of Deaths.....	2-17
	<i>Recapitulation of General Abstracts.....</i>	18-19
II.	BIRTHS,—showing the number of each sex, in the several counties, during each month.....	20-21
A.	<i>Supplement.</i> —Plurality Births, by counties, by months and by sex.....	22
B.	<i>Supplement.</i> —Illegitimate Births, by counties, by months and by sex.....	23
III.	MARRIAGES,—by counties and by months.....	24
IV.	PERSONS MARRIED,—by ages, and by conjugal conditions.	25-27
V.	DEATHS,—by counties, by months and by sex.....	28-29
VI.	DEATHS ACCORDING TO AGE,—showing the number of each sex at different ages, in each town and county, with the population and percentage.....	30-59
	<i>Recapitulation of Deaths according to age.....</i>	60-61
VII.	CAUSES OF DEATH,—Alphabetically arranged—showing the number of each sex, dying at different ages, during the several months, with the various diseases.....	62-72
VIII.	CLASSIFICATION OF THE CAUSES OF DEATH,—by counties, with the totals and percentage.....	73-79
IX.	OCCUPATIONS,—showing the number of those pursuing different avocations, the number of deaths in each, the ratio to the living, and the aggregate and average ages of those dying.....	80-81

VI. NINTH REGISTRATION REPORT. [1865.

REMARKS.

Accuracy of returns.....	83
Value of the Reports in relation to Science.....	83
Negligence of medical men in making proper returns.....	83
Delinquent towns in 1865.....	84
Comparison of Births, Marriages and Deaths with previous years.....	84

POPULATION.

Condition of the State in regard to its population.....	85
Effect of the war upon our population.....	85
Ratio of native and foreign population.....	85
Number of men enrolled in the State for military service.....	85

BIRTHS.

Whole number for 1865.....	86
Table of births, aggregate for nine years, with the annual birth rate, mean birth rate, and sex.....	86
Increase of births in this State.....	86
Table showing the percentage of the decrease of births by counties for 1860, '64, '65.....	87
Sex ; ratio of males to females.....	87
Preponderance of males, stillborn.....	87
“ “ males, illegitimate.....	88
Table showing each sex by counties, and the ratio of males to females.....	88
Season.....	88
Plurality births.....	88
Illegitimates.....	88
Stillborn.....	89

PARENTAGE.

Ratio of native to foreign parentage.....	89
---	----

MARRIAGES.

Whole number in 1865.....	89
Table giving comparison with former years, and the average for nine years.....	90
Social condition of parties marrying.....	90

DEATHS.

Whole number in 1865.....	90
---------------------------	----

Table showing the whole number for the last nine years, with the percentages and the ratio of the living to the dead of 1865.....	91
Average number of deaths annually.....	91
Number of dead whose ages are given.....	91
Table showing the deaths for 1865, with ages, sex and rates	91
Average age of those dying.....	91
Ratio of males to females dying.....	92
Season	92
Nativity.....	92
Percentage of deaths in the several counties.....	93

CAUSES OF DEATH.

Causes of death—General Remarks.....	93
--------------------------------------	----

Zymotics.

Whole number for 1865.....	94
Diphtheria, decrease of deaths from this cause, from preceding years.....	94
Table showing the fatality of this disease in the several counties for the last eight years.....	95
Scarlatina.....	95
Croup.....	95
Typhoid fever.....	95
Spotted fever.....	96
Dysentery, Diarrhoea, Measles, Whooping Cough and Small Pox.....	96-97

Constitutional Diseases.

Whole number of deaths from this class.....	97
Fatal diseases of this class.....	97
Consumption, its fatality.....	98
Table showing the deaths from Tubercular Disease, with percentage of all deaths, and rate to living.....	98
Ratio of males to females, dying from Tubercular disease.	98
Dropsy and Cancer.....	99

Local Diseases.

Diseases of Respiratory Organs.....	99
Ratio of deaths from this class of diseases, to the whole number dying.....	99
Nervous Diseases—their ratio of fatality.....	99
Organs of Circulation.....	100

VIII. NINTH REGISTRATION REPORT. [1865.

Developmental Diseases.

Diseases of Children.....	100
Diseases of Old People.....	100

Violent Deaths.

Whole number for 1865, and their percentage.....	100
Suicide, whole number of deaths by.....	100

APPENDIX.

Classification of Diseases.....	101-103
Laws of this State relative to the Registry and Returns of Births, Marriages and Deaths.....	104-107

REGISTRATION

REMARKS.

The tables constituting the Ninth Annual Registration Report of Births, Marriages and Deaths, for the State of Vermont, for the year ending December 31st, 1865, for completeness and accuracy surpass those of any previous year. Instead of that growing neglect which has prevailed during the last few years with regard to full and correct returns, as shown by a tabulated statement in last year's report, there appears a rapidly increasing interest, and very few towns have failed to make fair, and apparently true, records. The great strife, which for four long years absorbed the almost entire attention of all our people, has ended; and the close of this year finds the citizen soldiers of Vermont, again at their homes,—their farms and their workshops. That devotion to peaceful pursuits which had been interrupted by the war, is now restored, and society recalls its members to duties which had been neglected, or but imperfectly performed. It is also to be hoped that there is an increased appreciation of the importance of correct statistical records, such as are embraced in these reports; of their true relation to science in general, and to sanitary science in particular; of their value to individual and family interests, as well as to society in the aggregate.

While we commend the improvement in these tables, it is yet very apparent that there is a deplorable want of accuracy, especially in the mortality reports, and the fact remains that *none but medical men can properly* make records of disease and death, and yet medical men do not make these records; and again the duty returns of suggesting, most respectfully,

such a revision of existing laws as will remedy this defect. Under *causes of death*, 333 are set down as "Unknown," while such vague terms as "Disease of Bowels," "Disease of Brain," "Debility," "Dropsy," "Fits," "Humor," "Infantile," and "Sudden," are made to account for 402 other deaths; and 256 are set down to "Old Age."

During the year 1865, only eight towns, mostly small, and with a population of 3,951, have failed to make returns. These are Woodford, Averill, Bloomfield, Brighton, Brunswick, Canaan, East Haven and Pawlet. A few other towns have made but partial returns. Among these are Burlington, Barton, Enosburgh, Franklin, Ferrisburgh and Richmond.

The tables, constituting the Ninth Annual Registration Report, for the year 1865, show that, during the year ending December 31st, the whole number of births was 5,353, of which 2,761 were males, 2,564 were females, and of 28 the sex is not stated.

Marriages were 2,569 couples, or 5,138 persons, a number greater by 254 couples, or 508 persons, than ever before reported.

Deaths were 4,858, of whom 2,426 were males, and 2,404 were females; of 28 the sex is not stated.

Compared with 1864, the number of births is greater by 600. The number of marriages is greater by 765, or 1,530 persons. The number of deaths is less by 435.

Compared with the year 1860, (before the war,) the number of births is less by 1,098. Marriages, greater by 390, or 780 persons; and deaths greater by 961.

Compared with the average of eight years ending with 1864, the number of births is less by 665. Marriages, greater by 498, or 996 persons. Deaths, greater by 534.

Estimating the population at 315,098, which is nearly correct, probably, we have one birth to every 58.8 of inhabitants. One person out of every 61.32 married, and one death to every 65 persons living.

The average number of births daily, was 14.52. Of marriages 7. Of deaths 13.31.

The average age of those who died was 35.38 years. Average age during nine years ending with 1865, was 34.27 years.

Average age of those who died during the years 1862-3-4 was 30.29 years.

Average age of those who died during six years of the last nine, excluding the years 1862-3-4, was 36.29 years.

POPULATION.

At the last census in 1860, the population of Vermont was 315,098, of whom 158,786 were males, and 156,312 females. Of these 282,335 were Americans, of whom 141,299 were males, and 141,056 females. Thirty-two thousand and seven hundred and forty-three were foreigners, of whom 17,487 were males, and 15,256 females.

It is impossible to know the present population, yet it probably varies but little at the close of the present year, from the above aggregate, but perhaps differently divided. During the war this State furnished 34,238 men for service, but as some were re-enlistments, the actual number of persons in service was 28,967. The loss by all casualties was 13,728, but of these 5,022 were discharged and returned home, mostly, while of the remaining 8,706 few, if any, have returned. During the first half of the year 1865, the population remained in the same disturbed condition as during the two previous years, while in the last half of the year nearly all of Vermont regiments had been mustered out of service.

On the 30th day of April, 1865, the number of men enrolled in the State, was 23,326, or 14.69 per cent. of the male population of 1860; 7.4 per cent. of whole population.

BIRTHS.—TABLE I.

The whole number of births for the year 1865, was 5,353.
The number for the last nine years is as follows :

Years.	Whole No.	Birth rate.	No. pop. to 1 birth.	Male.	Female.
1857.....	6,412	2.04	49.1	3,282	3,071
1858..	6,477	2.06	48.6	3,294	3,142
1859..	6,608	2.11	47.7	3,351	3,155
1860.....	6,451	2.05	48.8	3,225	3,186
1861.....	6,567	2.08	48	3,354	3,170
1862.....	5,505	1.75	57.2	2,831	2,650
1863.....	5,369	1.70	58.7	2,719	2,624
1864.....	4,753	1.68	61	2,439	2,264
1865.....	5,353	1.69	58.8	2,761	2,564
Total.....	53,523	27,286	25,826
Av. annual	5,947	1.88	52.9	3,032	2,869

Making a total number of births in nine years of 53,523, which exceeds the number of deaths for the same period by 14,073. Average annual number of births 5,947, which is 1,623 more than the average annual number of deaths for the same period.

The excess of births over deaths, was, in 1860, 2,554. In 1861, 2,529. In 1862, 669, but in 1863, the deaths exceed the births by 341, and in 1864, by 540. In 1865 the births again exceed the deaths by 495.

The number of births is 600 more than in 1864, and 1,098 less than in 1860. In this, as well as other states, there has been a marked decrease in number of births since 1860, until the present year, which exhibits an increase as compared with 1864. In Massachusetts the number of births for 1864 was 5,602 less than in 1860. In Connecticut births for 1864 were 2,200 less than in 1861; but the year 1865 shows an increase of 468 over the year 1864.

There is reported but one birth to 58.8 of population. In Massachusetts, last year, it was one to 40.25; in Boston one to 38.06; in Rhode Island, one to 47.5.

The following table shows the differences by counties, for the years 1860, '64 and '65, the number of births in each year, and the percentage of decrease.

Births by Counties for 1860, '64, '65, with per cent. of decrease.

Counties	1860.	1864.	1865.	Difference.	Percent.decrease.
Addison	457	305	364	93	20.35
Bennington.....	445	362	347	98	22.02
Caledonia.....	468	309	350	118	25.21
Chittenden.....	599	325	365	234	39.06
Essex.....	77	36	38	39	50.65
Franklin.....	562	408	467	95	17.08
Grand Isle.....	88	64	108	20	22.72
Lamoille.....	258	166	213	45	17.40
Orange.....	497	441	410	87	17.50
Orleans.....	358	234	292	66	18.43
Rutland.....	846	662	859	13	1.53
Washington.....	616	427	452	164	26.62
Windham.....	528	409	498	30	5.68
Windsor.....	652	605	590	62	9.50
Totals.....	6451	4753	5353	1098	17.51

It is seen that in all counties, except Bennington, Orange and Windsor, there is a gain as compared with last year, while in Grand Isle and Rutland the number of births is greater than in 1860.

Sex.—Two thousand seven hundred and sixty-one births of males, and 2,564 of females, are recorded for this year. Of twenty-eight the sex is not stated. Ratio, 1,077 males to 1,000 females; the same as for last year. Ratio for nine years, (1857–65) 1,055 to 1,000. In Connecticut the ratio for 1865 was 109.31 males to 100 females; for the last eleven years, 108.95 males to 100 females. In Rhode Island for ten years, 1,064 males to 1,000 females.

Of still born, the males, as usual, are in excess, 39 males to 23 females; sex not given of 11. Of illegitimates, contrary to the rule, males were in excess, 20 males to 17 females.

The following table shows the number of each sex, by counties, with ratio of males to females.

Counties.	M.	F.	M. to 100 F.	Counties.	M.	F.	M. to 100 F.
Addison.....	196	165	119	Lamoille.....	105	104	101

Grand Isle...	56	52	107	Windsor.....	301	286	105

Season.—The highest number of births occurs in May, 492, next, July and September, June and December; and the smallest in February.

The following table shows the number of births during the different quarters of the year 1865, and also during nine years, 1857–65, and the percentage of each. The number for the third quarter is largest, being slightly larger than the fourth quarter; and the first quarter is much less than the others.

PERIOD.	NUMBERS.		PERCENTAGE.	
	1857-65.	1865.	1857-65	1865.
Quarter ending March.....	11,875	1,179	22.03	22.02
Quarter ending June.....	13,135	1,388	24.76	26.13
Quarter ending September....	14,179	1,389	26.65	26.15
Quarter ending December.....	14,015	1,355	26.35	25.51

Plural Births.—Only 29 cases of plural births are reported, of which 36 were males and 22 females; a much smaller number than usual, being only one case in 184 of all births. In 1864, the number was 32, or one in 148 births. The number of twin births during nine years, (1857–65) is an average of 56 per year, or one to every 108 births. In Connecticut 123 cases of plural births are recorded for 1865, in an aggregate of 10,202 births, or one in 83. In Massachusetts, during nine years, the number was an average of one case to every 104 births. In Rhode Island, during twelve years, one in 97.5 births.

Illegitimates.—Thirty-nine cases of illegitimate births are

reported for this year. The number for 1864 was 32, and for 1863, 59 cases. The average number during nine years was 51, or one in 116 of all births. During the year 1865, the ratio was one to 137 of all births. Of these 20 were males and 17 females—of two, sex not stated. In Massachusetts, in 1864, there was one illegitimate birth to every 107 births. In Connecticut, in 1865, one to every 109 births.

Still born.—The number of still born reported for this year is 73, of which 39 were males, 23 females and 11 unknown, one still born in every 73 births.

Parentage.—Of the whole number of births, 3,680 or 68.65 per cent., are recorded as Americans—that is, born of American parents; 1,340, or 32.05 per cent. of foreign parents; and 333, or 6.21 per cent. unknown. According to the last census, the percentage of American and foreign population was 89.61 and 10.39; almost nine Americans to one foreigner, while the ratio of births is less than three to one.

During nine years (1857–65) the average percentage of births is as follows: American 67.86; foreign 20.41; unknown 11.73.

MARRIAGES.

The disturbing influence of the war upon society and social relations, has been evident during the last three years in the small number of marriages and births. So, as peace returns, already there follows an increase in the number of marriages. During the year 1865, the number of couples married was 2,569, an increase of 765 over the previous year, 440 more than the average number during nine years, and 254 more marriages than are recorded in any previous year.

The following table shows the number of marriages during each of the last nine years, with the ratio to population.

	1865.	1864.	1863.	1862.	1861.	1860.	1859.	1858.	1857.	1857-65. Average.
Marriages.....	2,569	1,804	2,007	1,962	2,188	2,170	2,169	2,315	1,941	2,129
Persons married...	5,158	3,608	4,014	3,924	4,376	4,358	4,338	4,630	3,882	4,238
Ratio to pop.....	61	87	78	80	72	73	73	68	81	74

In Connecticut 653 more marriages were registered during the year 1865 than during the previous year, and 174 more than for any previous year.

The ratio of marriages to population is one to 122, or one person married to 61 persons living. The average for nine years is one to 148, or one person married to 74 living. The greatest number took place in October and December, the least in April and June. There were 858 marriages in the fourth quarter of the year, 593 in the third, 586 in the first, and 503 in the second.

Of the 2,569 marriages, 1,326 were of bachelors to maids; 95 bachelors married widows; 166 widowers married widows; 216 widowers married maids, while of 766 the condition is not stated.

In 624 instances the bride was under 20 years of age; in 63, the groom was under 20, and in 46 instances both parties were under 20 years of age. Eighteen men were over 70 years of age, and one man over 70 married a maid under 20 years of age. Three hundred and eighty-two widowers were married, and 261 widows; 1,421 bachelors and 1,542 maids.

DEATHS.

The whole number of deaths registered for the year 1865 was 4,858, a decrease of 435 compared with last year, yet above the average for the last eight years, and greater than the number for any previous year recorded, except 1863 and 1864. In Connecticut the deaths registered for 1865, are 1,159 less in number than for 1864, a decrease of nearly 15 per cent,

The following table shows the whole number of deaths for nine years ending with 1865, with percentages and ratio of deaths to the living, and the average age of those who have died.

Years.....	1857	1858	1859	1860	1861	1862	1863	1864	1865	Each yr. average.
No. deaths.....	3,512	3,581	3,725	3,897	4,038	4,839	5,710	5,299	4,858	4,324
Per cent.....	1.111	1.135	1.182	1.237	1.282	1.535	1.818	1.711	1.541	1.390
Living to 1 death....	89	87	84	81	78	65	55	58	65	72
Average age.....	38.28	36.57	35.55	35.44	35.53	30.65	31.01	29.22	35.38	34.18

Average number of deaths annually, 4,324, or one to every 72 inhabitants; for 1865, one to every 65 inhabitants.

Age.—The ages are given of 4,710, leaving 158 as unknown. The average age is 35.38 years. It appears by the above table that during the three years, 1862–3–4, the average age of those dying was much less than usual, being but 30.29 years, while the average for five years previous (1857–61) was 36.47 years. The average age during nine years, was 34.18 years. It is to be remembered that these records do not include any who *died* outside the State of Vermont, in the army, or elsewhere.

The following table will show the number and percentage of deaths at the specified ages.

Deaths for 1865—Ages, Sex and Rates:

Ages.	M.	F.	Aggregate.	Per cent.	Living to 1 death.
Under 5 years.....	653	555	1208	24.86	26
5 to 10.....	118	132	250	5.14	37
10 to 15.....	97	169	266	5.47	145
15 to 20.....	124	153	277	5.7	82
20 to 30.....	214	254	468	9.63	72
30 to 40.....	160	180	340	6.96	102
40 to 50.....	140	147	287	5.90	103
50 to 60.....	153	176	329	6.77	118
60 to 70.....	259	194	453	9.32	54
70 to 80.....	258	240	498	10.25	19
80 to 90.....	192	151	343	7.06	10
Over 90.....	35	46	81	1.66	3
Unknown.....	63	67	130	2.67	

It appears that 24.86 per cent., or nearly one-fourth of all deaths, took place during the first five years, or were

under five years of age. In 1864, the proportion was nearly the same. In Massachusetts for 1864, the percentage was 37.05.

Sex.—The tables show that of all deaths there were males, 2,426, of females, 2,404; an excess of 22 males. In 1864, there was an excess of 245 males. The average for nine years is an excess of 40 females annually, or 98 males to 100 females. During the present year the ratio is 100.9 males to 100 females. In Connecticut the ratio is 107.22 males to 100 females.

Of deaths under five years of age for the year 1865, there were 118 males to 100 females; between 5 and 15, 71.42 males to 100 females; between 15 and 30, 80.6 males to 100 females; between 30 and 70, 102 males to 100 females. Over 70, there were 111 males to 100 females. Deaths of 58 persons are recorded between the age of 90 and 95, of whom 29 were males and 29 females. Twenty-three over 95 years of age, 6 males and 17 females.

Season.—The fatality by months and quarters differs from last year, but corresponds nearly with the average of other previous years. The order of months in fatality was September, August, October, November, March, July, December, April, May, February, June and January. The order by quarters was third, fourth, first and second.

Deaths by Quarters, Numbers and Rates.

Quarters.	1865.	1864.	1857-65.	Per ct. for 1865.	Per ct. for 1864.	Per ct. 1857-65.
First Quarter.....	978	1483	9142	20.14	28.45	23.6
Second Quarter.....	938	1286	8760	19.31	24.63	22.6
Third Quarter.....	1579	1383	10733	32.5	26.49	27.7
Fourth Quarter.....	1308	1084	10094	26.92	20.	26.06

Nativity.—An important item is neglected in preparing these records, in not giving the nativity of those who die.

The following table shows the fatality, by counties, with percentage of death to population. In some counties a deficiency in records gives a smaller ratio than properly belongs to them.

Counties.	No. deaths.	Per cent.	Counties.	No. deaths.	Per cent.
Addison.....	304	1.26	Lamoille.....	243	1.97
Bennington...	295	1.51	Orange.....	483	1.89
Caledonia....	400	1.86	Orleans.....	251	1.32
Chittenden...	282	1.00	Rutland.....	556	1.54
Essex.....	40	.69	Washington...	460	1.66
Franklin.....	293	1.07	Windham.....	450	1.66
Grand Isle....	47	1.09	Windsor.....	710	1.90

Percentage of deaths in whole State, 1.54. Average during nine years, 1857-65, 1.39. Average in Massachusetts during thirteen years 1852-64, 1.88. Rate in Massachusetts for the year 1864, 2.33.

CAUSES OF DEATH.

Of the 4,858 cases of death registered, 4,527 have specified causes, 93.18 per cent. The year 1865 has been free from any remarkable fatality from any form of disease. It is interesting to notice that since the year 1857, deaths from zymotic diseases had rapidly increased in number and percentage, until 1863, since when, they have decreased in nearly the same ratio, the number for the present year being 705 less than in 1863, and 477 less than last year. Constitutional diseases have varied very little in aggregate fatality during nine years, the average number, 1,013, being slightly less than the number for 1865. Local, developmental and violent causes of deaths, scarcely differ from the average of nine years in their results.

The table shows fatality from all classes of disease, with percentage of the whole for nine years.

Years.	ZYMOTIC.		CONSTITUTIONAL.		LOCAL.		DEVELOPMENTAL.		VIOLENT.	
	Deaths	Per ct.	Deaths	Per ct.	Deaths	Per ct.	Deaths	Per ct.	Deaths	Per ct.
1857..	627	19.26	1041	31.97	928	28.5	514	15.78	146	4.48
1858..	804	23.08	973	27.35	1013	29.07	570	16.36	124	3.46
1859..	960	26.06	1027	27.86	993	26.94	575	15.59	131	3.55
1860..	933	25.54	1088	29.78	1054	28.85	432	11.83	146	4.00
1861..	1085	28.62	1025	27.03	1025	27.03	520	13.71	136	3.58
1862..	1879	41.20	967	21.23	1053	23.11	478	15.49	178	3.91
1863..	2584	48.44	1046	19.61	1096	20.54	434	8.13	164	3.07
1864..	2176	44.48	928	18.97	1132	23.14	393	8.03	262	5.37
1865..	1799	39.96	1024	22.61	1108	24.47	447	9.87	149	3.28
'57-65	1429	32.93	1013	23.42	1045	24.17	495	11.44	159	3.69

It is seen that the actual number of deaths has changed but little from year to year, except in the class of zymotic disease. During the war the number of violent deaths was above the average, but as these records only include such as die in this State the number is small.

Dysentery and Fever were more fatal than last year, and Diphtheria, Croup, Scarlatina and Measles much less so.

CLASS I.—Zymotics.—The entire number of deaths registered from this class of causes is 1,799, or 39.96 per cent. of all deaths. Last year it was 2,176, or 44.48 per cent. Average for nine years, 1,429, or 32.93 per cent. In Connecticut the percentage was, for 1865, 30.55. For 1864, in this State, it was 31.90, and the average for six years, 1859-65, was 30.32. In Massachusetts the average for five years, 1860-4, was 29.98.

Diphtheria.—The number of deaths from this disease, for the year 1865, was 371, or 8.19 per cent. of all deaths. Last year the number was 843, or 17.21 per cent., while in 1863 the large number of 1,225, or 22.96 per cent., is recorded. Of these 167 were males and 204 females. An excess of females has usually been noticed in deaths from diphtheria. Last year, of 843 deaths, 392 were males and 451 females. The whole number of deaths registered as having

died of diphtheria in this State, since the disease was first known, is 3,980, of whom 1,830, or 45.97 per cent., were males and 2,150, or 54.03 per cent., females.

Of the 371 deaths for this year, 129, or 35 per cent., were under five years of age; 227, or 61 per cent., were under ten years of age. The importance of all records of this fatal disease is sufficient reason for again presenting a table showing fatality by counties, since its first prevalence in 1858.

Counties.	1858.	1859.	1860.	1861.	1862.	1863.	1864.	1865.

Totals.....	13	60	212	441	818	1225	843	371

Scarlatina.—Only 49 deaths occurred from this disease, 27 males and 22 females, a much smaller number than during any previous year, the average during nine years, 1857–65, being 186 per year.

Croup.—Thirty-nine deaths, 21 males and 18 females, are recorded, as caused by Croup. In 1864, the number was 76, and 88 for 1863. The average annual number for nine years, 1857–65, is 66 deaths. Of the 39 deaths, 34 were under five years of age, and all under ten years. The most fatal months were February, March and October.

Typhoid Fever.—If, under this name be included those reported as Bilious, Nervous, Congestive, Camp and Typhus Fevers, the number of deaths is 535, or 11 per cent. of all deaths; 259 were males and 276 females. This number is

much larger than for any previous year recorded, except 1863, when the number was 559. The average number annually for nine years, 1857-65, is 295, or 6.79 per cent. of all deaths. In Connecticut, the percentage for the year 1865 was 7.79 of deaths from ascertained causes. The age at which fever most prevails is from 10 to 20 years, the number for this year being 123, or 23 per cent. Between the ages of 20 and 30, 106, or 19.81 per cent. Between the ages of 30 and 40, 61, or 11 per cent. During the next three decades the number is nearly equal, being slightly over 10 per cent. for each decade. Forty-two deaths are recorded as under the age of 5 years, and 15 as over 80 years of age. The most fatal months were October, September, August, November and July, while in the remaining seven months, only 100 cases occurred. More than one-half of all deaths took place during the three months first named.

Spotted Fever is given as the cause of 29 deaths against 149 last year.

Dysentery.—This disease has prevailed to an unusual extent, being nearly equally distributed among the different counties in the State. Five hundred and three deaths are recorded, of whom 236, or 46.91 per cent. were males, and 267, or 53.09 per cent. were females. This is a larger number than ever before recorded, being 11.55 per cent. of all deaths; 333 more than last year, and 403 more than the average for eight years previous to 1865. The average annual number for nine years, (1857-65) is 145 or 3.36 per cent. Two hundred and seventy-one, or 53.88 per cent. were under 5 years of age; 40, or 7.95 per cent. were between 5 and 10 years of age, 34, or 6.5 per cent. between 50 and 60 years of age, and the same number between 60 and 70 years. Only 41 deaths, 8 per cent., occurred between the ages of 10 and 40 years. Only 16 deaths took place in the first six months of the year; in July, 35, August 157, September, 191, October, 79, and in the last two months 25.

Diarrhœa.—Eighty cases of death are recorded, or 26 of *Diarrhœa*, and 54 of *Chronic Diarrhœa*, of which 61 were males and 19 females. The excess of males show that many were returned soldiers. *Cholera Infantum* is said to have caused 72 deaths; 37 males and 35 females. *Cholera Morbus* 16 deaths, 10 males and 6 females. Besides these, 63 deaths, 39 males and 24 females are said to have been caused by "*Disease of the Bowels*," and 15 by "*Gastritis*," both of which causes should, doubtless, be included among zymotic diseases as *diarrhœa* or *cholera morbus*; though possibly some were local inflammation of abdominal viscera.

Erysipelas is recorded as the cause of deaths in 29 instances.

Measles was fatal in only two cases, *Small Pox* in 8, and *Whooping Cough* in 10 cases.

Seven persons are registered as having died of "*Privation*," 3 of them from "*Starvation*," and others from "*Want of Care*"; 6 were males and one female. It is probable that they had returned from rebel prisons.

CLASS II.—*Constitutional Diseases*.—Of all deaths from specified causes, 1024, or 22.61 per cent. were from diseases of this class. In 1864 the number was 928, or 18.97 per cent. The average for nine years has been 1013, or 23.42 per cent.

The second order of this Class, *Tubercular*, including *Consumption*, *Scrofula*, *Hydrocephalus* and *Tubes Mesenterica*, embraces the principal fatal diseases of this class. The number of deaths from *Consumption* for this year was 766, of whom 313 were males, and 453 females, a percentage of all deaths of 16.92 per cent. Last year the number was 690, or 12.06 per cent.

The following table shows the number and percentage of deaths from *Tubercular Consumption* during nine years, (1857-65,) with the number of living to one death.

Deaths from Consumption, with percentage and ratio of Living.

	1857.	1858.	1859.	1860.	1861.	1862.	1863.	1864.	1865.	Average 1857-65.

Pr. ct. of all....	25.83	22.73	22.24	23.71	22.02	17.45	15.86	14.98	17.69	18.82	18.82
Death to 1 living	370	397	384	364	389	401	372	429	393	388	388

Very little difference is observed in the fatality of different seasons of the year. Up to the age of 10 years and over 70, the fatality is greatest of males. Between the ages of 10 and 40 the record is 193 females to 100 males. And between these ages occurred 47.39 per cent. of all deaths by consumption. It is seen that during nine years, (1857-65) all deaths from *Tubercular* causes amount to one to every 388 persons living, and to 18.82 per cent. of all deaths.

In Connecticut for the year 1865, deaths from consumption were 15.74 per cent. of all deaths, and one to every 415 persons living.

In Massachusetts for nine years, (1856-64) the average percentage of deaths from this cause was 19.79 per cent. of all deaths; one death to every 260.2 persons living.

Dropsy was the cause of death in 108 instances, 53 males and 55 females. Last year the number was 82.

Cancer is recorded as the cause of 84 deaths, 43 males and 41 females. Of these, 14 were of the *stomach*, 5 of the *breast*, 3 of the *womb* and 4 of the *face*. Last year the number was 68, and the average number for nine years is 63.

CLASS III.—*Local Diseases*.—The most fatal order of this class is the first, or *Diseases of the Nervous System*, which is recorded as the cause of death in 398 cases, or 8.79 per cent. of all deaths. An increase of 44 as compared with last year. Of these 128 are recorded as *Disease of Brain*, 29 *Meningitis*, and 7 *Cephalitis*, making 164 cases as probably due to inflammation in some form, within the cranium. Of these 92 were males and 72 females. *Apoplexy* is charged with 60 deaths, *Paralysis* with 87, making 147 deaths which may probably be properly named *apoplexy*, or nearly all of them. *Convulsions*, *Epilepsy* and *Fits* are found to have caused 71 deaths. Of the 16 by convulsions, 14 were under 5 years of age. Of the 43 said to have been caused by *Fits*, 25 were under 5 years, and should be included under *Convulsions*. Of these, 38 were males and 33 females.

Next in fatality is the order of *Diseases of the Respiratory Organs*, which includes 325 deaths, or 7.17 per cent. of all deaths. Of these 202 are called *Pneumonia*, 95 *Congestion of the Lungs*, and 12 *Disease of the Lungs*, and probably may properly all be called *Pneumonia*, making 309 deaths from this cause, 142 males and 167 females. Of these 67, or 21.68 per cent. were under 5 years of age, and 78, or 36.57 per cent., over 60 years of age, leaving 129, or 41.75 per cent. between the ages of 5 and 60 years. The largest number of deaths occurred in the months of March and February amounting to 101 deaths, or 32.68 per cent., and 57 per cent. of the deaths were during the first five months of the year.

The order of *Disease of Organs of Circulation* exhibits 165 deaths; 164 of the heart, and one of arteries. Of these 100 were males and 65 females, and 109, or 66 per cent., were over 50 years of age.

CLASS IV.—*Developmental Diseases*.—The order of *Diseases of Children* gives 123 deaths, or 2.71 per cent. Of these 73 were still born, 39 males, 23 females, and 11 not stated. *Infantile Diseases* (?), 35 deaths, teething 12.

Diseases of Old People are registered as the cause of 256 deaths, or 5.65 per cent; 126 were males and 130 females. Only 5 were under 70 years of age.

CLASS V.—*Violent Deaths*.—It is computed that out of 2,713,240 persons in the United States who will be so seriously injured by accidents as to disable them for one or more weeks during the year, 17,000 will die. One hundred and twenty-one are registered as death by accidents during the year 1865, and at the above ratio there would have been 19,312 serious accidents, or persons injured by accidents. More than eighteen deaths by *railroad accidents*, all males; 25 were *drowned*, 23 males and 2 females, and 13 died from *burns and scalds*.

Suicide.—The number of deaths by this cause recorded is 18. Of these 4 were by cutting the throat, 7 by hanging, and 7 by means not specified. The whole number of suicides during nine years, (1857–65,) is 155, or an annual average of 17. Of these there have been 70 by hanging, 58 males and 12 females; 25 by poisoning; 17 by cutting the throat, 15 males and 2 females; 10 by drowning, 5 by gun shot wounds, 1 by strangulation. In the tables, the modes of committing suicide are included among accidents, and the sex can not be determined of each separately, but so far as ascertained, the summary is, males 103, females 35, which is probably less than the proper proportion of females. In Massachusetts, for five years the ratio is 309 males to 100 females. In France, for 23 years, 310 males, 100 females.

APPENDIX.

CLASSIFICATION OF DISEASES.

The following classification of the Causes of Death has been adopted for the Vermont Registration Reports, in order that they may conform as nearly as possible with those of other countries, thereby securing to them much greater value for the comparison of facts, both at home and abroad. It is that recommended by William Farr, Esq., M. D., of England, with the sanction and approval of the most eminent medical men of Europe, and adopted in Massachusetts, and will probably be used by many other states, as well as upon the European continent.

CLASSES.

I.—ZYMOTIC DISEASES :—*Zymotici*. (*Zume*, leaven.)

Diseases that are either epidemic, endemic, or contagious; induced by some specific body, by want of proper nourishment, or by the bad quality of food.

II.—CONSTITUTIONAL DISEASES :—*Cachetici*. (*Kachexia*, bad habit of body.)

Sporadic diseases; affecting several organs in which new morbid products are often deposited; sometimes hereditary.

III.—LOCAL DISEASES :—*Monorganici*. (*Monos*, alone, without others: *Organon*, organ.)

Sporadic diseases, in which the functions of particular organs or systems are disturbed or obliterated, with, or without, *inflammation*; sometimes hereditary.

IV.—DEVELOPMENTAL DISEASES :—*Metamorphici*. (*Metamorphasis*, change of form.)

Special diseases, the incidental result of the formative, reproductive, and nutritive processes.

V.—VIOLENT DISEASES OR DEATHS :—*Thanatici*. (*Thana-
toi*, violent deaths.)

Diseases which are the evident and direct results of physical or chemical forces, acting either by the will of the sufferer, of other persons, or accidentally.

ORDERS.

- Class I.—Order 1. Miasmatic diseases :—*Miasmatici*. (*Miasma*, stain, defilement.)
 2. Enthetic diseases :—*Enthetici*. (*Enthetos*, put in; implanted.)
 3. Dietic diseases :—*Dietici*. (*Diaita*, way of life; diet.)
 4. Parasitic diseases :—*Parasitici*. (*Parasitos*, parasite.)
- Class II.—Order 1. Diathetic diseases :—*Diathetici*. (*Diathesis*, condition; diathesis.)
 2. Tubercular diseases :—*Phthisici*. (*Phthisis*, wasting away.)
- Class III.—Order 1. Brain diseases :—*Cephalici*. (*Kephale*, head.)
 2. Heart diseases :—*Cardiaci*. (*Kardia*, heart.)
 3. Lung diseases :—*Pneumonici*. (*Pneumon*, lung.)
 4. Bowel diseases :—*Enterici*. (*Enteron*, intestine.)
 5. Kidney diseases :—*Nephritici*. (*Nephros*, kidney.)
 6. Genetic diseases :—*Aidoici*. (*Aidoia*, pudenda.)
 7. Bone and Muscle diseases :—*Myostici*. (*Mus*, muscle; *Osteon*, bone.)
 8. Skin diseases :—*Chrotici*. (*Chros*, skin.)
- Class IV.—Order 1. Developmental diseases of children :—*Paidiaci*. (*Paidia*, youth.)
 2. Developmental diseases of women :—*Gyniaki*. (*Gune*, woman.)
 3. Developmental diseases of old people :—*Geratici*. (*Geras*, old age.)
 4. Diseases of nutrition :—*Atrophici*. (*Atrophia*, atrophy.)

-
- Class V.—Order 1. Accident :—Tychici. (*Tuche*, chance.)
2. Battle :—Polemici. (*Polemos*, battle ; fight.)
3. Homicide :—Androphonici. (*Aner*, man ; *Phoneuo*, I kill.)
4. Suicide :—Autophonici. (*Autos*, self ; *Phoneuo*, I kill.)
5. Execution :—Demiōtici. (*Demiotes*, executioner.)

LAW OF THIS STATE

RELATING TO THE REGISTRY AND RETURNS OF BIRTHS, MARRIAGES AND DEATHS.

AN ACT RELATING TO THE REGISTRY AND RETURNS OF BIRTHS, MARRIAGES AND DEATHS.

SEC. 1. The clerks of the several towns of this State shall, annually, in the month of June, transmit to the Secretary of State a certified copy of their record of births, marriages and deaths, which have occurred in their respective towns during the year next preceding the first day of January. The births shall be numbered and recorded in the order in which they are received by the clerk. The record of births shall state in separate columns the date of the birth, the name of the child, (if it have any,) the sex of the child, the place of birth, name and surname of one or both the parents, residence of the parents, occupation of the father, and the time when the record was made. The marriages shall be numbered and recorded in the order in which they are received by the clerk. The record of marriages shall state in separate columns the date and place of marriage, the names and surnames of the groom and bride, the residence of each at the time of marriage, the age of each, occupation of the man, and time when the record was made. The deaths shall be numbered and recorded in the order in which they are received by the clerk. The record of death shall state in separate columns the date of the death, the name and surname of the deceased, the sex, condition, (whether married or single,) age in years, months and days, the place of death, the disease or apparent cause of death, the occupation, if a male over fifteen years of age, the place of birth, the name of the parents, and the time when the record was made.

SEC. 2. The clerks in the several school districts in each town shall annually, in the month of February, ascertain, from actual inquiry or otherwise, all the births and deaths which have happened in their respective districts during the year next preceding the first day of January, together with such facts concerning the births and deaths as are required by the preceding section of this chapter, and shall make an accurate return thereof to the clerk of the town in which such school district is situated, on or before the first day of March; and the district clerk or other person or persons authorized to perform his duties and make such returns, shall be entitled to receive from the treasury of such town five cents for each and every birth and death so returned. And if such person shall neglect or refuse to make the returns required by this section, he shall be liable to a fine of not less than five dollars for each neglect or refusal.

SEC. 3. Every justice of the peace or minister of the gospel shall make a record of each marriage solemnized before him, and every clerk or keeper of records of the meetings wherein any marriage among the people called Friends, or Quakers, shall be solemnized, shall make a record of such marriage, together with all the facts relating to marriages required by the first section of this chapter; and such justice, minister or clerk, shall annually, in the month of February, or from time to time, return a copy of the record for the year next preceding the first day of January, to the clerk of the town in which the marriage was solemnized; and every such person who shall neglect or refuse to make the returns required by this section, shall be liable to a fine of not less than ten dollars for each neglect or refusal, to be recovered on the complaint of a grand juror of such town.

SEC. 4. The clerk of each town shall be entitled to receive from the treasury of the town five cents for recording each birth, death and marriage; provided, said clerk shall comply with the provisions of this chapter in all respects.

TENTH REPORT
TO THE
LEGISLATURE OF VERMONT,
RELATING TO THE
REGISTRY AND RETURNS
OF
Births, Marriages, and Deaths,
IN THIS STATE,
FOR THE
YEAR ENDING DECEMBER 31st, 1866.

PREPARED UNDER THE DIRECTION OF
GEORGE NICHOLS, Secretary of State.

RUTLAND:
TUTTLE & CO., PRINTERS.
1868.

IN SENATE, November 12th, 1867.

On motion of Mr. Bullard; The Annual Report of the Secretary of State, of the Births, Marriages, and Deaths, for the year ending December 31st, 1866, was

Ordered to lie; and the Secretary directed to procure the printing of one thousand copies for the use of the General Assembly.

HENRY CLARK,
Secretary.

REPORT.

STATE OF VERMONT.

OFFICE OF SECRETARY OF STATE, }
NORTHFIELD, Oct. 1st, 1867. }

To the Honorable, the General Assembly of the State of Vermont :

In compliance with the laws of this State, I have the honor to transmit herewith, the Tenth Annual Report, relating to the Registry and Returns of Births, Marriages, and Deaths, that have occurred in Vermont during the year ending December 31st, 1866.

The importance of accuracy and thoroughness in the present system of Registration has too often been alluded to, to need repetition. Much labor and great care have been employed, upon the part of the Compiler, to render the present volume *all* that its warmest friends can desire. Indeed, unless the work, both upon the part of the Recording Officer in making the original returns, and upon the tables and abstracts here compiled—be *well* done, it can possess little or no comparative value. Accordingly, any failure or neglect upon the part of Town Clerks to render full and complete returns is carefully noted, and a correction of the delinquency secured, so far as is practicable.

A great draw-back upon the accuracy of our present system of Registration lies in the want of authority, compelling full and accurate returns to be made to the Town Clerks, and by them transmitted to this office. Under the present system, facts pertaining to each branch of Registration are loosely and imperfectly collected, by reason of the inefficiency or neglect of District Clerks, and until this authority and obligation to compel perfect returns to be made, is delegated to the Town Clerks, who, it naturally seems, should be the proper persons for such duty, no way suggests itself for greater thoroughness and value than by a continuance of the steady, persistent efforts hitherto employed to that end.

Agreeably to an act of the Legislature, approved November 15th, 1866, requiring the tabulation and publication of all the Divorces granted in this State for the last five years, ending December 31st, 1866, blank sheets for proper returns of such facts as might be of interest, were prepared and forwarded to the several County Clerks of the State, and the result of such returns and compilation is herein contained.

The summary of remarks deduced from the different tables and statistics embraced in this report, is from the pen of Oscar F. Fassett, M. D., of St. Albans, who, for the last few years, has ably performed that laborious duty without fee or reward, and to whom the gratitude of the State is eminently due.

Respectfully submitted,

GEORGE NICHOLS,
Secretary of State.

CONTENTS.

TABLES.

I. GENERAL ABSTRACTS,—Population in 1860, Births, Marriages and Deaths, registered in each town, distinguishing the sex and parentage of Births, the nativity of Marriages, the sex, aggregate and average ages, and the percentage of Deaths,	2-17
<i>Recapitulation of General Abstracts,</i>	18-19
II. BIRTHS,—showing the number of each sex, in the several counties, during each month,	20-21
A. <i>Supplement.</i> —Plurality Births, by counties, by months and by sex,	22
B. <i>Supplement.</i> —Illegitimate Births, by counties, by months, and by sex,	23
III. MARRIAGES,—by counties and by months,	24
IV. PERSONS MARRIED,—By ages, and by conjugal conditions,	25-27
V. DEATHS,—by counties, by months and by sex,	28-29
VI. DEATHS ACCORDING TO AGE,—showing the number of each sex at different ages, in each town and county, with the population and percentage,	30-59
<i>Recapitulation of Deaths according to age,</i>	30-61
VII. CAUSES OF DEATH,—Alphabetically arranged—showing the number of each sex, dying at different ages, during the several months of the year, with the causes of death,	62-71
VIII. CLASSIFICATION OF THE CAUSES OF DEATH,—by counties, with the totals and percentage,	72-78
IX. OCCUPATIONS,—showing the number of those pursuing different avocations, the number of deaths in each, the ratio of the living, and the aggregate and average ages of those dying,	79-80
X. EXHIBITING the number of Divorces granted by the Supreme Court, during the last five years, ending December 31st, 1866, with the causes thereof; also the number of marriages in each year, and the ratio of divorces to marriages,	81-87
XI. RECAPITULATION OF DIVORCES,—grated during the five years ending December 31st, 1866,	86-87
XII. EXHIBITING the number of Divorces granted during the five years, ending December 31st, 1866, arranged by counties, with special reference to the Libellant in each case, and the causes therefor,	88-89

REMARKS.

Accuracy of returns,
Value of the Reports in relation to Science,
Negligence of medical men in making proper returns,
Delinquent towns in 1866,
Divorces,
Comparison of Births, Marriages and deaths with previous years,

POPULATION.

Condition of the State in regard to its population,
Ratio of native and foreign population,
Effects of the war upon our population,

BIRTHS.

Whole number for 1866,
Table of births, aggregate for ten years, with the annual birth rate, mean birth rate, and sex,
Increase of births in this State,
Sex; ratio of males to females,
Table showing each sex by counties, and the ratio of males to females, Season,
Plurality births,
Illegitimates,
Stillborn,

PARENTAGE.

Ratio of native to foreign parentage,
Table giving the number of births during the year, by counties, with the number of inhabitants to one birth and the parentage,

MARRIAGES.

Whole number in 1866,
Table giving comparison with former years, and the average for ten years,
Social condition of parties marrying,

DEATHS.

Whole number in 1866,
Table showing the whole number for the last nine years, with the percentage and the ratio of the living to the dead of 1866,	{
Average number of deaths annually,	{
Number of dead whose ages are given,	{
Average age of those dying,	{
Table showing the deaths for 1866, with ages, sex and rates,	{
Ratio of males to females dying,	{
Seasons,
Nativity,
Percentage of deaths by quarters,

CAUSES OF DEATHS.

Causes of death—General Remarks,	98
Table showing the fatality from all classes of disease, with a percentage of the whole during ten years,	99

Zymotica.

Whole number for 1866,	99
Diphtheria, decrease of deaths from this cause, from preceeding years,	99
Scarlatina,	99
Croup,	99
Typhoid fever,	100
Dysentery,	100
Diarrhœa, Whooping Cough, Cholera Infantum, Erysipelas, and Puerperal Fever,	100
Intemperance and Delirium Tremens,	100

Constitutional Diseases.

Whole number of deaths from this class,	100
Fatal diseases of this class,	100
Dropsy and Cancer,	100
Consumption, its fatality,	101
Table showing the deaths from Tubercular Diseases, with percentage of all deaths, and rate to living,	101

Local Diseases.

Diseases of Respiratory Organs,	101
Ratio of deaths from this class of diseases, to the whole number dying,	101
Nervous Diseases—their ratio of fatality,	101
Organs of Circulation,	101

Developmental Diseases.

Diseases of Children,	102
Diseases of Old People,	102

Violent Deaths.

Whole number for 1865, and their percentage,	102
Suicide, whole number of deaths by	102

APPENDIX.

Classification of Diseases,	103-104
Statistical Nosology,	105-108
Laws of this State relative to the Registry and returns of Births, Marriages and Deaths,	109-112

REMARKS.

The tables constituting the Tenth Annual Registration Report of Births, Marriages and Deaths, for the State of Vermont, for the year ending December 31st, 1866, are apparently very nearly accurate. They exhibit a marked improvement upon the last year's report, which far surpassed that of any previous year. The importance of registration is everywhere being more felt and appreciated, and systems are adopted for thoroughly carrying it into effect. Vermont was among the first States to publish these reports, which are now established in many States as permanent systems of registration.

The tables of the present report contain returns from all of the towns in the State, except four small towns containing an aggregate population of only 2,127 persons.

From eight other towns the returns are evidently but partial and incomplete, viz: Barton, Barnet, Enosburgh, Coventry, Franklin, Fairhaven, Guildhall and Vergennes.

From all the remaining towns of the State, the returns are only incomplete with respect to *Causes of Death*, which, in many instances are imperfectly, or incorrectly given, as must continue to be the case, until physicians can be induced to make these returns.

An important addition has been made, by the Secretary of State, to the present report, consisting of a record of the number of divorces granted by the Supreme Court in the several counties of the State, during each and all of the last five years, with the causes therefor, and the ratio of divorces to marriages.

The tables show that during the year ending December 31st, 1866, the whole number of births was 6,532; of which 3,376 were males, and 3,113 were females; of 43 the sex is not stated.

Marriages were 3,001 couples, or 6,002 persons, a number greater by 432 couples, or 864 persons than ever before reported.

Deaths were 3,841, of whom 1,897 were males, and 1,921 females; of 23 the sex is not stated.

Compared with the year 1865, the number of births is greater by 1,179, and greater than in any year since 1861.

The number of marriages is greater by 432, or 864 persons, than during the year 1865; and greater by 686, or 1,372 persons, than in the year 1864.

The number of deaths is 1,017 less than during the year 1865.

Compared with 1860, (before the war,) the number of births is greater by 81. Marriages greater by 822, or 1,644 persons; and deaths less by 56.

Compared with 1864, the number of births is greater by 1,779. Marriages greater by 1,197, or 2,394 persons. Deaths less by 197.

Compared with the average of nine years, (1857-65,) the number of births is greater by 585; marriages greater by 872, or 1,744 persons; deaths less by 483.

Estimating the population at 315,098, there was, during the year 1866, one birth to every 48.2 of inhabitants. One person out of every 50.8 was married during the year, and one death to every 63 persons living.

The average number of births daily was 17.62; of marriages, 9.43; of deaths, 10.52.

Average age of those who died was 38.48 years. Average age during ten years, (1857-66,) was 35.66. Average age during three years, (1862-4,) was 30.29 years. Average age of those who died during seven years of the last ten, excluding the years 1862-4, was 36.60 years.

The total number of divorces granted, by the Supreme Court of this State, during the year 1866, was 155, or one to every nineteen marriages. The whole number for five years, (1862-6,) was 571, or an average of one divorce to every twenty marriages.

POPULATION.

At the last census in 1860, the population of Vermont was 315,098, of whom 158,786 were males, and 156,312 were females. Of these 282,335 were of American birth, of whom 141,299 were males, and 141,036 were females. Of foreign birth, and born of parents who were foreigners, there were 32,743, of whom 17,487 were males, and 15,256 were females. As no census has been taken since 1860, we

have no other data for calculations upon population. It is very probable that the population has changed both in actual numbers and in the proportion of Americans and foreigners, during the last six years, including, as this period does, the revolutionizing effects of the rebellion.

The importance of a State census at less than decennial periods of time, commends itself to the attention of the legislators of the State.

BIRTHS.

The whole number of births for the year 1866, was 6,532. The number for the last ten years is as follows :

Years.	Whole No.	Birth rate.	Pop. to 1 birth	Male.	Female.
1857.....	6,412	2.04	49.1	3,282	3,071
1858.....	6,477	2.06	48.6	3,294	3,142
1859.....	6,608	2.11	47.7	3,351	3,155
1860.....	6,451	2.05	48.8	3,225	3,186
1861.....	6,567	2.08	48.	3,354	3,170
1862.....	5,505	1.75	57.2	2,831	2,650
1863.....	5,369	1.70	58.7	2,719	2,624
1864.....	4,753	1.68	61.	2,439	2,264
1865.....	5,353	1.69	58.8	2,761	2,564
1866.....	6,532	2.07	48.2	3,376	3,113
Total,....	60,055	30,662	28,939
Aver. annual..	6,005	1.91	52.45	3,066	2,894

Making a total number of births in ten years of 60,055, which exceeds the number of deaths for the same period by 16,764. The average annual number of births is 6,005, which is 1,730 more than the annual number of deaths for the same period. The excess of births over deaths, for the year 1866, is 2,691, or 58.8 deaths to every 100 births. The average for ten years, (1857-66,) is 71.19 deaths to 100 births. In Massachusetts, the average for ten years, (1855-64,) is 68.58 deaths to 100 births.

Sex.—In the returns for this year, the ratio of males to females is larger than usual, being 3,376 males to 3,113 females, or 1,081 males to 1,000 females. Of 43 the sex is not stated. The ratio for last, year was 1,077 males to 1,000 females. Ratio for ten years, (1857-66,) is 1,059 males to 1,000 females.

The following table shows the number of each sex by counties with ratio of males to females.

Counties.	M.	F.	M. to 100 F.	Counties.	M.	F.	M. to 100 F.
Addison,...	258	220	117	Lamoille,...	135	131	103
Bennington,	252	212	119	Orange,....	225	206	109
Caledonia,..	220	225	98	Orleans, ...	196	187	104
Chittenden,.	350	305	115	Rutland, ...	503	421	119
Essex,	24	20	120	Washington.	281	262	108
Franklin,...	282	291	97	Windham,..	223	233	95
Grand Isle,.	48	56	86	Windsor,...	379	344	110

Season.—The largest number of births occurs in September; next in order are August, May, November, October and December. The smallest number is in January.

The number for the third quarter is largest, and the first quarter is much less than either of the others.

The following table shows the births during the different quarters of the year 1866, and also during ten years, (1857-66,) with the percentage of each:

PERIODS.	NUMBERS.		PERCENTAGE.	
	1857-66	1866.	1857-66.	1866.
Quarter ending March,....	13,127	1,252	22.03	19.29
Quarter ending June,.....	14,751	1,616	24.76	24.94
Quarter ending September.	16,022	1,842	26.74	28.44
Quarter ending December..	15,784	1,769	26.47	27.32

Plural Births.—Sixty-six cases of plural births are recorded, of which 71 were males, and 61 females. This is one to every 98 of all births. In 1865, the number was 29, or one to every 184 births. In 1864, 32, or one to every 148 births. The number of plural births during ten years, (1857-66,) was an average of 57 per year, or one to every 105 births.

Illegitimate.—Forty cases of illegitimate births are recorded for this year. Of these 19 were males, 20 females and of one the sex is not stated. This is one to every 163 births. In 1865, the number was 39. During ten years, (1857-66,) the average annual number was 50, or one to every 120 of all births.

Still born.—The number recorded is 90 cases, or one to every 72 births. For obvious reasons, this is greatly under the true number.

Parentage.—Of the whole number of births, 4,376, or 66.97 per cent. are recorded as of American parentage; 1,724, or 26.39 per cent. of foreign parentage, and 432, or 6.63 per cent. are recorded as "Unknown." The average for ten years, (1857–66,) has been as follows: American births, 67.77 per cent.; Foreign, 21. per cent., and "Unknown," 11.23 per cent.

The following table gives the number of births during the year, by counties, with the number of inhabitants to one birth and the parentage:

COUNTIES.	Total.	Am.	For.	Un.	Pop. to 1 birth.	Per cent of American.	Per cent of Foreign.
Addison,	489	309	148	23	50	64.37	30.83
Bennington,	466	324	120	21	42	69.52	24.8
Caledonia,	453	341	73	39	47	75.27	16.11
Chittenden,	662	318	287	57	42	48.	43.35
Essex,	45	41	1	3	81	91.11	2.22

Windsor,	726	588	97	41	51	81.	13.36
Total,	6,532	4,376	1,724	432	Average 52.45	Average 66.97	Average 26.39

MARRIAGES.

The number of marriages recorded for the year 1866, is 3,001, or 6,002 persons. This is an increase of 432 marriages over the number for any previous year, and 781 more than the average for the last ten years.

Of these 6,002 persons married, 3,442 are recorded as Americans; 549 as Foreigners, and 2,011 as Unknown.

The following table shows the number of marriages during each and all of the last ten years, with the ratio to population:

YEARS.	1857	1858	1859	1860	1861	1862	1863	1864	1865	1866	Total. 1857–66.	Average 1857–66.
Marriages,	1941	2315	2169	2179	2188	1962	2007	1804	2569	2001	22,135	22.14
Number of Persons,	2882	4630	4338	4358	4376	3924	4014	3608	5138	6012	44,270	44.28
Ratio to Population,	81	68	73	72	72	80	78	87	61	52	7	71.
Americans,	1812	2764	2646	2858	3074	2818	2674	2316	2948	2442	37,352	37.35
Foreign,	299	392	394	380	376	332	430	272	464	549	3,879	3.88
Unknown,	1780	1474	1298	1120	926	774	910	1020	1726	2011	16,039	16.04

It is evident that greater care should be used to ascertain the nativity of those married. The greatest number of marriages took place in October, November and January. The least is August, July and June.

There were 784 marriages in the first quarter of the year; 606 in the second; 640 in the third, and 933 in the fourth.

The ratio of marriages to population is one to 104, or one person married to every 52 persons living. The average for ten years is one to 142, or one person married to 71 living.

Of the 3,001 marriages, 1,636 were of bachelors to maids; 118 bachelors married widows; 178 widowers married widows; 277 widowers married maids, and of 792 the condition is not stated.

In 765 instances, the bride was under 20 years of age; in 85 the groom was under 20, and in 62 instances, both parties were under 20 years of age; 17 men were over 70 years of age. Four hundred and fifty-five widowers, 296 widows, 1,754 bachelors and 1,913 maids were married.

DEATHS.

The whole number of deaths for the year ending December 31st, 1866, was 3,841, which is 1,017 less than during the year 1865, and 483 less than the average during eight years, (1858-65,) and 434 less than the average during ten years, (1857-66.)

The following table shows the whole number of deaths during ten years, with percentages and ratio of deaths of the living, and the average age of those who have died:

YEARS.	1857.	1858.	1859.	1860.	1861.	1862.	1863.	1864.	1865.	1866.	Total. 1857-66.	Average 1857-66.
No. Deaths,	3512	3581	3725	3897	4038	4836	5710	5293	4858	3841	43,291	4,329
Per centage,	1111	1135	1152	1237	1282	1535	1815	1711	1541	1212	1,313
Liv. to 1 death, ...	89	87	84	81	78	65	55	58	65	82	73
Average age, ...	38.38	36.57	36.55	35.44	35.53	30.65	31.01	29.22	35.38	38.48	34.62

Average number of deaths annually 4,329, or one to every 73 of inhabitants; for the year 1866, one death to every 82 inhabitants.

Age.—The ages are given of 3,742 of those who died during the year, leaving 99 whose age is unknown. The average is 38.48 years, being greater than during any previous year. The average age during ten years, (1857-66,) was 34.62 years. This average is

made much less by the reduced age during three years of the rebellion, (1862-4,) when the average was only 30.29 years.

Table showing the number and percentage of deaths at the specified ages, with the ratio to the living at each period.

Deaths for 1866.—Ages, Sex and Rates.

Ages.	Male.	Female	Aggregate.	Pr. Cent.	Living to 1 Death.
Under 1 year,.....	303	240	562	14.63	12
1 to 5 years,.....	203	168	373	9.71	82

80 to 90,.....	176	178	354	9.22	8
Over 90,.....	31	32	63	1.64	5
Unknown,.....	44	52	96	2.5

Sex.—The tables show that of all deaths there were of males 1,897, of females 1,921; an excess of 24 females. In 1865, there was an excess of 22 males. In 1864, an excess of 245 males. The average for ten years is an excess of 42 females annually. For the year 1866, the ratio is 99 males to 100 males.

Of deaths under one year of age, there were 126 males to 100 females. Under five years, 126 males to 100 females. Between five and fifteen years, 87 males to 100 females. Between fifteen and thirty, 73 males to 100 females. Between thirty and fifty, 69 males to 100 females. Between fifty and seventy, 103 males to 100 females. Over seventy, there were 108 males to 100 females. Forty-eight persons died between the ages of 90 and 95, of whom 22 were males and 26 females. There were 15 deaths above the age of 95 years, 9 males and 6 females.

Nativity.—There are recorded 3,172 deaths of Americans, 298 of Foreigners and 371 "Unknown."

Season.—The fatality by months and quarters differs somewhat from last year, but varies little from the average of several years.

The order of months in fatality was August, March, September, April, January, October, May, June, February and July. The order by quarters was third, first, fourth and second.

Deaths by Quarters, Numbers and Rates.

QUARTERS.	1865.	1866.	1857-66.	Per Cent. 1865.	Per Cent. 1866.	Per Cent. 1857-66.
First quarter,.....	978	968	10,110	20.14	25.2	23.87
Second quarter,.....	938	903	9,663	19.31	23.49	22.73
Third quarter;.....	1,579	1,008	11,741	32.5	26.24	27.61
Fourth quarter,.....	1,308	916	11,010	26.92	23.84	25.65

The number of deaths during the year 1866, is equal to 1.21 per cent. of the whole population. Last year it was 1.54 per cent. Average during ten years, (1857-66,) was 1.37 per cent. In Massachusetts, during thirteen years, (1852-64,) the average rate was 1.88 per cent.

CAUSES OF DEATH.

No destructive epidemic has prevailed during the past year. The whole number of deaths is much less than during any previous year, since complete record have been made. This is due mainly to a diminished prevalence and fatality of Zymotic diseases, which, since 1857, had steadily increased until 1863, since which time they have as rapidly diminished; the number of deaths for 1866, being 956 less than for 1865, and 1,741 less than for the year 1863, from this cause. They have decreased more than 15 per cent. as compared with 1865, and 8 per cent. compared with the average of nine years, (1857-65.) Other classes of diseases have varied but little during the last ten years in aggregate fatality, the change in the ratio of each to the whole, being dependant mainly upon the variation in Zymotic diseases.

Of the 3,841 deaths recorded, 3,437, or nearly 90 per cent. have specified causes, leaving 404 as unknown. Some of the specified causes are probably incorrect, and others are indefinite

The following table shows the fatality from all classes of disease, with a percentage of the whole during ten years :

YEARS.	ZOMATIC.		CONSTITUTIONAL.		LOCAL.		DEVELOPMENTAL.		VIOLENT.	
	D'ths	Pr.Ct.	D'ths	Pr.Ct.	D'ths	Pr.Ct.	D'ths	Pr.Ct.	D'ths	Pr.Ct.
1857,	627	19.36	1,041	31.97	924	28.5	514	15.78	146	4.48
1858,	804	23.08	973	27.35	1,013	29.07	570	16.36	124	3.46
1859,	960	24.06	1,027	27.86	993	28.94	575	15.59	121	3.55
1860,	931	25.54	1,084	29.78	1,054	28.85	432	11.83	146	4.00
1861,	1,045	28.62	1,025	27.03	1,025	27.03	520	13.71	136	3.58
1862,	1,879	41.20	967	21.23	1,053	23.11	478	15.49	178	3.91
1863,	2,584	48.44	1,046	19.61	1,096	20.54	434	8.13	164	3.07
1864,	2,176	44.48	928	18.97	1,132	23.14	393	8.03	262	5.37
1865,	1,799	39.96	1,024	22.61	1,108	24.47	447	9.87	149	3.28
1866,	843	24.52	951	27.66	1,081	31.47	399	11.60	163	4.73
Average, 1857-66,	1,370	32.08	1,007	23.25	1,048	24.22	485	11.21	159	3.68

There has been little variation in number of deaths during ten years in each class, except Zymotic disease which reached its climax in 1863. Violent deaths increased during the war, but scarcely vary in other years.

CLASS I.—Zymotics.—Total number of deaths recorded as belonging to this class of causes, is 843, or 24.52 per cent. of all deaths.

Diphtheria.—Whole number of deaths from this cause during the year, is 190, or 4.9 per cent. of all deaths. Of these, 90 were males and 100 females. Seventy of these were under 5 years of age and 126 were under 10 years. The whole number of deaths from Diphtheria in this State, since the disease was first known, as shown by registration, is 4,170, of whom 1,920, or 46.04 per cent were males and 2,250, or 53.96 per cent. females. The deaths from Diphtheria were, in the year 1858, 13. In 1859, 65. In 1860, 212. In 1861, 441. In 1862, 818. In 1863, 1,225. In 1864, 843. In 1865, 371 and in 1866, 190. It is to be hoped that this fatal epidemic has nearly passed away from among us.

Scarlatina.—Only 38 deaths are recorded as to Scarlatina, of whom 11 were males and 27 females; a much smaller number than in any previous year. The average number during ten years, 171 per year. Probably many cases of Scarlatina have been reported as Diphtheria and *vice versa*. In the table of classification of causes, the Secretary of State has thought best to omit Diphtheria, and class them all as Scarlatina, 227 cases.

Croup.—Forty-two deaths are reported of Croup, 23 males and 18

females. Of these, 36 were under five years of age. The average number during the last ten years was 64.

Typhoid Fever.—The whole number of deaths from this cause including Infanile fever, is 225: last year, the number was 585, or 11 per cent. of all deaths. This year the per centage is 6.63. The average number during the last ten years was 288, or 6.74 per cent.

Dysentery.—The fatality from Dysentery is much less than last year, and scarcely changes the average for ten years. One hundred and thirty-nine cases are recorded, or 4.01 per cent. of all deaths. Of these 40 are males and 99 are females. Seventy-nine, or 57 per cent. were under five years of age: ten were between five and ten years of age. Only 16 were between the ages of 10 and 60 years, and 25 were between 60 and 80 years. Only 12 died during the first six months of the year, and 5 during the last three months; 10 died in June, 55 in August and 40 in September. The average number of deaths from Dysentery during ten years, (1857-66,) was 150, or 3.42 per cent. of the whole mortality.

Diarrhoea.—There are recorded 29 deaths of *Diarrhoea*; 47 of *Cholera Infantum*; 12 of *Cholera*. *Puerperal Fever* caused the death of 11 persons: 25 died of *Erysipelas*, and 31 of *Whooping Cough*.

Intemperance is charged with the death of only 3, and *Delirium Tremens* 2.

CLASS II.—*Constitutional Diseases*.—Of deaths from specified causes 951, or 27.66 per cent. were from diseases of this class. In 1865, the number was 1,024, or 22.61 per cent. The average for ten years, (1857-66,) was 1,007, or 23.25 per cent.

Of the first order, *Diasthetic Diseases*, 198 deaths are recorded, 68 males and 130 females, constituting 5.76 per cent. of all deaths from specified causes. Of these, 81 are recorded as *Dropsy*, without reference to any local disease as the real cause, 32 males and 50 females.

Cancer was the cause of 107 deaths, of whom 32 were males and 75 females. Of these, 20 were of the *Stomach*, 12 males and 8 females; 3 of the *Breast*, and 4 of the *Face*.

The second order, *Tubercular*, includes the most fatal diseases of this class, *Scrofula*, *Phthisis* and *Hydrocephalus*.

The number of deaths from *Phthisis* was 712, of whom 310 were

males and 402 females; from *Scrofula* 21, of whom 13 were males and 8 females; of *Hydrocephalus* 20, 15 males and 5 females.

The following table shows the number and percentage of deaths from *Tubercular Consumption* during ten years, (1857-66,) with the number of living to one death, and the same including all *Tubercular* diseases. Deaths from Consumption, with percentage and ratio of living. Also of all the order, *Tubercular*.

YEARS.	1857.	1858.	1859.	1860.	1861.	1862.	1863.	1864.	1865.	1866.	Tot'l	Av.
No. deaths, Cons.....	786	738	734	777	788	751	783	690	766	712	7,519	752
Per cent. of all deaths....	24.11	21.18	19.37	21.37	20.65	16.48	14.68	12.06	16.92	20.71	18.7
Living to one death.....	401	437	429	465	402	419	402	456	411	442	419
Tuberculous diseases.....	848	792	830	866	835	785	846	733	801	753	8,087	808
Per cent. of all.....	25.83	22.73	22.34	23.71	22.02	17.45	15.86	14.98	17.69	21.9
Living to one death.....	370	397	384	394	389	401	372	429	393	418

The greatest fatality was in the month of March and the least in October. In the first quarter of the year, there were of Consumption 203 deaths. Second quarter, 189. Third, 177, and Fourth, 127 deaths. Between the ages of 15 and 40 years, there were 329 deaths, 192 females and 137 males. Deaths from Consumption were 20.71 per cent. of all, or one to 442 of population. Of all tuberculous diseases, 21.9 per cent., or one to 418 of population.

CLASS III.—Local Diseases.—Of this class the most fatal order is *diseases of the Nervous System*, under which are recorded 375 deaths, or 9.1 per cent. of all. This is 23 less than last year. Of these, 164 are recorded as due to *Disease of the Brain*, and 26 to *Cephalitis*. *Apoplexy* is charged with 46 deaths, and *Paralysis* (?) with 101. Thirty-nine were said to be due to *Fits*; 14 to *Epilepsy* and 13 to *Convulsions*.

Diseases of Respiratory Organs include 290 fatal cases, or 8.42 per cent. Of these, 253 are recorded as *Pneumonia* and 13 as *Lung Diseases*; 15 as *Pleurisy* and 7 as *Asthma*. Death by *Pneumonia* include 121 males and 130 females. Of these, 80, or nearly 32 per cent. were under five years of age, and 65, or nearly 26 per cent. were over 60 years of age. The month of greatest fatality was February, and the smallest was July. The deaths in the first quarter were 65; second, 39; third, 15, and fourth, 41.

The order of *Diseases of Organs of Circulation* contains records of 150 deaths. Pericarditis, 4, and "Heart Disease," 146. Of these,

74 were males and 78 females. Of this number, 86 were over 6 years of age, and 101, or more than 66 per cent. were over 50 years of age.

CLASS IV.—*Developmental Diseases*.—There are recorded 1 *Diseases of Children*, 100 deaths; 90 as *Still Born*, and 10 at teething.

Diseases of Old People, or old age, is assigned as a cause of 24 deaths, or 7.18 per cent. of the whole. Males, 116; females, 18. All were over 70 years of age.

CLASS V.—*Violent Deaths*.—Under this class are recorded 16 deaths. Of these, 137 were from *Accidents*; 2 were *Homicide*; 2 *Suicide*. Of these last, 1 was by *poison*, 4 by *drowning*, 10 by *hanging*, and 9 otherwise. The whole number of cases of *Suicide*, during ten years, (1857–66,) was 179, or an average of 18 annually.

APPENDIX.

CLASSIFICATION OF DISEASES.

The following classification of the Causes of Death has been adopted for the Vermont Registration Reports, in order that they may conform as nearly as possible with those of other countries, thereby securing to them much greater value for the comparison of facts, both at home and abroad. It is that recommended by William Farr, Esq., M. D., of England, with the sanction and approval of the most eminent medical men of Europe, and adopted in Massachusetts, and will probably be used by many other States, as well as upon the European continent.

[NOTE.—The Latinized names of classes and of orders are derived from Greek roots, which may help the memory, and suggest, but will never define, the classes.]

CLASSES.

- I. **ZYMOTIC DISEASES** :—*Zymotici*. (*Ζύμη*, leaven.)
Diseases that are either epidemic, endemic or contagious ; induced by some specific body, or by the want of sufficient nourishment or by the the bad quality of food.
- II. **CONSTITUTIONAL DISEASES** :—*Cachectici*. (*Καχεξία*, bad habit of body.)
Sporadic diseases ; affecting several organs in which new morbid products are often deposited ; sometimes hereditary.
- III. **LOCAL DISEASES** :—*Monorganici*. (*Μόρος*, alone, without others ; *ὄργανον*, , organ.)
Sporadic diseases, in which the functions of particular organs or systems are disturbed or obliterated, with or without inflammation ; sometimes hereditary.
- IV. **DEVELOPMENTAL DISEASES** :—*Metamorphici*. (*Μεταμόρφωσις*, change of form.)
Special diseases, the incidental result of the formative, reproductive and nutritive processes.
- V. **VIOLENT DISEASES OR DEATHS** :—*Thanatici*. (*Θάνατοι*, violent deaths.)
Diseases which are the evident and direct results of physical or chemical forces, acting either by the will of the sufferer, of other persons, or accidentally.

ORDERS,

CLASS I.

1. *Miasmatic diseases* :—Miasmatici. (*Μίασμα*, stain, defilement.)
2. *Enthetic diseases* :—Enthetici. (*Ενθετος*, put in, implanted.)
3. *Dietic diseases* :—Dietici. (*Δίαιτα*, way of life, diet.)
4. *Parasitic diseases* :—Parasitici. (*Παράσιτος*, parasite.)

CLASS II.

1. *Diathetic Diseases* :—Diathetici. (*Διάθεσις*, condition, diathesis.)
2. *Tubercular diseases* :—Phthisici. (*Φθίσις*, wasting away.)

CLASS III.

Diseases of—

1. *Nervous system* :—Cephalici. (*Κεφαλή*, head.)
2. *Organs of circulation* :—Cardiaci. (*Καρδία*, heart.)
3. *Respiratory organs* :—Pneumonici. (*Πνεύμων*, lung.)
4. *Digestive organs* :—Enterici. (*Εντερον*, intestine.)
5. *Urinary organs* :—Nephritici. (*Νεφρος*, kidney.)
6. *Organs of generation* :—Aidoici. (*Αιδοῖα*, pudenda.)
7. *Organs of locomotion* :—Myostici. (*Μῦς*, muscle; *Ὅστέον*, bone.)
8. *Integumentary system* :—Chrotici. (*Χρῶς*, skin.)

CLASS IV.

1. *Developmental diseases of children* :—Paidiaci. (*Παιδία*, youth.)
2. *Developmental diseases of women* :—Gyniaci. (*Γυνή*, woman.)
3. *Developmental diseases of old people* :—Geratici. (*Γῆρας*, old age.)
4. *Diseases of Nutrition* :—Atrophici. (*Ατροφία*, atrophy.)

CLASS V.

1. *Accident* :—Tychici. (*Τύχη*, chance.)
2. *Battle* :—Polemici. (*Πόλεμος*, a battle, fight.)
3. *Homicide* :—Androphonici. { *Ἄνθρωπος*, man; *ἑαυτὸς*, self; *Φονεῖω*,
4. *Suicide* :—Autophonici. { I murder, kill.)
5. *Execution* :—Demiotici. (*Δημιώτης*, executioners.)

STATISTICAL NOSOLOGY.

NOTE.—This page and those that follow contain two lists of causes of deaths. The first—that on the left side—may be called the **TABULAR LIST**, and comprises all the heads which it is proposed to admit into the complete tables, and under which **ALL** deaths, from whatever cause, must eventually be distributed. It represents those diseases which, under the same terms, or terms strictly synonymous with them, are found in practice to occur most frequently.

The **SUPPLEMENTAL LIST** is *subordinate* to the first, and contains the principal *special* diseases which it may be considered desirable to note. But it should be observed, that *every* case marked here is also to be enumerated under one or other head in the tabular list. The tabular heads under which it is proposed to place such special cases are shown by references in figures. The special cases are referred to those heads to which they are most nearly allied. It will be found that the special cases are few, and will not affect the larger numbers in the tables to any important extent.

CAUSES OF DEATH.

TABULAR LIST.	SUPPLEMENTAL LIST.
CLASS 1. ZYMOTIC DISEASES.	<i>Of Diseases of Special Character, or rarely fatal.</i>
ORDER I.— <i>Miasmatic.</i>	
I. 1.—1. Smallpox, - - - - - 2. Measles, - - - - - 3. Scarlatina, - - - - - 4. Diphtheria, - - - - - 5. Quinsy, - - - - - 6. Croup, - - - - - 7. Whooping Cough, - - - - - 8. Typhus (and Infantile) Fever, - - - - - 9. Erysipelas, - - - - - 10. Metria (or Puerperal Fever), - - - - - 11. Carbuncle, - - - - - 12. Influenza, - - - - - 13. Dysentery, - - - - - 14. Diarrhoea, - - - - - 15. Cholera Infantum, - - - - - 16. Cholera, - - - - - 17. Ague, - - - - - 18. Remittent Fever, - - - - - 19. Rheumatism, - - - - -	I. 1.—1. Vaccination not stated. Smallpox (2d attack). After Vaccination. Erysipelas, &c., after vaccination. Chickenpox. Millaria. 2. Angina Maligna. 3. Mumps. 4. Typhoid fever. 5. Phlebitis. Pyemia. Hospital gangrene. Erythema. 18. Yellow fever. 19. Rheumatism, with pericarditis, or disease of heart.
ORDER 2.— <i>Enthetic.</i>	
I. 2.—1. Syphilis, - - - - - 2. Stricture of Urethra, - - - - - 3. Hydrophobia, - - - - - 4. Glanders, - - - - -	I. 2.—1. Gonorrhoea. Purulent ophthalmia. 4. Necrosis, (usually from dissection wounds.) Malignant pustule.

TABULAR LIST.	SUPPLEMENTAL LIST.

Bronchitis, - - - - - 4. Pleurisy, - - - - - 5. Pneumonia, - - - - - 6. Asthma, - - - - - 7. <i>Lung Diseases,* &c.,</i> - - - - -</p>	<p>III. 1.—1. Myelitis. 4. Monomania. Fright. Grief. Melancholia. Rage. 6. Hysteria. 8. Laryngismus stridulus. 9. Neuralgia. Ophthalmia. Otitis. Disease of spinal marrow. Necrencephalus (Softening of Brain — Ramollisse- ment.)</p> <p>III. 2.—1. Carditis. Endocarditis. 3. Hypertrophia. Angina pectoris. Syncope. Arteritis. Hydropericardium.</p> <p>III. 3.—2. Edema glottidis. 4. Empyema. Hydrothorax. Diaphragmitis. Pneumothorax. 5. Pulmonary apoplexy. 6. Grindler's Asthma, Miner's Asthma. Emphysema.</p>

* Other diseases of the brain, or diseases of the nervous system, not otherwise distinguished, are referred to this head. *Mutatis Mutandis*, the note applies to the corresponding heads in other orders of this class.

TABULAR LIST.	SUPPLEMENTAL LIST.
CLASS III.—(Continued.)	
ORDER 4.— <i>Digestive Organs.</i>	
4.—1. Gastritis, - - - - 2. Enteritis, - - - - 3. Peritonitis, - - - - 4. Ascites, - - - - 5. Ulceration of Intestines, - - - - 6. Hernia, - - - - 7. Ileus, - - - - 8. Intussusception, - - - - 9. Stricture of Intestines, - - - - 10. Fistula, - - - - 11. <i>Stomach Diseases,* &c.,</i> - - - - 12. <i>Pancreas Disease,* &c.,</i> - - - - 13. Hepatitis, - - - - 14. Jaundice, - - - - 15. <i>Liver Disease,* &c.,</i> - - - - 16. <i>Spleen Disease,* &c.,</i> - - - -	III. 4.—1. Glossitis. Stomatitis. Pharyngitis. Oesophagitis. 5. Perforation of— 6. Congenital. Femoral. Inguinal. Scrotal. Umbilical. Ventral. 7. Constipation. 11. Dyspepsia. Pyrosis. Gastralgia. Hæmatemesia. Melæna. Hæmorrhoids. 14. Gall-stones. 15. Cirrhosis.
ORDER 5.— <i>Urinary Organs.</i>	
5.—1. Nephritis, - - - - 2. Ischuria, - - - - 3. Nephria (Bright's disease), - - - - 4. Diabetes, - - - - 5. Calculus (Gravel, &c.), - - - - 6. Cystitis, - - - - 7. <i>Kidney Disease,* &c.,</i> - - - -	III. 5.—4. Cystirrhœa. 7. Diuresis. Hæmaturia. Dis. of prostrata. Dis. of bladder.
ORDER 6.— <i>Generative Organs.</i>	
6.—1. Ovarian Dropsy, - - - - 2. <i>Disease of Uterus,* &c.,</i> - - - -	III. 6.—2. Orchitis. Hydrocele. Hysteritis (Inflammation of Womb). Ovarian tumor. Uterine tumor. Polypus uteri.
ORDER 7.— <i>Organs of Locomotion.</i>	
7.—1. Arthritis, - - - - 2. <i>Joint Disease,* &c.,</i> - - - -	III. 7.—1. Ostitis. Periostitis. 2. Fragilitas ossium. Moll. ossium. Caries. Necrosis. Exostosis.
ORDER 8.— <i>Integumentary System.</i>	
8.—1. Phlegmon, - - - - 2. Ulcer, - - - - 3. <i>Skin Diseases,* &c.,</i> - - - -	III. 8.—1. Abscess (part not stated). Boil. Whitlow. 2. Roseola. Urticaria. Eczema. Herpes. Pemphigus. Ecthyma. Impetigo. Psoriasis. Ichthyosis. Tumor (part not stated).

See note under III. 1.—2.

TABULAR LIST.	SUPPLEMENTAL LIST.
CLASS IV. DEVELOPMENTAL DISEASES.	
ORDER 1.— <i>Developmental Diseases of Children.</i>	
IV. 1.—1. Stillborn, - - - - - 2. Premature birth, and Infantile Debility, - - - - - 3. Cyanosis, - - - - - 4. Spina Bifida, - - - - - 5. Other Malformations, - - - - - 6. Teething, - - - - -	IV. 1.—2. Atelectasis. 5. Anus imperforatus. Cleft palate. Idiocy.
ORDER 2.— <i>Developmental Diseases of Women.</i>	
IV. 2.—1. Paramenia, - - - - - 2. Childbirth. (See Metria I. 1.—9.)	IV. 2.—1. Chlorosis. Climacteria. Menorrhagia. 2. Miscarriage. Abortion. Puerperal Mania. Phlegmasia dolens. Caesarian operation. Extra uterine foetation. Flooding. Retention of placenta. Presentation of placenta. Deformed Pelvis. Breast abscess.
ORDER 3.— <i>Developmental Diseases of Old People.</i>	
IV. 3.—1. Old Age, - - - - -	
ORDER 4.— <i>Diseases of Nutrition.</i>	
IV. 4.—1. Atrophy and Debility, - - - - -	
CLASS V.—VIOLENT DEATHS.	
ORDER 1.— <i>Accident or Negligence.</i>	
V. 1.—1. Fractures and Contusions,* - - - - - 2. Wounds, - - - - - 3. Burns and Scalds, - - - - - 4. Poison, - - - - - 5. Drowning, - - - - - 6. Suffocation, - - - - - 7. Otherwise, - - - - -	
ORDER 2.— <i>Battle.</i>	
ORDER 3.— <i>Homicide.</i>	
ORDER 4.— <i>Suicide.</i>	
V. 4.—1. Wounds, - - - - - 2. Poison, - - - - - 3. Drowning, - - - - - 4. Hanging, - - - - - 5. Otherwise, - - - - -	
ORDER 5.— <i>Execution.</i>	
V. 5.—1. Hanging, - - - - -	
Violent Deaths, not classed, - - - - - Sudden, cause undascertained, - - - - -	

NOTE.—Where a person is "found drowned," the coroners, as in some other cases, not always succeed in discovering whether the case is a suicide, a murder, or an accident. All such cases are classed under "accident or negligence." Cases of "infantile fever" classed with those of typhoid, relapsing, and other continued fevers, under one "typhus." Cases of "rheumatic fever" are classed with "rheumatism;" of "hemorrhoids" and "abscess," with the diseases of the organs affected. Cases of "neglect" and "except when the result of privation. (Class I. 3.—1.) are placed (with notes) under "accident or negligence," (V. 1.—7.) As "stricture of the urethra" is almost invariably the result of gonorrhœa, it is classed as I. 2.—2.

* Including "Railroad Accidents."

LAW OF THIS STATE

RELATING TO THE REGISTRY AND RETURNS OF BIRTHS, MARRIAGES AND DEATHS.

AN ACT RELATING TO THE REGISTRY AND RETURNS OF BIRTHS, MARRIAGES AND DEATHS.

SEC. 1. The clerks of the several towns of this State shall, annually, in the month of June, transmit to the Secretary of State a certified copy of their record of births, marriages and deaths, which have occurred in their respective towns during the year next preceding the first day of January. The births shall be numbered and recorded in the order in which they are received by the clerk. The record of births shall state in separate columns the date of the birth, the name of the child (if it have any), the sex of the child, the place of birth, name and surname of one or both the parents, residence of the parents, occupation of the father, and the time when the record was made. The marriages shall be numbered and recorded in the order in which they are received by the clerk. The record of marriages shall state in separate columns the date and place of marriage, the names and surnames of the groom and bride, the residence of each at the time of marriage, the age of each, occupation of the man, and time when the record was made. The deaths shall be numbered and recorded in the order in which they are received by the clerk. The record of death shall state in separate columns the date of the death, the name and surname of the deceased, the sex, condition (whether married or single), age in years, months and days, the place of death, the disease or apparent cause of death, the occupation, if a male over fifteen years of age, the place of birth, the name of the parents, and the time when the record was made.

SEC. 2. The clerks in the several school districts in each town shall annually, in the month of February, ascertain, from actual inquiry or otherwise, all the births and deaths which have happened in their respective districts during the year next preceding the first day of January, together with such facts concerning the births and deaths as are required by the preceding section of this chapter, and shall make an accurate return thereof to the clerk of the town in which such school district is situated, on or before the first day of March; and the district clerk or other person or persons authorized to perform his duties and make such returns, shall be entitled to receive from the treasury of such town five cents for each and every birth and death so returned. And if such person shall neglect or refuse to make the returns required by this section, he shall be liable to a fine of not less than five dollars for each neglect or refusal.

SEC. 3. Every justice of the peace or minister of the gospel shall make a record of each marriage solemnized before him, and every clerk or keeper of records of the meetings wherein any marriage among the people called Friends, or Quakers, shall be solemnized, shall make a record of such marriage, together with all the facts relating to marriages required by the first section of this chapter; and such justice, minister or clerk, shall annually, in the month of February, or from time to time, return a copy of the record for the year next preceding the first day of January, to the clerk of the town in which the marriage was solemnized; and every such person who shall neglect or refuse to make the returns required by this section, shall be liable to a fine of not less than ten dollars for each neglect or refusal, to be recovered on the complaint of a grand juror of such town.

SEC. 4. The clerk of each town shall be entitled to receive from the treasury of the town five cents for recording each birth, death and marriage; provided, said clerk shall comply with the provisions of this chapter in all respects.

SEC. 5. It shall be the duty of the clerks of the several towns to make such distribution of the blank forms of returns as shall be designated by the Secretary of State.

SEC. 6. The Secretary of State shall, at the expense of the State, prepare and furnish to the clerks of the several towns in this State,

blank forms of suitable quality and size, to be used as books of records, according to the provisions of this chapter, and also blank forms of returns, as hereinbefore specified, and shall accompany the same with such instructions and explanations as may be necessary and useful.

SEC. 7. Every physician who shall have been in attendance upon any deceased person, shall leave with the town clerk a certificate containing the name of the disease or cause (if known) of such death, within fifteen days after the interment of the deceased. Any such medical attendant who shall neglect or refuse to give the certificate required by this section, shall, for such offense, pay a fine of three dollars, for the use of the town where such offense shall be committed.

SEC. 8. It shall be the duty of the Secretary of State to receive the returns made in pursuance with the first section of this chapter, and he shall cause the same, at the expense of the State, for each year to be bound together in one or more volumes, with indexes thereto; and with such assistance as may be voluntarily rendered by any authorized committee, appointed by the Vermont Medical Society for that purpose, prepare therefrom such tabular results as will render them of practical utility, and make a report thereof annually to the Legislature, and generally shall do whatever may be required to carry into effect the provisions of this chapter.

SEC. 9. The Secretary of State shall cause prosecutions to be commenced, in the name of the State, in an action on the case, founded on this chapter, to recover any penalty or forfeiture imposed by any provisions therein.

AN ACT IN AMENDMENT OF SECTIONS ONE, TWO AND THREE OF CHAPTER SEVENTEEN OF THE GENERAL STATUTES, RELATING TO REGISTRY AND RETURNS OF BIRTHS, MARRIAGES AND DEATHS.

SEC. 1. That chapter seventeen, section two, of the General Statutes, shall be amended by striking out of the ninth line in said section the word "March," and by inserting therein the word "February," and that the word "February," in the second line, be stricken out, and the word "January" inserted.

SEC. 2. That from the third section of the same chapter there

shall be stricken out the word "February," and inserted therein word "January."

SEC. 3. That from the first section of the same chapter th shall be stricken out the word "June," and the word "Marc inserted.

SEC. 4. This act shall take effect from its passage.

Approved, November 15, 1866.

ELEVENTH REPORT
TO THE
LEGISLATURE OF VERMONT,
RELATING TO THE
REGISTRY AND RETURNS
OF
Births, Marriages & Deaths,
IN THIS STATE,
FOR THE
YEAR ENDING DECEMBER 31ST, 1867.

PREPARED UNDER THE DIRECTION OF
GEORGE NICHOLS, Secretary of State.

RUTLAND:
TUTTLE & CO., PRINTERS.
1869.

IN SENATE, November 19th, 1888.

On motion of Senator Ballard, the Secretary was directed to procure the printing of one thousand copies of the Eleventh Annual Registration Report, for the use of the General Assembly.

HENRY CLARK, *Secretary.*

REPORT.

STATE OF VERMONT.

OFFICE OF SECRETARY OF STATE, }
NORTHFIELD, Oct. 1st, 1868. }

To the General Assembly of the State of Vermont:

In compliance with the laws of this State, I have the honor to transmit herewith the Eleventh Annual Report, relating to the Registry and Returns of Births, Marriages and Deaths, that have occurred in Vermont during the year ending December 31st, 1867.

The "Summary of Observations" deduced from the tables comprising the Report, is from the pen of L. C. Butler, M.D., of Essex, the popular and efficient Secretary of the State Medical Society. These analytical remarks and deductions give ample evidence of research in, and knowledge of the higher scientific pursuits, and an aptitude for statistical information.

To the consideration of those who believe that the obligations of a true philanthropy do not consist in an alleviation of suffering simply, but in a knowledge of human development in communities, modified by the various influences that may promote or retard their growth and welfare, the entire report is especially commended.

Respectfully submitted,

GEORGE NICHOLS,
Secretary of State.

CONTENTS.

	TABLES.	PAGES.
I.	GENERAL ABSTRACTS.—Population in 1860, Births, Marriages and Deaths, registered in each town, distinguishing the sex and parentage of Births, the nativity of Marriages, the sex, aggregate and average ages, and the percentage of Deaths, .	2-17
	<i>Recapitulation of General Abstracts,</i>	18-19
II.	BIRTHS.—Showing the number of each sex, in the several counties, during each month,.....	20-21
	A. <i>Supplement.</i> —Plurality Births, by counties, by months and by sex,	22

SUMMARY OF OBSERVATIONS.

Eleven years have passed away since the first record of three important events in the social life of the inhabitants of this State—Births, Marriages and Deaths—was made. Annually since then, those events have been recorded, and are accessible to all whose interest or curiosity shall prompt to an investigation. Their importance increases from year to year, and the more complete and perfect in detail they are, the more valuable will they become.

From the first these reports have been improving in completeness and accuracy, till the tables of the present report contain returns from all the towns in the State, save five, having an aggregate population of 3,158. These towns are: East Haven, Bloomfield, Brighton, Woodford and Fair Haven.

Doubtless, as the Physicians of the State shall be induced to pay more attention to the matter of certifying as to the "Causes of Death," as required by law, the returns under that head will be more complete and accurate. In some towns, the Town Clerk invites a resident Physician to aid him in making out his returns to the Secretary of State, a practice which is highly commendable. And now that blanks are furnished to each Physician in practice, no other excuse can be offered for failure in accuracy in reporting causes of death, in every case, than that the State asks for information, and affixes a penalty for non-performance of duty in giving it, when it proposes no compensation for the labor required. And yet, the Physician who carefully studies these registrations from year to year, will find in them a vast store of information and profit, in the facts which they record in regard to the "influence of density of population and of various occupations upon mortality; the distribution of diseases between the sexes; the influence of seasons and of age;" the comparative exemption of certain localities from epidemics and the presence of them in others, and the causes therefor, whether or not, in the peculiar constitution of the season or the year; and will gain through them an invaluable guide to judicious treatment. And the more he studies by classification and analysis the vital statistics which these reports furnish, the better will he understand the

influences which affect the public health, and the better be enabled to meet the growing demands of the community upon his professional skill and ability.

The prevention of disease is becoming a subject full of interest to the popular mind. Its practicability, to some considerable extent, has been already demonstrated. But the conditions necessary to effect it must be clearly shown by the inexorable logic of facts, such as the statistics embodied in these reports present. It may be difficult to collect these facts; it may be wearisome to analyze and arrange them so as to deduce from them the lessons they teach; the formal array of figures may be forbidding, and exhibit neither form nor comeliness which should cause them to be desired;—but beneath all these, lies the fact, the essential truth necessary to be known and understood, before the practical result—the prevention of disease—shall be attained.

GENERAL SUMMARY.

The tables embodied in this report show that, during the year ending December 31st, 1867, the whole number of births, in this State, was *six thousand, four hundred and sixty-eight*, (6,468); of which 3,272 were males, and 3,144 were females. Of 52, the sex is not stated.

During the same period, the marriages were 2,857 couples, or 5,714 persons; a number less by 144 couples, or 288 persons, than were reported in 1866, but considerably greater than the number reported for any year previous to that.

The number of deaths, for the same period, was 4,088, of which 1,975 were males and 2,083 females. Of 30, the sex is not given.

Compared with 1866, the number of births was 64 less; 115 greater than in 1865 and 715 greater than in 1864.

The deaths were 247 greater than in 1866, when 3,841 were reported; 770 less than in 1865; 1,205 less than in 1864, and less by 219 than the average for eleven years past, 1857–67.

The population of the State being 315,098, there was during the year one birth to every 48.7 of the inhabitants, against one to every 48.2 for 1866.

One person out of every 55.1 was married during the year, against one in every 50.8 for 1866; and there was one death to every 77 persons living, against one to every 82 persons last year.

The average number of births daily was 17.72;—last year, 17.62. The number of marriages was 7.82 daily, against 9.43 in 1866; and of deaths, 11.2 against 10.52 last year.

The average age of those who died was 38.14, last year 38.48.

POPULATION.

The period is approaching when the Ninth Census of the United States will be taken, by the authority of Congress. Calculations based upon the census of 1860, will, therefore, be of little value, farther than in directing attention to the manifest errors of that census in reference to Vermont, and in introducing a tabular statement or two which may aid us in deducing results, when that census shall be announced.

According to the U. S. Census of 1860, Vermont had remained nearly stationary in population, her increase being only 978 in ten years. By the small margin of "*one third of one per cent.*," she was saved from a positive loss of inhabitants.

That the State has lost in population during the past few years by emigration, there can be no reasonable doubt, and the ninth census may show an absolute decrease in her population. To illustrate this point more fully, we give below a table showing the number of births and deaths which have occurred during the past eleven years, as recorded in the Registration Reports of the State:

YEARS.	WHOLE NO. BIRTHS.	WHOLE NO. DEATHS.	EXCESS OF DEATHS.	EXCESS OF BIRTHS.
1857.....	6412	3512	2900
1858.....	6477	3581	2896
1859.....	6545	3725	2820
1860.....	6451	3897	2554
1861.....	6567	4038	2529
1862.....	5505	4836	669
1863.....	5369	5710	341
1864.....	4753	5293	540
1865.....	5353	4858	495
1866.....	6532	3841	2691
1867.....	6468	4088	2380
Totals,.....	66,432	47,379	881	1,9934

Taking these figures as the basis of calculation, it appears that the State has apparently increased in population 19,053 in eleven years, or has made a mean annual increase by excess of births over deaths of 1,732. Yet, it should be noted that the U. S. Census makes only an annual increase of 97, from 1850 to 1860. During one half of the period covered by that census, the excess of births over deaths was equal to an annual increase of 2,285. Statements differing so widely can hardly both of them be true. And yet, as we consider the matter further, we may be able to reconcile them.

Vermonters are found in every State and Territory of the Union. The tide of emigration flows steadily away from our borders. The bone and sinew, intelligence, enterprise and worth of the Green Mountain State, are giving character and energy to the rising institutions of the great West and the sunny South.

To give some idea of the magnitude of this emigration, as well as to exhibit more plainly the extent of the depleting process by which Vermont is constantly being deprived of the choicest and most enterprising classes of her inhabitants, we have compiled the following table from the U. S. Census of 1860.

Table showing the emigration *from* Vermont to other States, and *from* other States to Vermont.

EMIGRATED TO, FROM VERMONT.	STATES.	EMIGRATED FROM, TO VERMONT	EMIGRATED TO, FROM VERMONT.	STATES.	EMIGRATED FROM, TO VERMONT.
174	Alabama,	86	549	New Jersey,	153
121	Arkansas,	5	46,990	New York,	8,608
3,419	California,	11	53	North Carolina,	11
1,862	Connecticut,	2,733	11,652	Ohio,	259
10	Delaware,	4	293	Oregon,	3

1,835	Missouri,	18	131	Washington,	
11,950	New Hampshire, ..	16,682	174,765		43,198

From this table it appears that Vermont has lost more than one hundred thousand of her inhabitants by emigration alone, within the ten years comprised in this census. If this rate of depletion has continued since, the Ninth U. S. Census will show a large actual decrease of our population, and also that while the excess of births over deaths is correct, still emigration absorbs all that excess, and largely over balances the apparent increase.

The importance of absolute correctness in the census about to be taken is obvious, for without it no accurate calculations or deductions can be made from the statistics which it presents. And it would add greatly to the value of these deductions for sanitary purposes, if the census of the State should be taken every five years as in Massachusetts. We would commend this matter to the attention of the Legislature.

BIRTHS.

The whole number of births recorded, during the year 1867, was 6,468. The number for the eleven years during which Registration Reports have been published, together with the birth rate, population to birth, and sex, is shown in the following

TABLE.

YEARS.	WHOLE No.	BIRTH RATE.	POPULA- TION TO 1 BIRTH	MALES.	FEMALES
1857.....	6412	2.04	49.1	3282	3071
1858.....	6477	2.06	48.6	3294	3142
1859.....	6545	2.11	47.7	3351	3155
1860.....	6451	2.05	48.8	3225	3186
1861.....	6567	2.08	48.	3354	3170
1862.....	5505	1.75	57.2	2831	2650
1863.....	5369	1.70	58.7	2719	2624
1864.....	4753	1.68	61.	2439	2264
1865.....	5353	1.69	58.8	2761	2564
1866.....	6532	2.07	48.2	3376	3113
1867.....	6468	2.05	48.7	3272	3144
Totals,	66,432			33,939	32,683
Average annual,		1.93	52.25	3,085	2,916

The total number of births in eleven years, as appears from this table, is 66,432, which exceeds the number of deaths in the same period by 19,053. The average annual number of births is 6,039, which is 1,732 more than the average annual number of deaths for the same period. The excess of births over deaths, for 1867, is 2,380, or 63.2 deaths to every 100 births. The average for eleven years, 1857-67, 72.73 to every 100 births.

It is interesting to note the variation of the birth rate during the period embraced in these reports. It was the highest in 1859, being 2.11 or one in every 47.7 of the population, and the lowest in 1864 and 5; the close of the war and the first year of peace, when the State had been drained of thousands of her patriotic citizens, and the survivors were returning to their homes. During these years the birth rate was 1.68, 1.69 respectively, or one to 61 and 58.8 of the population. In 1866 it rose to 2.07, sinking again to 2.05 in 1867, or one to about 48.7 of the inhabitants. The average for the eleven years was 1.93.

In England, with a population of eighteen millions, during 26 years, from 1838 to 1863, the average birth rate was 3.33. In Massachusetts, with a population of 1,267,031 the highest birth rate was 2.90 in 1852-58; 2.85 in 1856-60; the lowest in 1862-5, the war period, 2.46; and in 1866 rising to 2.69.

Sex.—The returns for this year show the birth of 3,272 males and 3,144 females, or in the ratio of 1,040 males to 1,000 females, which is smaller than for 1866 when it was 1,081 males to 1,000 females, or for the ten years, 1857-66, when it was 1,059 males to 1,000 females. Of 52 the sex is not give.

The proportion of the sexes born in the State, for the years 1857-67, inclusive, is as follows:

YEARS.	1857.	1858.	1859.	1860.	1861.	1862.	1863.	1864.	1865.	1866.	1867.
Males to each 100											
Females,	106.8	104.8	106.2	100.1	105.8	106.8	103.2	107.7	107.6	108.1	104.

This gives for the whole eleven years 105.5 males to each 100, females.

The following table shows the number of each sex by counties with ratio of males to females :

COUNTIES.	Males.	Females.	Males to 100 Females.	COUNTIES.	Males.	Females.	Males to 100 Females.
Addison,	240	219	109	Lamoille,	124	112	110
Bennington,	257	222	115	Orange,	197	215	91
Caledonia,	210	215	97	Orleans,	172	204	84
Chittenden,	357	331	107	Rutland,	457	457	100
Essex,	37	40	108	Washington,	249	249	100
Franklin,	294	280	105	Windham,	263	211	124
Grand Isle,	42	39	107	Windsor,	373	350	106

From this table it appears that the counties were prolific in the following order: Rutland, where the sexes were equal; Windsor, Chittenden, Franklin; Washington, where the sexes were equal; Bennington; Windham, which shows the largest disproportion of sexes; Caledonia, Orange, Orleans, Lamoille, Grand Isle and Essex.

Season. The largest number of births occurred in October, 480, last year September;—next in order, are December, July, January, November, April, September and August equal, May, June, February and March. The smallest number was in March, 431, last year in January. The number for the third quarter is largest, 1,687. That of the first quarter is 1,441,—much less than either of the others.

Plural Births. One hundred and thirty plural births are recorded, among which were four cases of triplets, viz: in Monkton, two females and one male; in Whiting and Benson, each three males, and in West Haven, three females. Of these births, 71 were males and 59 females. This is one to every 99.5 of all births. In 1866, the number was 66, or one to every 98 of all births.

The following table will exhibit the number of these births, during the years 1857–67, inclusive; the sex, and number to all births.

YEARS.	1857	1858	1859	1860	1861	1862	1863	1864	1865	1866	1867
Number,	95	141	115	144	135	95	106	62	58	132	130
Males,	52	70	78	73	78	44	61	40	36	71	71
Females,	43	71	37	71	57	51	45	22	22	61	59
Number to one birth,	131	91	113	89	96	115	101	148	184	98	99

Average for eleven years 115, which is exactly the number of plurals to all births for 1862, the middle year of the period.

Illegitimates. Forty cases are recorded, of which 21 were males and 19 females, including one twin case. This is the same as last year, and is one to every 161.7 of all the births. During ten years, 1857-66, the average annual number was 50, or one to every 20 of all births.

Stillborn. The number recorded for this year is, 82, or one to every 78 births. In 1866, the number recorded was 90, or one to every 72 births. Probably this is somewhat under the true number. The practice of procuring abortion, by self infliction, or by the aid of the infamous abortionist has become so common as to be an alarming evil, and the attention of the people, as well as of the Medical Profession, has been directed to its remedy. During the session of the Legislature for the present year, a very stringent law was passed, which, though it may not entirely suppress the evil of criminal abortion, will yet check it to some extent. It has already resulted in some good. The press of Vermont, to their credit be it recorded, have resolved to admit to their columns no advertisement which comes within the prohibition of the State law.

Parentage. Of the whole number of births, 4,467, or 69.68 per cent. are recorded as of American parentage; 1,665, or 25.74 per cent. of Foreign parentage and 336, or 5.2 per cent. as Unknown. Last year, the per cent. was 66.97 American; 26.39 Foreign, and 6.63 Unknown. The percentage of population is 89.6 Americans to 10.4 Foreigners. The percentage of births to population is 63 of the former to 20 of the latter.

The important facts connected with this subject are grouped together in the following tables.

Table showing the population and number of births by counties, the number of inhabitants to a birth, parentage and per cent. of American and Foreign births :

COUNTIES.	Population.	Births, American.	Births, Foreign.	Unknown.	Total.	Percentage, American.	Percentage, Foreign.	Population to 1 birth.
Addison,	24010	324	119	17	460	70.4	25.8	52.
Bennington,	19436	339	121	21	481	70.6	25.2	40.
Caledonia,	21708	333	76	22	431	77.2	17.6	50.
Chittenden,	28171	343	305	44	692	49.5	44.	40.

Totals,	315098	4467	1665	336	6458
Averages,	70.	22.3	51.42

The following table shows the parentage of all the children born in the State, whose parentage is recorded for the eleven years covered by these Registration Reports, with per cent. of each to population of each class. The population of Vermont, by the U. S. Census of 1860, was divided as follows : American, 282,365 ; Foreign, 32,743.

PARENTAGE.	1857	1858	1859	1860	1861	1862	1863	1864	1865	1866	1867
American,	4164	4359	4523	4496	4804	3850	3904	3400	3680	4373	4467
Foreign,	1374	1583	1599	1514	1538	1346	1188	1023	1340	1721	1665
Births to every 1000 population.											
American,	14.7	15.4	16.	15.9	16.9	13.	13.8	12.	13.	15.4	15.8
Births to every 1000 population.											
Foreign,	41.	49.	50.	46.	47.	40.	36.	31.	40.	52.	50.

Average American for eleven years, 14.7.

Average Foreign for eleven years, 43.

An examination of the foregoing table shows that the greatest proportion of American births to each thousand of the population, was in 1861, the first year of the war, when it was a fraction short of 17., and the smallest proportion was in 1864, the year before its close, when it was 12. Since the latter period it has been gradually increasing, but has not yet reached that of 1861. The average for eleven years is nearly 16.

On the other hand the greatest percentage of Foreign births was in 1866, when it reached 52. in every thousand of the population of that class. The smallest percentage was in 1864, when it was 31. The average for eleven years was 43. The figures, for 1867, show an increase of American births and a decrease of those of Foreign parentage; yet, the latter numbered 50. in every thousand in that year, while the former numbered only 15.8. So that the births among the Foreign population are actually *three to one* of the native population, a fact which, unwelcome as it is, forces itself upon our consideration, and, to some extent, verifies the fears entertained by some, that the Foreign population may ere long outnumber the American by natural increase. Still at the present ratio of increase, the time when, by natural generation, Foreigners shall be sufficient in numbers to assume the control of our State Government, is far distant in the future. In no county of the State have the births of Foreign parentage exceeded those of the native population.

MARRIAGES.

The number of Marriages recorded is 2,857, or 5,714 persons. This is less by 144 than last year. Of these, 3,441 are recorded as Americans; 490 as Foreigners, and 1,783 as Unknown. The latter class ought to be reduced in numbers. A little more painstaking in the record would do it.

The following table shows the number of Marriages during each of the eleven years, with the ratio to the population, and average for the whole period.

YEARS.	1857	1858	1859	1860	1861	1862	1863	1864	1865	1866	1867	Total 1857-67.	Average 1857-67.

Americans,.....	1812	2764	2646	2858	3074	2818	2674	2816	2948	3442	3441	30,793	27.9
Foreign,.....	290	392	394	380	376	332	430	272	464	549	490	4,269	3.88
Unknown,.....	1780	1474	1298	1120	926	774	910	1020	1726	2011	1768	14,822	13.47

The counties rank as follows: Windsor, Rutland, Windham, Franklin, Washington, Orleans, Orange, Addison, Caledonia, Bennington, Chittenden, Lamoille, Essex, Grand Isle. The months as follows:—November, January, October, September, December, March, February, July, June, August, May, April.

There were 756 Marriages in the first quarter; 514 in the second; 660 in the third, and 897 in the fourth. The ratio of marriages to population is one to 110, or one person married to every 55 persons living. The average for eleven years, 1857-67, is one to 141.6, or one person married to every 70.8 living.

Of all the marriages recorded, 1,710 were of bachelors to maids; 90 of bachelors to widows; 258 of widowers to maids. One hundred and ninety-five widowers married widows, and of 604 the condition is not stated.

In 796 instances, (last year, 765,) the bride was under 20 years of age; in 76, (last year, 85,) the groom was under 20, and in 57 instances, (last year, 62,) both parties were under 20. Twenty-two men (last year, 17,) and two women were over 70 years of age. Three widowers, over 70, married maids over 40, 60 and 70 respectively.

It would be interesting and profitable, in this connection, to study the effect of marriage upon the longevity of the sexes, but unfortunately the statistics given in our Registration Reports do not show so accurately the married or single condition of those who die, as to

afford us data upon which we can safely base our calculations or inquiries.

This subject has undergone a thorough investigation in Scotland, and from an able paper written by James Stark, M. D., the accomplished and learned Chief of the General Registry Office of that country, and sent to the American Statistical Association, and communicated to the *Boston Medical and Surgical Journal* for publication; we quote the following:

TABLE 1.—Married and unmarried men at each quinquennial period of life in Scotland, 1863; the deaths at the same ages; and the percentage of deaths to the living at each age, (year 1863.)

AGES.	HUSBANDS & WIDOWERS			BACHELORS, (UNMARRIED)

All ages,.....	503376	11769	2.338	243259	4194	1.723

This table presents some very startling results, which would perhaps be fully confirmed by a like analysis of the Registration Reports of this State, if the data could be as accurately obtained. Note the immense difference between the mortality of the married and unmarried. At every period, from 20 to 85, the death rate of the married men is much smaller than that of the unmarried. Of

every one hundred thousand unmarried men, between the ages of 20 and 25, 1,174 died during the year; while of a like number of married men only 597 died, or about one half the number. In other words, the death rate of bachelors between those ages was almost double that of the married men. And so as the age increases, the death rate still shows a marked difference in favor of the married men at every period of life; and even at the extreme age of 80 to 85 years, while 19,688 died during the year, out of every one hundred thousand bachelors, only 17,400 died out of a like number of married men. The influence of marriage upon the male mortality is thus shown to be of the most potent kind, and bachelor life to be more destructive to the male sex than the most unwholesome of trades.

This fact is rendered still more striking if we calculate the mean age at death of the married and unmarried men. Taking the figures of this table as our basis, we find that the mean age at death of the married men was $59\frac{7}{10}$ years; whereas the mean age at death of the bachelors was only 40 years! The married men have, therefore, a chance of living $19\frac{7}{10}$ years longer than those who remain bachelors. The provision of nature herein is not only a wise one, but specially designed to protect the heads of a family, in order that they may provide for their offspring and superintend their rearing.

Grouped together in another table, we find the same general facts exhibited in relation to married and unmarried females,—showing that although the proportion of deaths among the married and unmarried women differed slightly during several of the periods, there is no disagreement in the ultimate results of the comparison. Marriage tends to lengthen the life of both sexes.

But space forbids our following this interesting array of facts upon this subject further. We can only hope they may arrest attention and lead to further investigation.

DEATHS.

The whole number of deaths, during the year ending December 31st, 1867, was 4,088, which is 247 great than 1866, and 219 less than the average for eleven years, 1857-67.

The following table shows the whole number of deaths during eleven years, with percentage, ratio of deaths to the living and the average age of those who have died.

YEARS.	1857.	1858.	1859.	1860.	1861.	1862.	1863.	1864.	1865.	1866.	1867.	Total	Average 1857-67.
No. Deaths,	3512	3551	3725	3897	4038	4836	5710	5493	4858	3941	4088	47375	4307
Percentage, Living to 1	1111	1135	1182	1237	1282	1535	1818	1711	1541	1212	1503	1267
Death	89	87	84	81	78	65	55	58	68	82	77	74
Average Age,	33.23	36.57	39.55	35.44	35.53	30.65	31.01	29.22	35.28	33.48	36.76	35.07

The average annual number of deaths, for the past eleven years, is 4,307, or one to every 74 inhabitants; for the year 1866, one death to every 82 inhabitants.

The death rate for the year is 1.29. The average for the eleven years, 1857-67, is 1.36. Comparing this with the birth rate for the year, which is 2.05, we reach the very gratifying result that the birth rate has exceeded the death rate by 0.76 per cent., and exceeded the average death rate for eleven years by 0.69 per cent.

The counties of the State rank in healthfulness, as follows: Windsor, 562; Rutland, 472; Windham, 399; Chittenden, 360; Washington and Caledonia, each 319; Orange, 315; Franklin, 311; Bennington, 287; Addison, 262; Orleans, 245; Lamoille, 156; Essex, 43, and Grand Isle, 38.

Ages. The ages are given of 4,058, of those who died during the year, leaving 30 whose ages are not stated. The average age is 36.76 years, being less than 1866, but greater than any year previous and greater than the average (35.07) for the eleven years, 1857-67.

The following table shows the number and percentage of deaths at the specified ages, with the rates of the living at each period.

AGES.	Male.	Female.	Aggre- gate.	Percent- age.	Living to 1 Death.
Under 1 year,	342	312	654	15.99	10
1 to 5,	214	182	396	9.68	76
5 to 10,	62	63	125	3.05	281
10 to 20,	101	154	255	6.21	265
20 to 30,	141	244	385	9.41	132
30 to 40,	140	166	306	7.48	125
40 to 50,	103	152	255	6.21	123
50 to 60,	133	155	288	7.04	85
60 to 70,	231	196	427	10.44	39
70 to 80,	265	225	490	11.98	16
80 to 90,	158	159	317	7.75	8
100,	38	45	83	2.02	16
OWN,	47	30	77	1.88

From this table it will be observed that the deaths under *one* year are increased nearly one hundred (92) over last year. Those under *five* years are increased 23, while those under *ten* are lessened by 40. Between the ages of 20 and 30 there is an increase of 55 over last year; and between those of 60 and 80, there is an increase of 74. More than one-third of all the deaths in the State occur under the age of *ten* years.

Sex. Of all the deaths, 1,975 were males and 2,083 were females, an excess of 108 females.

The excess of deaths in each of the sexes during the eleven years, 1857-67, is shown by the following table:

	1857	1858	1859	1860	1861	1862	1863	1864	1865	1866	1867
Males,						170	13	245	22
Females,	209	234	192	103	125	24	108

The average for the eleven years shows a mean annual excess of 53 females. For the year 1866, the ratio was 99 males to 100 females. For 1867, the ratio is 90 males to 100 females. *Sixty-six* persons died between the ages of 90 and 95—the sexes being equally divided. *Seventeen* deaths occurred in persons above 95, five males and twelve females. *Five* deaths are recorded of persons one hundred years old and upwards, two males and three females.

Nativity. There are recorded 3,402 deaths of Americans, 260 of Foreign and 426 Unknown. Probably the greater portion of the "unknown" may be set down as "foreigners."

Seasons. The order of months in fatality differs somewhat from last year. It is as follows: September, 471; August, 438; October, 366; April, 359; March, 337; December, 329; November, 315; July, 309; May, 298; January, 283; June, 268; February, 265. In 1866, August gave the largest number of deaths, and July the least.

The order of quarters is third, fourth, second, first;—last year, third, first, fourth, second. There is, however, but slight variation from the average of several years.

The number of deaths during the year is equal to 1.29 per cent. of the whole population. Last year, it was 1.21 per cent. The per cent. during the eleven years, 1857-67, is shown in the following table.

1857.	1858.	1859.	1860.	1861.	1862.	1863.	1864.	1865.	1866.	1867.
1.11	1.13	1.18	1.23	1.28	1.53	1.81	1.68	1.54	1.21	1.29

Average, during eleven years, 1.36. In Massachusetts; the death rate for 1866, is 1.86. The rate for all England is about 2.21, and the standard of normal mortality in that country has been generally recognized to be 1.70 per cent., or *seventeen* in a thousand, and as the mortality ranges above or below this point, so it is reckoned healthy or unhealthy. This standard is not, however, absolutely fixed. It is liable to change with succeeding generations. Assuming this, however, as the normal rate of mortality, a rate, however, which is hardly ever maintained for a series of years in any country, the results of our Registration Reports must be regarded as highly satisfactory, and as indicating that the prospect of long life in Vermont is as good to-day as that of the inhabitants of any civilized country.

CAUSES OF DEATH.

No desolating epidemic has swept over the State during the year, and yet the number of deaths has increased. This increase pertains to all the classes of diseases, save the violent, as shown by the following table, which exhibits the fatality from each class with the percentage of the whole during eleven years, 1857-67:

YEARS.	ZYMOTIC.		CONSTITUTIONAL.		LOCAL.		DEVELOPMENTAL.		VIOLENT.	
	D'ths.	Pr.Ct.	D'ths.	Pr.Ct.	D'ths.	Pr.Ct.	D'ths.	Pr.Ct.	D'ths.	Pr.Ct.
1857	627	19.26	1041	31.97	928	28.5	514	15.78	146	4.48
1858	804	23.08	973	27.35	1013	29.07	570	16.36	124	3.46
1859	960	26.06	1027	27.86	993	26.94	575	15.59	131	3.55
1860	933	25.54	1088	29.78	1054	28.85	432	11.83	146	4.
1861	1085	28.62	1025	27.03	1025	27.03	520	13.71	136	3.58
1862	1879	41.20	967	21.23	1053	23.11	478	15.49	178	3.91
1863	2584	48.44	1046	19.61	1096	20.54	434	8.13	164	3.07
1864	2176	44.48	938	18.97	1132	23.14	393	8.03	262	5.37
1865	1799	39.96	1024	22.61	1108	24.47	447	9.87	149	3.28
1866	843	24.52	951	27.66	1081	31.47	309	11.60	163	4.73
1867	887	22.90	1081	27.92	1118	28.88	625	16.14	169	4.10
Average, ..	1325	31.27	1013	25.58	1057	26.55	489	12.95	159	3.95

CLASS 1. *Zymotics*.—The total number of deaths recorded as belonging to this class is 887, or 22.90 per cent. of all deaths.

Diphtheria.—Whole number of deaths from this cause, during the year, is 73; last year, 190. Of these, 37 were males and 36 females. Thirty-two, or about one-half were under *five* years of age; and 21 were under *ten*. This disease reached the climax of its fatality in 1863, when 1,225 deaths were recorded. Since that period, deaths from this cause have gradually decreased, until it is now hardly more fatal than many other diseases and has ceased to be dreaded as a desolating epidemic. The pathology of the disease is now better understood, and its treatment more effective.

Scarlatina.—Twenty-one deaths are recorded from this disease, 15 males and 6 females, all of whom were under *ten* years of age. This is a much smaller number than in any previous year.

Dysentery.—The fatality from Dysentery is larger than last year. One hundred and seventy-four (174) deaths are recorded, against 139 last year, of which 73 were males and 101 females.

The number of deaths reported of this disease for the eleven years, 1857-67, the per cent. and average, are shown in the following table:

YEARS.	1857	1858	1859	1860	1861	1862	1863	1864	1865	1866	1867	Total
Whole Number	71	97	79	76	64	99	148	170	448	139	174	15.65
Per cent. of all deaths,.....	2.19	2.78	2.01	1.93	1.56	2.04	2.57	3.21	9.18	4.01	4.35

Average, for eleven years, 142, or 2.99 per cent. of the whole mortality.

One hundred and one (101) were under five years of age; 9 between 5 and 10; 34 between 10 and 60; 28 between 60 and 80. Twenty-one died during the first seven months of the year; 60 in August; 58 in September; 26 in October, and 7 during November and December. In the order of counties, the fatality was Rutland, 24; Washington and Franklin, each 22; Windsor, 20; Windham, 18; Chittenden, 15; Orange, 11; Orleans, 10; Lamoille, 8; Essex, 7; Addison and Bennington, each 6; Caledonia, 4, and Grand Isle, 1.

Typhoid Fever.—The whole number of deaths specially recorded from this cause are 190, of which 87 were males and 103 females. Of these, 48 occurred during the first seven months of the year; 19

in August; 43 in September; 37 in October; 32 in November, and 9 in December. Sixty-four were under 20 years of age; 33 under 30; 20 under 50; 36 under 60; 29 under 80, and 5 over 80. By counties: Rutland has the largest mortality, 35, and Essex the least, 1. Last year the number of deaths from this cause was 158. Of all classes of fevers designated in the Registration Reports, 286 deaths are recorded, or 7.38 per cent. Last year, 228, or 6.63 per cent.

Regarding all fevers as only different phases of the same disease, whether designated as Billious, Camp, Congestive, Typhus or Typhoid, we group them all together in the following table which shows the mortality and percentage of deaths from this cause during eleven years, 1857-67.

YEARS.	1857	1858	1859	1860	1861	1862	1863	1864	1865	1866	1867	Total.
Number,.....	174	161	251	239	188	411	551	325	573	228	226	3322
Percentage,.....	5.19	4.42	6.04	6.02	4.48	8.08	9.09	7.80	12.91	6.11	7.38

The average annual number of deaths from this cause is 313, or 6.6 per cent. of all deaths.

In order more fully to show the habitude of this disease, in regard to locality and fatality in different sections of the State, we give below a table showing its mortality by counties.

COUNTIES.	1857	1858	1859	1860	1861	1862	1863	1864	1865	1866	1867	Totals.	Average by counties
Addison,.....	10	7	21	21	10	32	41	18	35	13	12	220	20.
Bennington,.....	13	7	1	12	1	25	33	27	38	16	19	213	19.3
Caledonia,.....	24	13	21	16	9	46	34	13	40	14	28	238	23.
Chittenden,.....	11	8	11	13	17	36	47	22	39	23	19	241	21.
Essex,.....	6	1	2	2	1	1	6	1	1	21	1.9
Franklin,.....	13	8	11	17	11	18	32	27	38	17	19	211	19.
Grand Isle,.....	1	3	2	5	8	11	1	2	6	39	3.5
Lamoille,.....	2	4	11	16	10	23	16	15	31	8	18	154	14.

Windham,.....	14	10	35	33	28	27	75	42	70	21	30	375	34.
Windsor,.....	31	25	32	22	14	45	62	39	79	30	33	412	37.
Totals,.....	174	161	251	239	188	411	551	325	573	228	226	3322

An inspection of this table shows that the counties bordering upon the Connecticut river, exhibit the greatest mortality from fevers. Windsor, Orange and Windham rank highest on the list. Next in order is the interior county of Washington, then Rutland in the south western part of the State, and then Caledonia on the upper Connecti-

cut; Chittenden, Addison, Bennington and Franklin, on the eastern shore of Lake Champlain follow next in order. And last are Orleans, Lamoille, Grand Isle and Essex.

The largest proportion of deaths from this cause occurred in those months of the year, when the dense fogs are most prevalent along the borders of the Connecticut and the Lake. Whether the prevalence and mortality of fevers in those localities, depends upon the peculiar condition of the atmosphere, or the foul exhalations arising from the stagnant waters in the coves and low lands adjoining those bodies of water;—or whether, as Dr. Saulsbury claims to have proved they arise from the spores of *palmellæ*, a vegetable of the lowest order, resembling upon the earth an incrustation of saline matter or brick dust;—or whether, as Dr. Putnam, in Medical Transactions of Vermont for 1866, suggests, “fevers arise from foul exhalations about our homes,” are subjects eminently worthy of study and investigation, from which important results in a sanitary point of view might well be expected. We commend them to the attention of every Physician in the State.

Forty deaths from *Diarrhœa* are recorded, against 29 last year; 56 of *Cholera Infantum*, (last year 47), 39 of which occurred in August and September. Every county, save one, in the State reports deaths from this cause. *Puerperal Fever* caused the death of 14 persons, seven during the first five, and seven during the last four months of the year. Twenty-seven died of *Erysipelas*, 73 of *Whooping Cough*, last year 31. Deaths are reported from this cause in every month of the year, and in every county of the State save Essex;—23 were males and 50 females, and all save two were under five years of age. Seven deaths from *Cholera* are recorded, one each in Franklin, Orange, Rutland, Washington and Windham counties and two in Windsor county. *Privation* is credited with the death of 3 persons, two in Franklin and one in Orleans counties; *Intemperance* with one in Orange county, and *Delirium Tremens* which, last year, caused the death of two persons,—none,—a gain of 200 per cent.

CLASS 2. *Constitutional Diseases*.—The whole number of deaths recorded in this class is 1,081, or 27.92 per cent. In 1866, 951, or 27.66 per cent. In 1865, 1,024, or 22.61 per cent.]

Of the first order in this class, *Diathetic*, 227 deaths are recorded, or 5.86 per cent. of the whole, an increase of 29 over last year. Of these, 104, or 2.68 per cent., are recorded as of *Dropsy* and *Anemia*, 50 males and 54 females, last year 81. *Cancer* caused the death of 108 persons, 38 males and 70 females, every county being represented save Essex and Grand Isle. Of these, 2 were of the *Bowels*; 6 of the *Breast*; 5 of the *Face*; 1 of the *Mouth*, and 15 of the *Stomach*. Deaths from this cause are reported in every month of the year, average 9 each month. Of the second order, *Tubercular*, 854 deaths are reported, or 22.01 per cent. of the whole number of deaths. Of 18,—10 males and 8 females—from *Scrofula*, and 26—15 males and 11 females—from *Hydrocephalus*.

But of all the diseases which afflict the human race, no one proves destructive to so many lives as *Consumption*. An epidemic like *Cholera* and *Diphtheria* may sweep over the land, and carry off more in a given year, but none compares with *Consumption* in its annual ravages. Year after year it invades about the same number of households, and consigns about the same number of victims to an early grave. It takes the lead of all the long line of causes which arrest the current of life, not only in Vermont, but in twenty-one States of the Union. The whole number of deaths reported from *Consumption* by the U. S. Census of 1860, was 49,082, which is greater by 21,988 than that of any other disease mentioned. And if we connect with it all other descriptions of Lung disease, the deaths from these combined, largely outnumber any one other class in all the States and Territories of the Union, save Kansas, Nebraska and New Mexico, where fevers were most prevalent in 1860.

The number of deaths from *Consumption* in Vermont for the year ending December 31st, 1867, was 792, or 20.63 per cent. of all deaths. Of these, 332 were males and 460 females, a larger disproportion of the sexes than previously recorded. Deaths are reported from this disease from every county in the State, and in every month of the year. The number is larger by 80 than last year and larger by 37 than the average for eleven years, 1857-67.

A comparison of the annual mortality from this disease, with percentage, and ratio of living to one death, together with the same

statistics in relation to deaths from all tubercular diseases, will be found in the following table :

YEARS.	1857.	1858.	1859.	1860.	1861.	1862.	1863.	1864.	1865.	1866.	1867.	Tot'ls	Average.
No. of deaths.													
Consumption	785	738	734	777	783	751	783	690	766	712	792	8311	755
Percentage	24.11	21.18	19.37	21.27	20.15	16.48	14.68	12.06	16.92	20.71	20.63	18.37
Living to one Death,.....	401	427	429	405	402	419	402	456	411	442	397	417
All Tuberculous diseases.	848	792	820	866	835	785	846	723	801	753	854	8941	812
Percentage	25.33	22.73	22.24	23.7	22.02	17.45	15.86	14.98	17.60	21.09	22.06	20.56
Living to one Death,.....	370	397	384	364	389	401	372	429	393	418	352	391

An inspection of the above table shows that for the eleven years, 1857-67, the average annual number of deaths from Consumption was 755, or 18.57 per cent. of all the deaths and of all tubercular diseases, the annual average was 812, or 20.56 per cent. of all deaths.

Arranged by counties, the order of fatality from this disease is as follows:—Windsor, 101; Windham and Washington, each 90; Rutland, 86; Caledonia, 79; Orange, 67; Orleans, 66; Franklin, 65; Chittenden, 54; Bennington, 53; Addison, 50; Lamoille, 36; Grand Isle, 9; Essex, 8; or, if equally distributed, nearly 55 to each county.

Arranging the fatality by months in the same manner, we find it as follows:—April, 80; March, 79; May, 71; September, 70; August, 68; December, 62; October, November and January, each 60; July, 58; June, 57; February, 54. Thus, April shows the greatest fatality and February the least. Last year the greatest number died in March, and the least in October. Or, reckoning by quarters, we find the second and third quarters of the year exhibiting the greatest mortality—208 and 196 respectively, while the first and last quarters show the least—193 and 182 respectively. The average for each month of the year is 64.8. Between the ages of 20 and 30, there were 183 deaths, 68 males and 115 females, or one in 43 of all the deaths from this disease. Between 30 and 40, there were 139 deaths, 55 males and 84 females. By far the largest proportion of the deaths from this cause, for the last eleven years, occurred between these periods, embracing nearly one half of the whole number.

From these statements then it may be fairly concluded that,

in Vermont, Consumption is most likely to carry off its victims, before they arrive at the age of thirty years. It does its work of destruction in the prime and vigor of life. If, however, the consumptive tide over this period, he will hardly pass the next decennial. Beyond fifty, the number of deaths is less with only an occasional one at eighty.

The geographical distribution of Consumption is about equal through the counties of the State, in proportion to the population. Its distribution among the towns of the State would form an interesting subject for investigation, as bearing upon the opinion expressed by Dr. H. I. Bowditch, of Boston, "based upon very extensive observation, that *soil moisture* is chief among the causes of consumption in New England, and that localities quite near each other, and even in the same town and neighborhood, may, chiefly from this cause, be possessed of influences upon this disease quite opposed to each other." Dr. Bowditch's theory is a plausible one, and is strongly corroborated by inquiries made in England in 1865-6, into the "effect of drainage works and other sanitary regulations designed to promote the public health." In the progress of this inquiry, it was found "that the *drying of soil* which has in most cases accompanied the laying of main sewers in the improved towns, has led to the diminution, more or less, considerable of phthisis."

A similar investigation of the localities in this State, where consumption is most prevalent, might or might not corroborate the same opinion. In any event, it is a subject worthy of the study of the physician, especially since the attention of the medical profession is now turned so strongly in the direction of *change of climate* as a possible remedy for the disease, and since it affords so rich a field for the worthless nostrums of the quack.

CLASS 3. *Local Diseases*.—Of this class 1,118 deaths are recorded, or 28.88 per cent. Diseases of the *Nervous System* are the most fatal of this class. Four hundred and six (406) deaths are recorded, against 375 last year, an increase of 31. The average in this class for eleven years has been 353 annually.

Of the deaths in this order, 15 were from *Cephalitis*; 65 from *Apoplexy*, an increase of 19 from last year; 122 from *Paralysis*, last

year 101; 11 from *Epilepsy*; 50 from *Convulsions*, and 125 from *Brain Diseases*, &c.

Under *Diseases of Organs of Circulation*, 173 deaths from Heart Disease, &c., are recorded, an increase of 27 over last year. The records of the last eleven years show a small but gradual increase of deaths from this cause. The annual average is 147.

Under the head of *Respiratory Organs*, 314 deaths are recorded, against 290 last year. Of these, 273, 151 males and 122 females, are recorded as of *Pneumonia*, or 7.05 per cent of all deaths. This is an increase of 20 over last year. Of these, 84 were under five years of age; 84 were over 60; and 24 over 80. The month of greatest fatality was April, last year February, the smallest was July. Every county in the State is represented, Rutland having the largest number, 42, and Grand Isle the least, *one*. Last year, Windsor county ranked highest and Rutland was third in the list. This year, Windsor is second and Chittenden third. The greatest mortality occurred in the first quarter, 92; second quarter, 81; fourth quarter, 64; third quarter, 31. Thirteen deaths of *Lung Disease* are recorded, which, a strict classification, would probably place in the class *Pneumonia* or *Phthisis*. Eleven from *Pleurisy*; 6 by *Asthma*; 6 by *Bronchitis*, and 5 by *Laryngitis*.

CLASS 4. *Developmental Diseases*.—Under this class, 297 deaths from *Diseases of Children* are recorded, of which 82 are reported as *Stillborn*; 197 as *Infantile*, *Premature*, &c., and 8 as *Teething*. *Old Age* is assigned as the cause of 263 deaths, or 6.79 per cent. of the whole; last year, 247. Of these, 4 were under 70; 48 between 70 and 80; and 201 over 80. Five of the decedents were 100 and over;—125 were males and 138 females.

CLASS 5. *Violent Deaths*.—One hundred and sixty deaths are recorded in this class, of which 5 were *Homicide*; 24 *Suicide*, viz: *Drowning*, 3; *Hanging*, 9; *Shooting*, 2; not stated, 10. Of the 124 deaths from *Accident*, 4 were from *Fractures* or *Contusions*; 19 from *Burns* or *Scalds*; 4 *Poison*; 22 *Drowning*; 1 *Suffocation*, and 74 from the somewhat apocryphal cause *Otherwise*. Of 208, the cause is not specified.

Among what may be termed rare diseases, we find 4 deaths from

Cyanosis, or *blue disease*, 1 male and 3 females, all under *five years* of age; 1 from *Gallstones*, female; 1 from *Glanders*; 3 from *Hydrothorax*, 2 males and 3 females, all over 20; *Ileus* 2, males; *Intussusception* 1, male, over 40; *Malformations* 5, 3 males and 1 female; *Obesity* 1, female; *Spina Bifida* 1; *Sunstroke* 1; *Tetanus* 3, 2 males and 1 female; *Tubercular Meningitis* 1; *Want of Care* 2, both males, and under *five years* of age, one in Bennington and one in Windsor counties. We would give the town and school district, if the data were at hand; *Eating Honey* 1, female over 40 years of age.

DIVORCES.

The Secretary of State added, to the Tenth Registration Report, several tables, showing the number of Divorces granted by the Supreme Court, during the five years ending Dec. 31st, 1866, from which it appears that the whole number granted during that period was 571, or an average of one divorce to every 20 marriages. As a partial index to the domestic morals of a portion of the inhabitants of the State, these tables are valuable; but, as showing that divorces are becoming more frequent from year to year, they are creditable neither to the virtue, morality or christianity of the State. Ill assorted marriages will occur in every community, and if only such were divorced the number would probably be comparatively small, but the tables show that among the causes of divorce, *Wilful Desertion* ranks highest, numbering 248; *Adultery* next, 171; then *Intolerable Severity*, 131, while all other causes combined number only 21. During 1867, the whole number of divorces granted was 159, or one in 18; in 1866, it was 155, or one in 19 of all the marriages. Of these, the libellant, in 71 cases, was the husband, and in 88 the wife. Of the causes, *Wilful Desertion* has 62; *Adultery* 63; *Intolerable Severity*, 26; all others, 8. The counties rank as follows: Lamoille, one in 11 marriages; Rutland, one in 13; Washington and Windham, each one in 14; Chittenden, one in 15; Windsor, one in 16; Caledonia and Addison, each one in 20; Franklin, one in 27; Orange, one in 29; Orleans, one in 31; Grand Isle, one in 33; Bennington, one in 34, and Essex, one in 37. The average for all the counties is one to every *eighteen* marriages.

APPENDIX.

CLASSIFICATION OF DISEASES.

The following classification of the Causes of Death has been adopted for the Vermont Registration Reports, in order that they may conform as nearly as possible with those of other countries, thereby securing to them much greater value for the comparison of facts, both at home and abroad. It is that recommended by William Farr, Esq., M.D., of England, with the sanction and approval of the most eminent medical men of Europe, and adopted in Massachusetts, and will probably be used by many other States, as well as upon the European continent,

[NOTE.—The Latinized names of classes and of orders are derived from Greek roots, which may help the memory and suggest, but will never define the classes.]

CLASSES.

I. ZYMOTIC DISEASES :—*Zymotici*. (*Ζύμη*, leaven.)

Diseases that are either epidemic, endemic or contagious ; induced by some specific body, or by the want of sufficient nourishment or by the the bad quality of food.

II. CONSTITUTIONAL DISEASES :—*Cachectici*. (*Καχεξία*, bad habit of body.)

Sporadic diseases ; affecting several organs in which new morbid products are often deposited ; sometimes hereditary.

III. LOCAL DISEASES :—*Monorganici*. (*Μόνος*, alone, without others ; *Όργανον*, organ.)

Sporadic diseases, in which the functions of particular organs or systems are disturbed or obliterated, with or without inflammation ; sometimes hereditary.

IV. DEVELOPMENTAL DISEASES :—*Metamorphici*. (*Μεταμόρφωσις*, change of form.)

Special diseases, the incidental result of the formative, reproductive and nutritive processes.

V. VIOLENT DISEASES OR DEATHS :—*Thanatici*. (*Θαντάοι*, violent deaths)

Diseases which are the evident and direct results of physical or chemical forces, acting either by the will of the sufferer, of other persons, or accidentally.

ORDERS.

CLASS I.

1. *Miasmatic diseases* :—Miasmatici. (*Μίασμα*, stain, defilement.)
2. *Enthetic diseases* :—Enthetici. (*Ἐνθετος*, put in, implanted.)
3. *Dietic diseases* :—Dietici. (*Διαιτα*, way of life, diet.)
4. *Parasitic diseases* :—Parasitici. (*Παρασίτος*, parasite.)

CLASS II.

1. *Diathetic Diseases* :—Diathetici. (*Διάθεσις*, condition, diathesis.)
2. *Tubercular diseases* :—Phthisici. (*Φθίσις*, wasting away.)

CLASS III.

Diseases of—

1. *Nervous system* :—Cephalici. (*Κεφαλή*, head.)
2. *Organs of circulation* :—Cardiaci. (*Καρδιά*, heart.)
3. *Respiratory organs* :—Pneumonici. (*Πνεύμων*, lung.)
4. *Digestive organs* :—Enterici. (*Ἐντερον*, intestine.)
5. *Urinary organs* :—Nephritici. (*Νεφρός*, kidney.)
6. *Organs of generation* :—Aidoici. (*Αἰδοῖα*, pudenda.)
7. *Organs of locomotion* :—Myostici. (*Μῦς*, muscle ; *Ὅστέον*, bone.)
8. *Integumentary system* :—Chrotici. (*Χρῶς*, skin.)

CLASS IV.

1. *Developmental diseases of children* :—Paidiaci. (*Παιδιά*, youth.)
2. *Developmental diseases of women* :—Gyniaci. (*Γυνή*, woman.)
3. *Developmental diseases of old people* :—Geratici. (*Γῆρας*, old age.)
4. *Diseases of Nutrition* :—Atrophici. (*Ἀτροφία*, atrophy.)

CLASS V.

1. *Accident* :—Tychici. (*Τύχη*, chance.)
2. *Battle* :—Polemici. (*Πόλεμος*, a battle, fight.)
3. *Homicide* :—Androphonici. { *Ἀνὴρ*, man; *Αὐτός*, self; *Φονεῖω*,
4. *Suicide* :—Autophonici. { I murder, kill.)
5. *Execution* :—Demiotici. (*Δημιώτης*, executioner.)

STATISTICAL NOSOLOGY.

NOTE.—This page and those that follow contain two lists of causes of deaths. The first—that on the left side—may be called the **TABULAR LIST**, and comprises all the heads which it is proposed to admit into the complete tables, and under which ALL deaths, from whatever cause, must eventually be distributed. It represents those diseases which, under the same terms, or terms strictly synonymous with them, are found in practice to occur most frequently.

The **SUPPLEMENTAL LIST** is *subordinate* to the first, and contains the principal *special* diseases which it may be considered desirable to note. But it should be observed, that *every* case marked here is also to be enumerated under one or other head in the tabular list. The tabular heads under which it is proposed to place such special cases are shown by references in figures. The special cases are referred to those heads to which they are most nearly allied. It will be found that the special cases are few, and will not affect the larger numbers in the tables to any important extent.

CAUSES OF DEATH.

TABULAR LIST.	SUPPLEMENTAL LIST.
CLASS 1, ZYMOTIC DISEASES.	<i>Of Diseases of a Special Character, or rarely fatal.</i>
ORDER I.— <i>Miasmatic.</i>	
I. 1.—1. Smallpox, - - - - - 2. Measles, - - - - - 3. Scarlatina, - - - - - 4. Diphtheria, - - - - - 5. Quinsy, - - - - - 6. Croup, - - - - - 7. Whooping Cough, - - - - - 8. Typhus (and Infantile) Fever, - - - - - 9. Erysipelas, - - - - - 10. Metria (or Puerperal Fever), - - - - - 11. Carbuncle, - - - - - 12. Influenza, - - - - - 13. Dysentery, - - - - - 14. Diarrhoea, - - - - - 15. Cholera Infantum, - - - - - 16. Cholera, - - - - - 17. Ague, - - - - - 18. Remittent Fever, - - - - - 19. Rheumatism, - - - - -	I. 1.—1. Vaccination not stated. Variola. After Vaccination,, (Vario- loid.) Erysipelas, &c. after vac- cination. Chickenpox, (Varicella.) Miliaria. 2. Rubecola. 3. Angina Maligna. 4. Mumps. 5. Tonillitis. 6. Typhoid fever. 7. Phlebitis. Pyemia. Hospital gangrene. Erythema. 10. Childbed fever. 11. Anthrax. 17. Intermittent fever. 18. Yellow fever. 19. Rheumatism, with pericard- itis, or disease of heart.
ORDER 2.— <i>Enthetic.</i>	
I. 2.—1. Syphilis, - - - - - 2. Stricture of Urethra, - - - - - 3. Hydrophobia, - - - - - 4. Glanders, - - - - -	I. 2.—1. Gonorrhoea. Purulent ophthalmia. 4. Necrosis, (usually from dis- section wounds.) Malignant pustule.

TABULAR LIST.	SUPPLEMENTAL LIST.
CLASS I.—(Continued.)	
ORDER 3.— <i>Dietic.</i>	
I. 3.—1. Privation, - - - - - 2. Purpura and Scurvy, - - - - - 3. Delirium Tremens, } (Alcoholism. 4. Intemperance, }	I. 3.—1. Want of Breast Milk. 2. Rickets, Brouchocele.
ORDER 4.— <i>Parasitic.</i>	
I. 4.—1. Thrush, - - - - - 2. Worms, - - - - -	I. 4.—2. Porrigo. Scabies. Tape-worm. Hydatids.
CLASS II. CONSTITUTIONAL DISEASES.	
ORDER 1.— <i>Diathetic.</i>	
II. 1.—1. Gout, - - - - - 2. Dropsy and Anæmia, - - - - - 3. Cancer, - - - - - 4. Noma (or Canker), - - - - - 5. Mortification, - - - - -	II. 1.—3. Soft cancer. Sweep's cancer. Melanosis. Other kinds of cancer. Polypus (part not stated). Lupus. 5. Bed sore. Dry Gangrene.
ORDER 2.— <i>Tubercular.</i>	
II. 2.—1. Scrofula, - - - - - 2. Tabes Mesenterica, - - - - - 3. Phthisis (Consumption of Lungs), - 4. Hydrocephalus, - - - - -	II. 2.—1. Psoas abscess. Lumbar abscess. White swelling. Cretinism. 2. Tubercular peritonitis. 3. Hæmoptysis. 4. Tubercular meningitis.
CLASS III. LOCAL DISEASES.	
ORDER 1.— <i>Nervous System.</i>	
III. 1.—1. Cephalitis, - - - - - 2. Apoplexy, - - - - - 3. Paralysis, - - - - - 4. Insanity, - - - - - 5. Chorea, - - - - - 6. Epilepsy, - - - - - 7. Tetanus, - - - - - 8. Convulsions, - - - - - 9. Brain Diseases, * &c. - - - - -	III. 1.—1. Myelitis, Phrenitis. Cerebro-spinal Meningitis. 4. Fright. Grief. Melancholia. Rage. 6. Hysteria. 8. Laryngismus stridulus. 9. Neuralgia. Ophthalmia. Otitis. Disease of spinal marrow. Necrencephalus (Softening of Brain—Ramollissement).
ORDER 2.— <i>Organs of Circulation</i>	
III. 2.—1. Pericarditis, - - - - - 2. Aneurism, - - - - - 3. Heart Diseases,* &c. - - - - -	III. 2.—1. Carditis. Endocarditis. 3. Hypertrophia. Angina pectoris. Syncope. Arteritis. Hydropericardium.
ORDER 3.— <i>Respiratory Organs.</i>	
III. 3.—1. Epistaxis, - - - - - 2. Laryngitis, - - - - - 3. Bronchitis, - - - - - 4. Pleurisy, - - - - - 5. Pneumonia, - - - - - 6. Asthma, - - - - - 7. Lung Diseases,* &c. - - - - -	III. 3.—2. Oedema glottidis. 4. Empyema. Hydrothorax. Diaphragmitis. Pneumothorax. 5. Pulmonary apoplexy. Pleuro pneumonia. 6. Grindler's Asthma. Miner's Asthma. Emphysema.

*Other diseases of the brain, or diseases of the nervous system, not otherwise distinguished are, referred to this head. *Mutatis mutandis*, the note applies to the corresponding heads in other orders of this class.

TABULAR LIST.

CLASS III.—(Continued.)

ORDER 4.—*Digestive Organs.*

- 4.—1. Gastritis, - - - - -
2. Enteritis, - - - - -
3. Peritonitis, - - - - -
4. Ascites, - - - - -
5. Ulceration of Intestines, - - - - -
6. Hernia, - - - - -
7. Ileus, - - - - -
8. Intussusception, - - - - -
9. Stricture of Intestines, - - - - -
10. Fistula, - - - - -
11. *Stomach Diseases,* &c.,* - - - - -
12. *Pancreas Disease,* &c.,* - - - - -
13. Hepatitis, - - - - -
14. Jaundice, - - - - -
15. *Liver Disease,* &c.,* - - - - -
16. *Spleen Disease,* &c.,* - - - - -

ORDER 5.—*Urinary Organs.*

- 5.—1. Nephritis, - - - - -
2. Ischuria, - - - - -
3. Nephria, (Bright's disease), - - - - -
4. Diabetes, - - - - -
5. Calculus (Gravel, &c.), - - - - -
6. Cystitis, - - - - -
7. *Kidney Disease,* &c.,* - - - - -

ORDER 6.—*Generative Organs.*

- 6.—1. Ovarian Dropsy, - - - - -
2. *Disease of Uterus,* &c.,* - - - - -

ORDER 7.—*Organs of Locomotion.*

- 7.—1. Arthritis, - - - - -
2. *Joint Disease,* &c.,* - - - - -

ORDER 8.—*Integumentary System.*

- 8.—1. Phlegmon, - - - - -
2. Ulcer, - - - - -
3. *Skin Diseases,* &c.,* - - - - -

SUPPLEMENTAL LIST.

- III. 4.—1. Glossitis.
Stomatitis.
Pharyngitis.
Œsophagitis.
5. Perforation of—
6. Congenital.
Femoral.
Inguinal.
Scrotal.
Umbilical.
Ventral.
7. Constipation.
11. Dyspepsia.
Pyrosis.
Gastralgia.
Hæmatæmesis,
Melaena.
Hæmorrhoids.
14. Gall-stones.
15. Cirrhosis.
- III. 5.—3. Albuminuria.
6. Cystirrhœa.
7. Diuresis.
Hæmaturia.
Dis. of prostate.
Dis. of bladder.
- III. 6.—2. Orchitis.
Hydrocele.
Hysteritis (Inflammation of
Womb).
Ovarian tumor.
Uterine tumor.
Polytupus uteri.
- III. 7.—1. Ostitis.
Periostitis.
2. Fragilitas ossium.
Moll. ossium.
Caries.
Necrosis.
Exostosis.
- III. 8.—1. Abscess (part not stated.)
Boil.
Whitlow.
3. Roseola.
Urticaria.
Eczema.
Herpes.
Pemphigus.
Ecthyma.
Impetigo.
Psoriasis.
Ichthyosis.
Tumor (part not stated.)

See note under III. 1.—9.

TABULAR LIST.	SUPPLEMENTAL LIST.
CLASS IV. DEVELOPMENTAL DISEASES.	
ORDER 1.—Developmental Diseases of Children.	
IV. 1.—1. Stillborn, - - - - - 2. Premature birth, and Infantile De- bility, - - - - - 3. Cyanosis, - - - - - 4. Spina Bifida, - - - - - 5. Other Malformations, - - - - - 6. Teething, - - - - -	IV. 1.—2. Atelectasis. 5. Anus imperforatus. Cleft palate. Idiocy.
ORDER 2.—Developmental Diseases of Women.	
IV. 2.—1. Puerperia, - - - - - 2. Childbirth. (See Metris I. 1.—9.)	IV. 2.—3. Chlorosis. Climacteria. Menorrhagia. 2. Miscarriage. Abortion. Puerperal Mania. Phlegmasia dolens. Cæsarian operation. Extra uterine foetation. Flooding. Retention of Placenta. Presentation of placenta. Deformed Pelvis. Breast abscess.
ORDER 3.—Developmental Diseases of Old People.	
IV. 3.—1. Old Age, - - - - -	
ORDER 4.—Diseases of Nutrition.	
IV. 4.—1. Atrophy and Debility, - - - - -	
CLASS V.—VIOLENT DEATHS.	
ORDER 1.—Accident or Negligence.	
V. 1.—1. Fractures and Contusions,* - - - - - 2. Wounds, - - - - - 3. Burns and Scalds, - - - - - 4. Poison, - - - - - 5. Drowning, - - - - - 6. Suffocation, - - - - - 7. Otherwise, - - - - -	
ORDER 2.—Battle.	
ORDER 3.—Homicide.	
ORDER 4.—Suicide.	
V. 4.—1. Wounds, - - - - - 2. Poison, - - - - - 3. Drowning, - - - - - 4. Hanging, - - - - - 5. Otherwise, - - - - -	
ORDER 5.—Execution.	
V. 5.—1. Hanging, - - - - - Violent Deaths, not classed, - - - - - Sudden, cause unascertained, - - - - -	

NOTE.—Where a person is "found drowned," the coroners, as in some other cases, not always succeed in discovering whether the case is a suicide, a murder, or an accident. All such cases are classed under "accident or negligence." Cases of "infantile fever" classed with those of typhoid, relapsing, and other continued fevers, under one name "typhus." Cases of "rheumatic fever" are classed with "rheumatism;" of "hemorrhage" and "abscess," with the diseases of the organs affected. Cases of "neglect," "cold," except when the result of privation. (Class I. 3.—1.) are placed (with notes) der deaths by "accident or negligence." (V. 1.—7.) As "stricture of the urethra" is invariably the result of gonorrhoea, it is classed as I. 2.—2.

* Including "Railroad Accidents."

LAW OF THIS STATE

RELATING TO THE REGISTRY AND RETURNS OF BIRTHS, MARRIAGES AND DEATHS.

AN ACT RELATING TO THE REGISTRY AND RETURNS OF BIRTHS, MARRIAGES AND DEATHS.

SECTION 1. The clerks of the several towns of this State shall, annually, in the month of June, transmit to the Secretary of State a certified copy of their record of births, marriages and deaths, which have occurred in their respective towns during the year next preceding the first day of January. The births shall be numbered and recorded in the order in which they are received by the clerk. The record of births shall state in separate columns the date of the birth, the name of the child (if it have any), the sex of the child, the place of birth, name and surname of one or both the parents, residence of the parents, occupation of the father, and the time when the record was made. The marriages shall be numbered and recorded in the order in which they are received by the clerk. The record of marriages shall state in separate columns the date and place of marriage, the names and surnames of the groom and bride, the residence of each at the time of marriage, the age of each, occupation of the man, and time when the record was made. The deaths shall be numbered and recorded in the order in which they are received by the clerk. The record of death shall state in separate columns the date of the death, the name and surname of the deceased, the sex, condition (whether married or single), age in years, months and days, the place of death, the disease or apparent cause of death, the occupation, if a male over fifteen years of age, the place of birth, the name of the parents, and the time when the record was made.

SEC. 2. The clerks in the several school districts in each town shall, annually, in the month of February, ascertain, from actual inquiry or otherwise, all the births and deaths which have happened in their respective districts during the year next preceding the first day of January, together with such facts concerning the births and deaths as are required by the preceding section of this chapter, and shall make an accurate return thereof to the clerk of the town in which such school district is situated, on or before the first day of March; and the district clerk or other person or persons authorized to perform his duties and make such returns, shall be entitled to receive from the treasury of such town five cents for each and every birth and death so returned. And if such person shall neglect or refuse to make the returns required by this section, he shall be liable to a fine of not less than five dollars for each neglect or refusal.

SEC. 3. Every justice of the peace or minister of the gospel shall make a record of each marriage solemnized before him, and every clerk or keeper of records of the meetings wherein any marriage among the people called Friends, or Quakers, shall be solemnized, shall make a record of such marriage, together with all the facts relating to marriages required by the first section of this chapter; and such justice, minister or clerk, shall annually, in the month of February, or from time to time, return a copy of the record for the year next preceding the first day of January, to the clerk of the town in which the marriage was solemnized; and every such person who shall neglect or refuse to make the returns required by this section, shall be liable to a fine of not less than ten dollars for each neglect or refusal, to be recovered on the complaint of a grand juror of such town.

SEC. 4. The clerk of each town shall be entitled to receive from the treasury of the town five cents for recording each birth, death and marriage; provided, said clerk shall comply with the provisions of this chapter in all respects.

SEC. 5. It shall be the duty of the clerks of the several towns to make such distribution of the blank forms of returns as shall be designated by the Secretary of State.

SEC. 6. The Secretary of State shall, at the expense of the State,

prepare and furnish to the clerks of the several towns in this State, blank forms of suitable quality and size, to be used as books of records, according to the provisions of this chapter, and also blank forms of returns, as hereinbefore specified, and shall accompany the same with such instructions and explanations as may be necessary and useful.

SEC. 7. Every physician who shall have been in attendance upon any deceased person, shall leave with the town clerk a certificate containing the name of the disease or cause (if known) of such death, within fifteen days after the interment of the deceased. Any such medical attendant who shall neglect or refuse to give the certificate required by this section, shall, for such offense, pay a fine of three dollars, for the use of the town where such offense shall be committed.

SEC. 8. It shall be the duty of the Secretary of State to receive the returns made in pursuance with the first section of this chapter, and he shall cause the same, at the expense of the State, for each year to be bound together in one or more volumes, with indexes thereto; and with such assistance as may be voluntarily rendered by any authorized committee, appointed by the Vermont Medical Society for that purpose, prepare therefrom such tabular results as will render them of practical utility, and make a report thereof annually to the Legislature, and generally shall do whatever may be required to carry into effect the provisions of this chapter.

SEC. 9. The Secretary of State shall cause prosecutions to be commenced, in the name of the State, in an action on the case, founded on this chapter, to recover any penalty or forfeiture imposed by any provisions therein.

AN ACT IN AMENDMENT OF SECTIONS ONE, TWO AND THREE OF CHAPTER SEVENTEEN OF THE GENERAL STATUTES, RELATING TO REGISTRY AND RETURNS OF BIRTHS, MARRIAGES AND DEATHS.

SECTION 1. That chapter seventeen, section two, of the General Statutes, shall be amended by striking out of the ninth line in said section the word "March," and by inserting therein the word "February," and that the word "February," in the second line, be stricken out, and the word "January" inserted.

S^{EC}. 2. That from the third section of the same chapter there shall be stricken out the word "February," and inserted therein the word "January."

S^{EC}. 3. That from the first section of the same chapter there shall be stricken out the word "June," and the word "March" inserted.

S^{EC}. 4. This act shall take effect from its passage.

Approved, November 15th, 1866.

TWELFTH REPORT
TO THE
LEGISLATURE OF VERMONT,
RELATING TO THE
REGISTRY AND RETURNS
OF
Births, Marriages & Deaths,
IN THIS STATE,
FOR THE
YEAR ENDING DECEMBER 31ST, 1868.

PREPARED UNDER THE DIRECTION OF
GEORGE NICHOLS, Secretary of State.

RUTLAND:
TUTTLE & CO., PRINTERS.
1870.

IN SENATE, November 17, 1868.

On motion of Senator William R. Hutchinson, the Twelfth Annual Report relating to the Registry and Returns of births, marriages and deaths for the year ending December 31st, 1868, communicated by the Secretary of State, was ordered to be printed, and the Secretary directed to procure the printing of one thousand copies for the use of the General Assembly.

HENRY CLARK, *Secretary*.

REPORT.

STATE OF VERMONT,

OFFICE OF SECRETARY OF STATE, }
NORTHFIELD, Oct. 1st, 1869.

To the General Assembly :

In compliance with the requirements of the laws of the State, I have the honor to transmit herewith the Twelfth Annual Report, relating to the Registry and Returns of Births, Marriages, Divorces and Deaths that have occurred in the State during the year ending December 31st, 1868.

For the first time since the system of Registration was established in Vermont, returns have been received from every town in the State, though perhaps not in all cases with that fullness and accuracy of detail that is especially desirable in a work of this character; yet an important point has been gained, and now with an increase of the persistent determination that has characterized former efforts, aided by the salutary provisions of an act, entitled "An Act relating to the fees of School District Clerks," approved Nov. 19, 1868, it is confidently expected that more desirable results will be obtained. The attention of your Honorable Body is respectfully solicited to the urgent necessity of a better and more judicious law relating to marriages. Under the present code, records of marriages are so imperfectly made, that the primary object for which such laws were enacted—the preservation and consequent perpetuation of facts that should surely and satisfactorily establish questions of legal descent and inheritance—is oftentimes rendered so obscure, that the benefits expected are never realized.

The present, as compared with former reports, is more complete with all matters pertaining to a proper Registration. This fact may be attributed to the recognition which the State, as well as individuals, are giving the subject, and when the State shall have fully thrown around the present system its strong support, we may hope to add to the field of science and scientific pursuits a valuable contribution; a contribution that shall reflect honor upon our Commonwealth, and credit upon those who first conceived and shall have developed it.

In addition to the ordinary matter comprising the Annual Reports, there have been added tables of Meteorological Observations, made, and kindly furnished for this Report, by Professor MCKENDREE PETTEE, of the University of Vermont and State Agricultural College, which cover a period embracing a greater portion of the time since the Registration Reports of this State were established. The relation

IV. TWELFTH REGISTRATION REPORT. [1868.

which atmospheric influences may sustain to the vital statistics of the State, is one of deep interest, and must open a wide field for investigation, and certainly the observations themselves cannot fail to impart a very great addition to the value of these Reports.

Again is the State indebted to the pen of Dr. L. C. BUTLER, the worthy and efficient Secretary of the State Medical Society, for the interesting and highly practical deductions made from the tabulated statistics that comprise this Report.

To the consideration of all those who do not believe in the alleviation of suffering simply, but in a proper knowledge of human development, modified by the various influences that exist in communities, this report is commended.

Respectfully submitted,

GEORGE NICHOLS,
Secretary of State.

Comparison with Massachusetts and Rhode Island,	100

MARRIAGES.

Whole number in 1867,	100
Table showing the number for the last twelve years, with the ratio to the population and average,	101
Social condition in life and ages of those married,	101

DIVORCES.

Whole number,	101
Ratio of divorces to marriages,	102
Causes of divorce,	102

ARTS.	PAGES.
Whole number in 1867,	102
Table showing the whole number for the last eleven years, with the percentages and the ratio of the living to the dead,	102
Average number of deaths annually,	102
Comparison of mortality between east and west counties of the State, in tabular form,	102
Comparison by counties, with death rate for each,	103
Comparison by large towns with number of deaths to population,	103
Comparison by cities of the State,	103
Comparison of birth rate and death rate in the State for twelve years, also of Massachusetts and Rhode Island,	104
Average age of decedents,	104
Sex, nativity and season,	104
CAUSES OF DEATH.	
Table showing fatality from each class of diseases, with percentage of the whole during twelve years,	105
Table showing the number of deaths from sixteen principal causes, from 1857 to 1868 inclusive, with order of fatality,	106, 107
Remarks upon different diseases,	108
Diphtheria, its relative position,	108
Scarlatina, "	108
Dysentery, " "	108
Fevers, their rank in the list,	108
Order of fatality by counties,	109
Where fevers are most prevalent in the State,	109
Connection between fevers and decomposition of organic substances,	109
Decaying vegetables in cellars, influence of, on fevers,	110
Infantile diseases, their increase,	110
Shall the increase be ascribed to the weather?	110
Dr. E. M. Snow upon the subject,	111
Causes of Stated,	111
Old age. number of decedents in 1868,	112
Pneumonia, its rank "	112
Time of greatest fatality from it.	112
Consumption, number of decedents in 1868,	112
Disproportion of sexes	113
Comparison of annual mortality, percentage of deaths, etc., tubercular diseases,	113
Order of counties in fatality,	114
Comparison of east and west portions of the State, by counties,	114
Comparison of lake and river counties,	114

VIII. TWELFTH REGISTRATION REPORT. [1868.

	PAGES.
Comparison of interior and south-western counties,	115
Mortality in each county in proportion to population,	116
Conclusions reached,	116
Comparison with Massachusetts and Rhode Island,	116, 117
Results of investigation stated,	117, 118
Mortality from various other diseases,	118

APPENDIX.

Classification of diseases,	121
Statistical Nosology,	123
Law of this State relating to the Registry and Returns of Births, Marriages and Deaths,	127

REGISTRATION
OF
BIRTHS, MARRIAGES AND DEATHS
IN
VERMONT
FOR
THE YEAR ENDING DECEMBER 31, 1868.

METEOROLOGICAL OBSERVATIONS.

The relation of atmospheric changes, the fall of rain, or the temperature of the air, to the mortality of the State, is a subject of inquiry which has not hitherto been discussed in these reports. Its importance as an element in the causation and cure of disease, is becoming more evident. Time and space will not allow us to enter into this discussion in the present report, further than to present the data upon which future investigation may be founded, and, for this purpose, we lay before the inquiring reader the following tables, comprising a summary of daily observations of the Temperature, Moisture, Weight, Direction and Condition of the Atmosphere for eleven of the twelve years covered by these Registration Reports. These observations were made at Burlington, on College Hill, at an elevation of 277 feet above Lake Champlain, and 367 feet above the level of the ocean, in Latitude $44^{\circ}27'$; Longitude $73^{\circ}10'$, by PROF. MCKENDREE PETTY, of the University of Vermont, to whom many thanks are due for the time and labor spent in preparing them for publication in this report:

"The observations," Prof. Petty writes, in a note accompanying the tables, "are with the Standard Thermometer, and not with the Max. and Min. Instruments, so-called. Hence the monthly range of Thermometer would be rather more than given by these figures.

"Also the Barometer averages are not of the *observed* heights, but of those heights reduced to a standard temperature of 32° Fahrenheit. This makes the reduced heights generally less than the observed."

The years 1858 and '59 are not complete, but contain all the averages of those years in Prof. Petty's possession. The Rain and Snow record is only complete since the beginning of 1860.

FOR THE YEAR 1858.

SUMMARY OF OBSERVATIONS.

For the first time in the history of Registration in the State of Vermont, the Summary of Observations now made, is based upon returns from every town in the State. For this result we are indebted to the determination and energy of the excellent Secretary of State.

GENERAL SUMMARY.

The tables embodied in this report show that during the year ending Dec. 31, 1868, the whole number of births in the State was (7,510) seven thousand five hundred and ten ; of which three thousand eight hundred and seventy-three (3,873) were males, and three thousand six hundred and five (3,605) were females. Of (32) thirty-two the sex is not stated.

During the same period two thousand nine hundred and sixty-one (2,961) couples, or five thousand nine hundred and twenty-two (5,922) persons were married ; a number greater, by 104 couples, or 208 persons than was reported in 1867.

The number of deaths for the same period was four thousand four hundred and fifty-five ; (4,455) of which twenty-one hundred and ninety-three (2,193) were males, and two thousand two hundred and twenty-two (2,222) were females. Of forty (40) the sex is not given.

Compared with 1867 the number of births was 1,042 greater, and 1,106 greater than in 1866. The deaths were 367 greater than in 1867 ; when 4,088 were reported, and 604 greater than in 1866.

The population of the State being 315,098 by the census of 1860, there was during the year, one birth to every 42.05 of the inhabitants, against one to every 48.7 for 1867 ; and one to every 48.2 for 1866. One person in every 53.2 was married during the year, against one in every 55.1 for 1867 ; and one in every 50.8 for 1866. There was one death to every 70.7 persons living, against one to every 77 in 1867, and one to every 82 in 1866.

In Rhode Island there was one birth, in every 36.1; one person married in every 39.5, and one death in every 64 of the population. In Massachusetts, one birth in 36.14; one marriage in 43.8, and one death in 55.6 of the inhabitants.

The average number of births daily was 20.57, against 17.72 in 1867; the number of marriages was 8.11 daily, against 7.82 in 1867, and 9.43 in 1866; and of deaths 12.2, against 11.2 in 1867, and 10.52 in 1866.

The average age of those who died was 37.42, against 38.14 in 1867, and 38.48 in 1866. The average for twelve years 1857-68 is 35.22, ranging from 29.22 in 1864 to 38.48 in 1866.

BIRTHS.

Passing now to a more particular investigation of the Statistics of the Twelfth Registration Report, we group together in the following table the number of births registered during the past twelve years 1857-68, together with the birth rate, population to one birth, and number of each sex for each year.

YEARS.	WHOLE NO.	BIRTH RATE.	POP. TO 1 BIRTH.	MALES.	FEMALE.
1857	6412	2.04	49.1	3282	3071
1858	6477	2.06	48.6	3294	3142
1859	6545	2.11	47.7	3351	3155
1860	6451	2.05	48.8	3225	3186
1861	6567	2.08	48.	3354	3170
1862	5505	1.75	57.2	2831	2650
1863	5369	1.70	58.7	2719	2624
1864	4753	1.68	61.	2439	2264
1865	5353	1.69	58.8	2761	2564
1866	6532	2.07	48.2	3376	3113
1867	6468	2.05	48.7	3372	3144
1868	7510	2.06	48.6	3873	3605
Totals,	73,942			37,812	35,688
Average Annual,		1.94	51.95	3151	2974

The total number of births in twelve years, as appears from the above table, is 73,942, which exceeds the number of deaths in the same period by 22,109. The average annual number of births is 6,161, which is 1,842 more than the average annual number of deaths

in the same period. The excess of births over deaths in 1868, is 3.035; or 59.3 deaths to each one hundred births.

The birth rate for the year was 2.06 or one birth to every 48.6 of the people of the State. The average for the twelve years is 1.94.

Sex.—The returns for the year show the birth of 3873 males and 3,605 females, or in the ratio of 1,074 males to 1,000 females, which is greater than for 1867, when it was 1,040 males to 1,000 females, and less than in 1866.

The proportion of the sexes born in the State for the years 1857-68 inclusive is as follows

YEARS.	1857.	1858.	1859.	1860.	1861.	1862.	1863.	1864.	1865.	1866.	1867.	1868.
Males to each 100 Females.	106.8	104.8	106.2	100.1	105.8	106.8	103.2	107.7	107.6	108.1	104.	107.4

The average for twelve years is 105.7 males to each 100 females, a slight variation only from 1866.

In Rhode Island the proportion for 1867 was 107.7 male to 100 females, and for 14.7-12 years covered by the Registration Reports of that State, the average was 106.3 males to 100 females, a slightly larger proportion than that of Vermont.

In Massachusetts for the sixteen years covered by the registration of that State, the average was within a fraction of our own State. In 1867 the proportion was 104.2 males to each 100 females, and from 1852 to 68, inclusive it was 105.9 males to each 100 females.

The following table shows the numbers of each sex by counties with ratio of males to females.

COUNTIES.	Males.	Females.	Males to 100 Females.	COUNTIES.	Males.	Females.	Males to 100 Females.
Addison, ---	264	262	100.7	Lamoille, ---	140	132	106.
Bennington, -	275	294	93.5	Orange, -----	229	249	92.

Orange	"	"	"	"	"	"	53.2	"	"

Season. The largest number of births occurred in October (703); next in order are September, July, August, May, November, June, March, December, April, February. The smallest number was in January (492), last year in March. The number for the third quarter is largest (2,035); next in rank is the fourth (1,949), then the 2nd (1,867), and the first (1,602). The births in the first six months of the year, exceed those in the last six by 515.

The following table shows the number, for each quarter, for the years 1857-68 inclusive.

Years.	1st Quarter	2d Quarter	3d Quarter	4th Quarter	Years.	1st Quarter	2d Quarter	3d Quarter	4th Quarter
1857	1369	1565	1709	1710	1863	1258	1376	1391	1287
1858	1414	1573	1683	1525	1864	1478	1274	1376	1692
1859	1447	1642	1703	1988	1865	1174	1380	1385	1349
1860	1464	1561	1733	1621	1866	1246	1603	1839	1735
1861	1439	1577	1743	1735	1867	1432	1646	1676	1636
1862	1223	1061	1285	1365	1868	1602	1867	1949	2035
Totals	8,356	8,979	9,856	9,944	Totals	8,190	9,146	9,616	9,094

The aggregate for the first six months of the year is 34,671; for the last six months 38,510, the difference 3839; thus establishing the recognized fact, that a larger number of children are conceived in Vermont in the six months of cold weather, than in the six months of warm weather. The same is true in Massachusetts and Rhode Island. The reverse is the case in England, the aggregate for seven years, 1860-66, showing that 51.7 per cent. of the whole number of

births, occurred in the first half of the year, against 48.3 per cent. for the last half.

The explanation given for this result, so uniform through all the years of these reports, by the author of the Rhode Island summary, viz: that in that State, and Massachusetts "the births are collected only once in the year, in January," and that "some births in the earlier part of the year, are lost by the removal or forgetfulness of parents," does not afford, in our opinion, a satisfactory solution of the problem, especially with reference to Vermont. For in this State the statistics of registration are not gathered by Town, but by District Clerks;—this sub-division of labor tending to make them more accurate, by requiring them to be obtained by "actual inquiry or otherwise." The duty of the Town Clerk is to forward the aggregated returns to the Secretary of State. The explanation given in the Massachusetts report, affords a more rational solution of the problem, viz: that it lays in the social customs of the people, whatever they may be, rather than in natural laws.

Plural Births. One hundred and twenty plural births are recorded, of which five were triplets. Of these births 70 were males and 50 females. This is one to every 62.5 of all births.

The following table exhibits the number of these births, during the years 1857-68, inclusive; also the sex, and number of all births:

YEARS.	1857	1858	1859	1860	1861	1862	1863	1864	1865	1866	1867	1868
Number, - - - -	95	141	115	144	135	95	106	62	58	132	130	120
Males, - - - - -	52	70	78	73	78	44	61	40	36	71	71	70
Females, - - - -	43	71	37	71	57	51	45	22	22	61	59	50
No. to one Birth, -	131	91	113	89	96	115	101	148	184	98	99	62.5

Average for twelve years 111.

Illegitimates. Fifty cases are recorded, of which 32 were males, and 18 females. Last year 40 cases were reported.

The number of these births and their proportion to all births for twelve years 1857-68, inclusive, is shown in the following table:

YEARS.	1857	1858	1859	1860	1861	1862	1863	1864	1865	1866	1867	1868
Number, - - - -	53	51	62	53	37	59	32	39	40	40	50	
Males, - - - - -	24	26	25	25	18	24	12	16	19	21	32	
Females, - - - -	28	25	36	28	17	32	20	22	20	19	18	
No. to all Births,	108	121	104	123.8	152.9	91	148.5	137	163	161.7	150.2	

An average of one to every 143.3 of all births during the twelve years, and of 43 to each year.

In Massachusetts, 281 of these births were registered in 1866, and 299 in 1867, or one to every 124.8, and 120.6 of all births, respectively. In Rhode Island there are no illegitimates noted, a remarkable evidence of pure morals, if none occurred.

In connection with this subject the question has been mooted, as to the influence of religion upon national morality. It has been supposed that the number of illegitimate births, in any country, was an indication not only of its morality, but also of its prevalent religion. This question has been subjected to statistical analysis, so far as European Countries are concerned, and the results are given to the public in a very valuable work, entitled: "*L'Europe Politique et Sociale*" by M. Maurice Block. The *Pall Mall Gazette* London, gives the following resumé of the statistics furnished by M. Block:

"Of all European countries, that in which by far the greatest relative number of natural children is born, is Bavaria, a country of which two thirds of the people are Catholic, and excessively Catholic, and in which the "confessional" is more of a real institution than almost anywhere else. In Bavaria the illegitimate births amount to 20.7 or nearly 21 per cent. of the whole.

"Next come Saxony and Wurtemberg; the first exclusively, the second chiefly, Protestant. In these illegitimate births amount to 15 and 11.7 per cent. respectively.

"In Sweden and Norway (Protestant), they are 9.3 and 9.2; in Austria (very Catholic), 8.9.

"Next to these comes a list of countries, comprising, in fact, the greater part of Europe, in which the illegitimate birth-rate is singularly uniform; nowhere much below seven per cent., and nowhere attaining eight. These are—taken in order of immorality, beginning with the worst—Belgium, Russia, Italy, France, Prussia, England. Of Ireland there are, we believe, no trustworthy returns, but common opinion makes it rank very favorably in this respect.

"Below the countries thus enumerated, and therefore the least exceptionable of all, come Catholic Spain with 5 1-2 per cent, and, last, Protestant Holland with only 4 per cent. which thus attains the European "prize of virtue."

"These diversities are very far from admitting of easy or, indeed, any explanation from such materials for knowledge as we possess. Something is due to legal institutions. For instance, the three German countries which rank worst on the list all possess peculiarly restrictive codes of marriage laws, which restrict honorable matrimony and render irregular but durable connections—"wild marri-

ages," as the Germans oddly but expressively called them, more common than they would otherwise be. And the same obstructive legislation prevails more or less in other continental countries. But this has no relation to religious questions. And the simple conclusion which we wish to draw is, we conceive, undeniable, that it cannot be proved, or rendered probable, that the religion prevailing in any European country, taken apart from other causes, influences at all the number of illegitimate births."

To the searcher after other causes for the prevalence of this social evil, than the real one—the innate depravity of the human heart—these inquiries and statistics will have a peculiar interest; but they only demonstrate more plainly, that this evil prevails largely in all countries, in all climes, and under all forms of religion, and religious institutions.

Stillborn. The number recorded for this year is 156, a large increase over 1867; when 82 were reported. This is one to every 48.2 births. In 1867 the proportion was one to every 78 births. In 1866 one to every 72 births. The increase in 1868 may be accounted for in part, no doubt, by the large increase of births over former years.

Parentage. Of the whole number of births 5064, or 67.41 per cent. are recorded as American, 2,216 or 29.50 per cent. as Foreign, and 230 as unknown. Last year the per cent. was 69.68 American, to 25.74 Foreign. In 1866 the proportion was 66.97 American; 26.39 Foreign.

The following table shows the parentage of all the children born in the State, whose parentage was recorded during the years of 1857–68 inclusive, with per cent. of each to population of each class. The population of Vermont, by the U. S. Census of 1860, was divided as follows: American 282,365; Foreign 32,743.

PARENTAGE.	1857	1858	1859	1860	1861	1862	1863	1864	1865	1866	1867	1868

Population, For. -	41.	49.	50.	46.	47.	40.	36.	31.	40.	52.	50.	65.

Average American for twelve years, 14.9.

Average Foreign for twelve years, 45.5.

The proportion of both American and Foreign births has increased during the past year, and both have reached a much higher point than at any period within the twelve years; still the latter outstrips the former. The foreign element is increasing more rapidly than the American. The births among the Foreign population, were last year, three to one of the native element, this year they are nearly *four* to one; an increase which is not accounted for by emigration—for Vermont is not a State towards which the swelling tide of Foreign emigration tends—but by natural generation.

In Massachusetts, during ten years, 1849-58, there was a relative and rapid increase of children born of Foreign parents; during the five years 1859-63, this increase continued, but with diminished rapidity; during the three following years, 1864-66, the relative increase of Foreign births ceased. In 1867 it revived, and is attributed to the increase of Foreign emigration into that State. The proportions for 1867 were 42.36 American, and 48.75 Foreign. In Boston the proportion was still greater; being American 1673, Foreign 3758, or more than two to one.

In Rhode Island, in 1867, the percentage of children born of Foreign parents, was 46.46, against 44.28 American. And for the five years, 1863-67 the percentages were 45.18, of the latter, to 46.37 of the former, whilst from 1858-62, the proportion was 48.50 American, to 44.33 Foreign.

The facts thus presented indicate that the largest relative increase of population in these three States, Mass. R. I. and Vt., from natural causes, comes from the Foreign element in our midst. It should not be overlooked.

MARRIAGES.

The number of marriages recorded is 2,961 couples or 5,922 persons. This is greater by 104 couples, or 208 persons than last year, and greater than has been reported in any year save 1866. Of these marriages, 4,419 are recorded, as of Americans, 815 as of Foreigners, and 688 as unknown. The latter class has been reduced from last year, more than one thousand.

The following table shows the number of marriages during each of the twelve years 1867-68, with the ratio to the population, and average for the whole period:

YEARS.	1857	1858	1859	1860	1861	1862	1863	1864	1865	1866	1867	1868	Total '57-'68	Aver. '57-'68
Marriages,	1941	2315	2169	2179	2188	1962	2007	1804	2560	3001	2857	2961	27,913	2,329
No. of Per.	2682	4630	4338	4358	4376	3934	4014	3008	5135	0002	5714	5922	65,886	4,658
Ratio of Pop.	81	68	73	72	72	80	78	87	61	52	55	53		69.3
American,	1812	2764	2646	2838	3074	2818	2674	2316	2948	3442	3441	4419	35,212	2,934
Foreign, -	290	392	394	380	376	332	430	272	464	549	419	865	5,163	480
Unknown,	1780	1474	1298	1120	926	774	910	1020	1726	2011	1783	698	15,510	1,292

The counties rank as follows: Rutland, Windham and Windsor equal; Franklin, Orleans, Orange, Washington, Chittenden, Addison, Caledonia, Bennington, Lamoille, Essex, Grand Isle. The months as follows: November, December, October, September, January, March, February, August, July, June, April, May.

The number of marriages in the first quarter was 710; second quarter 565; third do. 688; fourth do. 979. The ratio of marriages to the population is one to 106, or one person married to every 53 persons living. The average for twelve years 1857-68 is one to 112.3, or one person married to every 56.1 living. Last year the proportion was somewhat larger.

Of all the marriages recorded, 2,093 were the first of both parties, and of these, 70 persons under 20, married 57 maids under 20, and 13 under 35.; 1035 under 25, married 518 under 20, 454 under 25, and 54 under 35. Three persons under 60, married maids under 45. One hundred and forty five bachelors married widows; 342 widowers married maids, and 225 widowers married widows. Nineteen of these latter were over 70 years of age, and married widows over 60 years of age.

In 910 instances, (last year, 796,) the bride was under 20 years of age; in 75 instances the groom was under 20, (last year, 76). In 58 instances, (last year, 57,) both parties were under 20. Twenty-four men and four women were over 70. Four widowers over 70 married maids over 35, 40, and 45 respectively.

The increase of marriages during 1868 in which the maids were under 20 years of age, will be specially noted. The bulk of this increase, we think, will be found among the foreign population, who proverbially marry at an earlier age than the American.

Connected with this subject is that of

DIVORCES.

During the year 1868, the whole number of divorces granted by the courts of Vermont, was 167, or one in 17.7 of all the marriages.

In 1867 it was 159, or one in 18 of all marriages. In 1866 it was 155 or one in 19. In 64 cases the libellant was the husband; in 103 cases the wife. The increase in the number of divorces granted will be noticed, and indicates a laxity of morals which is truly alarming.

Of the causes of divorce, willful desertion has 73; adultery is mixed up with 53; intolerable severity, 35, all other causes 24. Among the latter, two were "null and void," and one, States Prison. In Essex County no divorces were granted by the Court. The counties rank as follows: Grand Isle one in six of all marriages, Bennington one in twelve, Rutland one in 13.4 Lamoille one in 13.7, Windsor one in 14, Washington one in 15.9, Orleans one in 16.8, Chittenden one in 17, Addison one in 19.4, Orange one in 19.8, Caledonia one in 23, Franklin one in 23.6, Windham one in 36.

DEATHS.

The whole number of deaths during the year ending Dec. 31 1868, was 4,455, which is 367 greater than in 1867, and 615 greater than in 1866. It is 116 greater than the average for twelve years 1857-68.

The following table shows the whole number of deaths during twelve years, ending with 1868, with percentages and ratio of deaths to the living, and the average age of those who have died:

YEARS.	1857	1858	1859	1860	1861	1862	1863	1864	1865	1866	1867	1868	Total	Aver.
No. Deaths.	3512	3581	3725	3897	4038	4336	5710	5293	4838	3841	4038	4455	54,888	4,319
Per cent.	1.11	1.13	1.18	1.23	1.28	1.53	1.81	1.71	1.54	1.21	1.50	1.42		1.33
Liv. to 1 death	89	87	84	81	78	65	55	58	65	82	77	70		
Average Age.	38.28	36.57	36.55	35.44	35.53	30.65	31.01	29.22	35.38	38.48	36.76	38.14		34.5

The average annual number of deaths for the past twelve years is 4,319, or one to every 70 of the population.

Instituting now a comparison between the east and west portions of the State, as divided by the Green Mountain range, we group the results in the following table:

COUNTIES—EAST SIDE.		COUNTIES—WEST SIDE.	
Caledonia,	270	Addison,	323
Essex,	95	Bennington,	234
Lamoille,	132	Chittenden,	439
Orange,	343	Franklin,	336
Orleans,	252	Grand Isle,	49
Windham,	426	Rutland,	529
Washington,	347		
Windsor,	529		
Total,	2,394	Total,	2,619

The population of the east side of the Mountain, is 176,778. The deaths are one in every 73.8 of the inhabitants, and the death-rate is 1.35. The population of the west side is 139,135. The deaths are one in 68.8, of the inhabitants, and the death-rate is 1.52. The east side of the Green Mountain is in this comparison, therefore, the healthiest part of the State.

Continuing the comparison by counties, the death-rate for each is as follows:—Addison 1.34; Bennington 1.34; Caledonia 1.25; Chittenden 1.77; Essex 1.64; Franklin 1.23; Grand Isle 1.14; Lamoille 1.07; Orange 1.38; Orleans 1.32; Rutland 1.47; Washington 1.26; Windham 1.40; Windsor 1.44. From this comparison it appears that the healthiest county in the State is Chittenden on the West side of the Mountain range. The county in which the largest proportional number of deaths to the population occurs, is Lamoille, an interior county. The average death-rate for all the counties is 1.58. The average for the eastern division is 1.34, for the western division is 1.38; showing but a very small per cent. in favor of the eastern division.

Comparing again a few of the larger towns of the State, we find their healthfulness to rank as follows: Woodstock has one death in every 76 of its population; Castleton has one in 75; Springfield has one in 73; Northfield one in 69; Middlebury one in 67; Montpelier one in 65; Rockingham one in 64; Brattleboro one in 63; St. Johnsbury one in 58; Rutland one in 55; St. Albans one in 52.7; Brandon one in 52; Bennington one in 47.

Comparing finally, the cities of the State, we find that in the city of Burlington, one in every 40.8 of the inhabitants died in 1868, while in the city of Vergennes there was one death to each 1286 of its population, a condition of healthfulness as astounding as it is gratifying, if the returns are correct. Cities are proverbially unhealthy. The city of Burlington exhibits a larger proportionate mortality than any town in the State, containing an equal number of inhabitants. But Vergennes is an exception to all the cities of the known world. One death only(?) in each 1286 of its inhabitants. We cease all further comparisons.

The number of deaths during the year is equal to 1.41 per cent. of

the population. Last year it was 1.29. The average for twelve years 1857-68 is a fraction more than 1.36. Comparing this with the birth rate for the year which is 2.38, (last year 2.05,) we reach the very gratifying result that the birth-rate, has exceeded the death-rate by 0.97 per cent. (last year 0.76 per cent.) and exceeded the average death-rate, for twelve years, by 1.02 per cent.

In Massachusetts the death-rate for 1867 is 1.79, for 1866 1.86. In Rhode Island the death-rate for 1867 was 1.56.

If these figures are correct, the conclusion is fair that the duration of life in Vermont is increasing.

Ages. The ages are given of 4,415 of those who died during the year, leaving 40 whose ages are not stated. The average age of the decedents was 37.42, being greater than it was in 1867 when it was 36.76; less than in 1866 when it was 38.48; but greater than in any year previous, and greater than the average for twelve years 1857-68, which is 35.10. The decedents under one year of age were 874 showing a large increase of mortality at this period of life, over any year included in the registration reports of the State. Between one and two years the number was 214; between two and three 109; between 3 and 5, 174. Between 10 and 20, the decedents were 263; between 20 and 30, 331; 30 and 40, 292; 40 and 50, 262; 50 and 60, 283; 60 and 70, 478; 70 and 80, 556; 80 and 90, 337; 90 and 95, 53; 95 and over 23. Four deaths are recorded, of persons one hundred years old and upwards, three males and one female.

Sex. Of all the decedents, 2,193 were males, and 2,222 females, an excess of 29 females, against 108 last year.

Nativity. Three thousand eight hundred and seventy-six were of American parentage and 360 Foreign. Unknown 219. The latter class are diminishing in numbers, and will finally disappear from the reports, as the registration laws are more thoroughly enforced.

Season. The order of months in fatality is as follows: August, 490; September, 484; March, 404; April, 394; July, 374; October, 352; November, 342; December, 341; February, 336; May, 320; January, 300; June, 288. In 1867 the largest number of decedents, was in September, 471; the least in February, 265. The order of

quarters is third, first, fourth, second ; last year third, fourth, second, first.

The figures show slight variations from year to year, but the general rule is established with considerable exactness, the latter part of the year generally exhibiting the greatest mortality.

CAUSES OF DEATH.

We again have the satisfaction of recording the fact, that no desolating epidemic has swept over the State during the year, and yet, the number of deaths has largely increased. This increase pertains to all the classes of disease, save constitutional ; the largest being in the class local.

The number of decedents in the Developmental class, largely exceeds that of any year included in these reports, and is deserving of notice, and comment. The following table exhibits the fatality from each class, with the percentage of the whole during twelve years, ending Dec. 31 1868.

YEARS.	Zymotic.		Constitutional.		Local.		Developmental.		Violent.	
	Deaths.	Per cent.	Deaths.	Per cent.	Deaths.	Per cent.	Deaths.	Per cent.	Deaths.	Per cent.

In order that the variations in fatality of the principal diseases that are prevalent in the State may be presented before the reader at a single glance, we group them together in the following table ; in which Consumption will be noticed as taking the second place in the list, in only three of the twelve years, and then only in the presence of an epidemic,—Diphtheria :

The following Table gives the number of Deaths in the State from each of sixteen principal causes, and the order of fatality in each, for the twelve years, 1857 to 1868, inclusive.

1857.	1858.	1859.	1860.	1861.	1862.

Taking the foregoing table as our guide we will now pass in review several of the more prominent diseases mentioned therein, without regarding their particular nosological arrangement.

Diphtheria.—The deaths from this cause have been decreasing from year to year since it reached its climax in 1863. It stands at the head of the column in 1864, fifth in 1865, and fifteenth in 1868. The number of decedents for 1868 is 47, of which 20 were males and 27 were females. Twenty-three, or about one-half, were under five years of age.

Scarlatina.—This disease was second on the list in 1857–58. In 1867 it was sixteenth. For this year it is the eighth, and the decedents from this cause number 110; of which 52 were males and 57 females, and 1 unknown. Of these, 81 were under five years of age and 23 between 5 and 10. The largest number of decedents was in Rutland County, 34; the next in Chittenden Co., 15; then Washington and Addison Counties.

Dysentery.—The number of decedents from this cause is much less this year than last, but it occupies the same place in the column that it did in 1867—the seventh. The fatality from it is 124, or 2.91 per cent. of all deaths. Of the decedents 59 were males and 65 females. The total number for twelve years, 1857–68, is 1,689, or an annual average of 140. By far the largest proportion of decedents (73) were under five years of age; 3 were between 5 and 10; 9 were between 60 and 70; 12 between 70 and 80, and 13 over 80. Twenty-two died in the first seven months of the year; 54 in August, 37 in September, and 11 in the remaining months of the year. In the order of counties, according to population, the rank is as follows: Grand Isle, Addison, Chittenden, Caledonia, Orange, Orleans, Windsor, Washington, Essex, Lamoille, Bennington, Windham, Rutland, Franklin.

Fevers.—During the years in which Diphtheria led the train of mortality in the State, Fevers ranked third in the list. When in 1865 that disease subsided, Fevers ranked *second*, but in 1866 they were fourth, and in 1867 the fifth, and during 1868 were *fourth* again in the list: the number of deaths being 276, of which 129 were males and 147 were females. The total number of deaths from this cause

during twelve years, 1857-68, is 3,658, or an annual average of 305.

The order of fatality from this disease, and number of deaths in the different counties of the State for the eleven years, 1857-67, with the average, and also for 1868, are shown in the following table :

COUNTIES.	Total 1857-67	Average.	COUNTIES.	Total, 1868.
Windsor, ----	412	37.	Rutland, ----	34
Orange, ----	398	36.	Windham ----	30
Windham ----	375	34.	Washington --	26

Grand Isle, --	39	8.5	Essex, ----	7
Essex, ----	21	1.9	Grand Isle, --	2
Total, ----	3382		Total, ----	265*

An inspection of the foregoing table shows that, for the eleven years, the greatest mortality from fevers was in the counties bordering upon the Connecticut River. In 1868, the order is somewhat reversed, Rutland taking the lead instead of Windsor, and the counties on the West side of the mountains exhibiting the greatest number of decedents. But this reversal is more apparent than real, for, taking the twelve years, 1857-68, together, and the order of fatality is precisely the same as for the eleven years, thus contributing to establish a rule in the State for the prevalence of fevers, viz., that the counties bordering on Connecticut River are more subject to them than the counties bordering upon Lake Champlain.

The close connection between fevers, especially of the types known as Typhus and Typhoid, and decomposition of organic substances, with their accompanying filth and putridity, is now well understood.

*The classification here is not exact;—less decedents being reported under the “classified arrangement” of Table VIII. than under “Causes of Deaths” in the same table.

So, also, the fact that the prevalence of these diseases in any locality may be checked, if not entirely arrested, by a due regard to cleanliness and drainage. In this connection, it may be suggested whether the common practice of storing vegetables in cellars under the sleeping apartments of dwellings may not directly conduce to the induction of fevers. Upon this subject the members of the Massachusetts State Board of Health express their opinion most emphatically, and we place it on record as eminently sound and worthy of consideration. They say :

" 1st. That while such vegetables are *entirely* free from decay, the practice is probably harmless.

" 2d. It is perfectly certain that decaying vegetable matter gives rise, in a way which science has not yet fully explained, to exhalations which are poisonous, that they taint the air with which they are in contact, that they seem to invite the attack of epidemics, that they diminish the power of the body to resist disease of every kind, and that they are especially favorable to the production of fevers.

" 3d. That the air of a cellar cannot be prevented from passing throughout the building under which it is placed.

" For these reasons we are of opinion that the practice of storing the produce of the farm in the cellars of dwelling-houses, is always attended with danger, and ought to be given up, since the utmost care is required in the course of our long winters to prevent decomposition from taking place."

Infantile.—The mortality from diseases classed under this head ranked *thirteenth* in the list for 1866. Thence it rose to the *fourth* in 1867, and to the *third* in 1868. Of these decedents the sexes were in the ratio of 121 to 104. The greatest fatality was in September, 34; next in August, 29.

The great increase of mortality among the children of our State ought to arrest the attention, especially of physicians, and lead to a thorough investigation into the causes, and the application of the appropriate remedy. It ought also to awaken interest among all those who have charge of children, as parents or guardians, for nearly one-fifth of all the deaths recorded in the State are among children under five years of age. Besides, those classed as "Infantile," "Cholera Infantum," "Diarrhœa," "Dysentery," etc., carry off large numbers every year. How far this mortality should be ascribed to the weather is a problem not easy to solve; yet we have elsewhere all the facts brought to light by the Meteorological

observations in our possession. Investigation in this direction will repay all our labor. In commenting upon this subject, Dr. E. M. Snow, the able Registrar of Providence, R. I., suggests that "summer complaints" are charged with more mischief than is their exclusive due, and that lung fever, convulsions, and congestive diseases of the brain and other organs, destroy far more children than Cholera Infantum and Diarrhœa. But he thinks "the chief cause of Infantile mortality is not more the weather, or foul air, than the ignorance and false pride of the mothers. Children are killed by the manner in which they are dressed, and by the food that is given them, as much as by any other causes. Infants of the most tender age, in our changeable and rough climate, are left with bare arms and legs, and with low necked dresses. The mothers in the same dress would shiver and suffer with cold, and expect a fit of sickness as the result of their culpable carelessness; and yet the mothers could endure such a treatment with far less danger to health and life than their tender infants."

The same destructive practice prevails to a considerable extent in this latitude, and, no doubt, contributes largely to mortality among children. Fashion rules in this matter as in others, and its victims are numbered by hundreds. The child of poverty lives and grows up strong and athletic, while the child of wealth, whose tender infancy is confided to a nurse and the bottle, and who is seldom permitted to nestle in a mother's bosom, and draw from her the only food that ought to be given it, wastes away in Consumption, runs its life out in Diarrhœa or Cholera Infantum, or sinks into the grave in Convulsions. Fashion rules; it is imperative. The mother must not be deprived of Society by the advent of the baby. It is beneath her dignity or her position to give herself up to nursing babies. She loves her child, but not enough to give it, perhaps, the only chance it has of life. She cannot be troubled with it. And so, very soon, her heart is wrung with grief, as she lays her baby in the grave. But the lesson is as soon forgotten.

Old Age.—Passing from one extreme to the other, we notice how regularly old age appears in the list as the cause of death; never first, but sometimes second, then third and fourth, always holding a

place quite near Consumption and Pneumonia. During 1868, there were 241 decedents from Old Age, 118 males and 123 females—177 of which were over 80 years of age.

Pneumonia.—In four of the twelve years covered by these Registration Reports, Pneumonia has occupied the second place in the record of mortality. In only one year has it gone below the fourth. During 1868, the number of decedents was 350, or if we add to this 22 who are recorded as dying from "Lung Disease," we have 372 as the number of its victims. The average annual number of decedents for twelve years, 1857-68, is 252. The gradual increase of deaths from this cause from 1857 to 1864 will be noticed, the average of those years being 231.7; and also the still more rapid increase for the next four years, showing an average of 243. This disease attacks people of all ages, but spends its force upon the extremes of age, comparatively few dying in middle life. Of the deaths recorded, 185 were males and 165 females. Of these 103 were under five years of age; 100 were over 60; 25 were over 80, and only 23 between 20 and 30. The order of fatality by months was May, April, February, January, November, December, May, October, September, June, August, July. The counties range as follows: Rutland, Chittendon, Windsor, Orange, Windham, Franklin, Addison and Bennington, Caledonia, Washington, Orleans, Lamoille, Essex, Grand Isle. The greatest mortality occurred in the first quarter, 146; next in the second, 107; then the fourth and third, thus following and establishing the general rule in Pneumonia, that the greater proportion of deaths from it occur in the first and second quarters of the year.

Consumption.—How tenaciously Consumption holds its place as first among the causes of death! Seasons seem to have no influence over it, nor do epidemic tendencies affect it. In three of twelve years the epidemic Diphtheria outnumbered it in fatality; but the numbers of its own victims were scarcely lessened, and when that terrible disease subsided, Consumption again led the van.

During the year under review, 728 decedents, or 14.88 per cent. of all deaths, are reported, of which 281 were males and 445 were females. The number is less by 64 than last year, when it was

792. Every county in the State is represented, and deaths occurred in every decade of years, from five to "over eighty." Thirty-three were under 5 years of age, and 33 were over 80; 85 were between 70 and 80; 66 between 60 and 70; 68 between 50 and 60; and 430 between 20 and 40. Of these latter 283 were between 20 and 40, thus confirming the long established rule that the larger proportion of the decedents from this disease are taken from middle life, when the dangers of childhood are passed, and life begins to open with all its fairest promises of happiness and success. The large disproportion of the sexes will be specially noticed, and the fact is pressed upon our consideration as revealed, by these annual Registration Reports, that this disproportion is increasing from year to year. Three years ago the difference was 90; this year it is 164.

A comparison of the annual mortality from this disease, with percentage of all deaths, and ratio of living to one death, together with the statistics in relation to deaths from all tubercular diseases will be found in the following

TABLE :

YEARS.	1857	1858	1859	1860	1861	1862	1863	1864	1865	1866	1867	1868	Tot'l's	Aver.
No. of deaths														
Consumption . . .	785	738	731	777	783	751	789	690	766	712	796	731	9049	754
Percentage. . .	24.11	21.18	19.37	21.27	20.65	16.43	14.68	12.06	16.92	20.71	20.63	14.88	18.58
Living to one														
Death	401	427	429	405	402	419	402	456	411	442	397	432	418
All Tuberculous														
Diseases	848	793	820	866	835	785	840	733	801	753	854	821	9762	821

Living to one														
Death	370	397	384	364	389	401	373	429	399	418	352	335	...	396

An inspection of the foregoing table shows that for the twelve years, 1857-68, the average annual number of deaths from Consumption was 754, or 18.58 per cent. of all deaths; and of all tubercular diseases, 821, or 20.40 per cent. of all deaths.

The following table will show the order of the counties in fatality, from this cause, taking the population of 1860 as the criterion :

COUNTIES.	Popula- tion 1860	Deaths 1857-67	Average Ann. No deaths.	1 Death to pers'n living.	COUNTIES.	No. Deaths 1868	1 Death to pers'n living.
Essex, - -	5786	93	8.4	62.2	Lamoille, -	514.3	22
Franklin, -	27231	571	51.9	47.6	Bennington,	498.	39
Orleans, - -	18985	425	38.6	47.	Rutland, -	492.4	73
Grand Isle,	4276	91	8.2	46.9	Grand Isle,	475.	9
Chittenden,	28171	608	55.2	46.3	Washington,	468.	59
Rutland, -	35946	892	72.9	44.8	Essex, - -	445.	13
Addison, -	24010	583	53.	41.2	Caledonia, -	443.	49
Bennington,	19426	480	43.6	40.4	Windsor, -	442.8	84
Washington,	27612	709	64.6	38.9	Orleans, - -	441.	43
Lamoille, -	12311	322	29.2	38.2	Addison, -	421.	57
Windsor, -	37193	1128	102.5	33.8	Franklin, -	412.7	66
Caledonia,	21708	662	60.	32.7	Orange, -	385.4	66
Orange, -	25455	880	75.4	30.6	Windham,	374.7	72
Windham,	37193	1006	91.4	26.7	Chittenden,	343.5	82

It will be seen from this table that Essex County heads the list for the eleven years, 1857-67, and Lamoille County for the year 1868. No county retains the rank it held in the general average for eleven years, in the estimate for one year.

Taking, now, the geographical division of the State by its vertebral column—the Green Mountains—we find that the Western Division, comprising Bennington, Rutland, Addison, Chittenden, Franklin and Grand Isle, with a population of 139,060, reported 3,135 deaths during 11 years, or an annual average of 285, or one in every 443 persons living; and during 1868, 326 deaths, or one to every 426 persons living. During the same period the Eastern Division, comprising the counties of Windham, Windsor, Orange, Caledonia and Essex, with a population of 117,124, reported 3,719 deaths from Consumption, or an annual average of 310.8, or one in every 314 persons living; and during the year 1868 the same counties reported 284 deaths, or one in every 412 persons living.

Taking again the division of the State by counties bordering on Lake Champlain on the West, and Connecticut River on the East, we find that the four Lake counties, Addison, Chittenden, Franklin and Grand Isle, having a population of 83,688, lost by Consumption during eleven years 1853 persons, or an annual average of 451, or one in 45 persons living; and during 1868, 214, or one in every 391 of the population. The River counties, during the same period, lost one in every 310.8 of the inhabitants; and during the year 1868, one in every 412 persons living. The difference is favorable to the Lake

counties, yet not so marked as to afford any tenable ground for superior exemption from the ravages of this disease.

During the same period the interior counties, Washington, Lamoille and Orleans, having a population of 58,904, reported 1,456 decedents from this disease, or one to every 40.5 of the inhabitants, or an average of 132.4 per annum; and during the year 1868, 124 decedents, or one to every 462 of their population. At the same time the Southwestern counties, Rutland and Bennington, with a population of 55,482, reported 1,282 deaths from Consumption, or one in every 43.2 persons living, or an annual average of 116.5; and during the year 1868, 112 decedents, or one to every 495 persons living.

Grouping, now, these several calculations in a table, where they can be comprehended at a glance, they arrange themselves as follows :

EASTERN COUNTIES.—*Population*, 117,124.—Windham, Windsor, Orange, Caledonia, Essex. No. of deaths, 1857–67, 3,719. Annual average, 310.8. Deaths to one living, 31.4. No. of deaths in 1868, 284. Deaths to one living, 41.2.

WESTERN COUNTIES.—*Population*, 139,060.—Bennington, Rutland, Addison, Chittenden, Franklin, Grand Isle. No. of deaths, 1857–67, 3,135. Annual average, 285. Deaths to one living, 44.3. No. of deaths in 1868, 326. Deaths to one living, 426.

LAKE COUNTIES.—*Population*, 83,688.—No. of deaths, 1857–67, 1853. Annual average, 451. Deaths to one living, 45. No. of deaths in 1868, 214. Deaths to one living, 39.1.

RIVER COUNTIES.—*Population, &c.*, same as Eastern Counties, above.

INTERIOR COUNTIES.—*Population*, 58,904.—Washington, Lamoille, Orleans. No. of deaths, 1857–67, 1,456. Annual average, 132.4. Deaths to one living, 40.4. No. of deaths in 1868, 112. Deaths to one living, 43.5.

SOUTHWESTERN COUNTIES.—*Population*, 55,482.—No. of deaths, 1857–67, 1,282. Annual average, 116.5. Deaths to one living, 43.2. No. of deaths in 1868, 112. Deaths to one living, 49.5.

Or, taking each county by itself, we find the result to be as follows :

Addison	has one death from Consumption to every	37.5 persons living.
Bennington	" " " "	37.4 " "
Caledonia	" " " "	30.5 " "
Chittenden	" " " "	40.7 " "
Essex	" " " "	54.6 " "
Franklin	" " " "	42.7 " "
Grand Isle	" " " "	42.7 " "
Lamoille	" " " "	35.9 " "
Orange	" " " "	28.4 " "
Orleans	" " " "	40.5 " "
Rutland	" " " "	41. " "
Washington	" " " "	35.9 " "
Windham	" " " "	25. " "
Windsor	" " " "	30.6 " "

Taking these tables, therefore, as the basis for our calculations, we reach these conclusions : 1. That the Lake counties have less of Consumption than the River counties—the former reporting an average of one death to every 40.9 of their inhabitants, the latter one to every 36.2. 2. That the Southwestern counties have less of that disease than the Interior counties—the former having an average of one death to every 39.2, and the latter one to every 37.4 of their population. 3. That throughout the State the geographical distribution of Consumption is very nearly equal in proportion to the population. No portion of the State is so far exempt from its ravages as to prefer a very strong claim for peculiar healthfulness in this respect. And, 4. That Consumption is not increasing in the State. The population of the State, by the census of 1870, may prove to be stationary, or increased but slightly, if at all, yet the decedents from Consumption are about the same in number for each of the twelve years, 1857–68, the maximum being 796, the minimum 690, and the average being 754.

The statistics of Massachusetts show that the mortality from Consumption does not increase with the population of that State, but that the number of decedents from it has been diminishing from year to year for the last fifteen years. The actual saving of life during the last five years of that period is shown to be 3,220 persons, or 644 in each year, an improvement which is a subject of congratulation, and which the writer of the "Report" for that State, for 1867, attributes to "*the advance of medical science, which has given to*

physicians a better knowledge of the nature of the disease, derived from pathology ; a better mode of treatment, derived from the careful observation of cases, and from modern discoveries in chemistry and physiology ; and a greatly improved acquaintance with the means by which Consumption may be arrested by those predisposed to it by inheritance." And yet, in Massachusetts, the number of deaths from Consumption during the fifteen years, 1853-67, averaged 4594, per annum, ranging from 4,269 to 4,750. The larger proportion of this mortality occurred in the seaboard counties.

The statistics of Rhode Island show that there are remarkable differences in the percentage of deaths from Consumption in different years and in different portions of the State. There is less of that disease in proportion to the population, in the insular towns of Bristol and Newport counties, and in the shore towns of Washington County, than in Providence city, or in the inland towns of Providence County. The climate of the towns first mentioned is damp, while that of the hilly towns of the latter is drier. The percentage of the first three counties named was 14.26, 15.33 and 16.92 respectively, and of the latter 18.68. The annual average mortality from Consumption in Rhode Island for nine years, 1860-68, was 520, the maximum being 559, the minimum 498. Thus, amid all the theories and speculations as to the cause of the prevalence of Consumption in the New England States, none of them reaches the point of materially lessening the number of its victims. Each State may show a variation in mortality from year to year, but never so marked as to afford any just ground for confidence that Consumption will not continue to be the leader of the vast army of diseases "that flesh is heir to."

Still, much good has resulted from these investigations. More is known to-day of the pathology, therapeutical indications, and of the means of prevention of Consumption, than the most learned physicians of fifty years ago ever dreamed of. The subtle elements which enter into its true pathology, may elude research for many years yet to come ; but practical experience, based upon investigations already made, confirm the opinion that "fresh pure air by day and by night ; strong and nourishing food ; dry soil on which to live ; proper exercise in the open air ; warm clothing at all seasons,

especially in the winter ; with proper medication, are the means of saving many lives which would have been hopelessly lost in the preceeding generation."

Passing on to the consideration of other diseases, of less prominence in the record of mortality, we find 37 decedents reported from *Diarrhæa* (last year 40,) 23 males, and 14 females, 17 of which were under 5 years of age, and 4 over 80. The decedents from *Cholera Infantum* were 100,—last year 56—65 males, 35 females. Of these, the largest number occurred in Rutland County ; 34 died in August, 32 in September, and 19 in July. Every county in the State reports deaths from this cause, save Grand Isle. *Puerperal Fever* caused 13 deaths. Twenty-six died of *Whooping Cough*, 22 of which were under five years of age. *Cholera Morbus* is charged with the death of 4 persons. *Privation* is set down as the cause of 4 deaths, 2 in Bennington county, and one each in Orleans and Washington counties. *Intemperance* increases the number of its victims four-fold over last year, and *Delirium Tremens* has the same as last year. Among constitutional diseases, we find decedents are reported from *Dropsy* in every month of the year, the largest being in November, the next in March, and the least in January. The number reported is 108, 41 males, and 67 females. Every county in the State is represented, save Grand Isle, the largest number being in Rutland county, (18) the smallest in Essex county, (2). Of the decedents from *Cancer*, (110), 40 were males and 70 females. Two were of the *Bowels* ; 10 of the *Breast* ; 8 of the *Face* ; 1 of the *Hand* ; 2 of the *Liver* ; 19 of the *Stomach* ; 1 of the *Throat*, and 2 of the *Womb*. The large majority were over 40 years of age, 20 were over 70, and 13 over 80. Twelve deaths are recorded from *Canker*, all under five years of age. *Scrofula* numbers 31, 15 males, 16 females. *Hydrocephalus* 28.

In the class of *Local Diseases*, the most fatal are diseases of the *Nervous System*, which number 458 decedents against, 406 last year. Grouping all *Brain Diseases* together, the decedents number 252 only three less than last year. Of *Heart Disease*, 220 cases were recorded, an increase of 47 over last year. Eleven deaths are recorded of *Bronchitis*, and 12 from *Pleurisy*.

In the class of *Accidents* 148 decedents are reported, viz. : 11 by *Fractures* and *Contusions* ; 14 *Burns* and *Scalds* ; *Drowning* 35 ; *Suffocation* 4 "Otherwise" 82, a term which we hope to see displaced in the enumeration.

Of novelties in disease, we find *Tetanus* 1 ; *Cyanosis* 2 ; *Cardiac Dyspnoea* 1 ; *Endermic injection*, 1 ; *Grief* 1 ; a female under 30 years of age ; *Intussusception* 1 ; *Leprosy* 1 ; *Leucocythemia* 1 ; *Malformation* 1 ; *Ovarian Dropsy* 2 ; *Placenta Previa* 1 ; *Spina Bifida* 2 ; *Sunstroke* 21, a large increase over any year reported, and traceable to the extreme heat of the summer ; *Want of Care* 3 ; one under 5 years of age, one under 30, and one under 50.

APPENDIX.

CLASSIFICATION OF DISEASES.

The following classification of the Causes of Death has been adopted for the Vermont Registration Reports, in order that they may conform as nearly as possible with those of other countries, thereby securing to them much greater value for the comparison of facts, both at home and abroad. It is that recommended by William Farr, Esq., M.D., of England, with the sanction and approval of the most eminent medical men of Europe, and adopted in Massachusetts, and will probably be used by many other States, as well as upon the European continent,

[NOTE.—The Latinized names of classes and of orders are derived from Greek roots, which may help the memory and suggest, but will never define the classes.]

CLASSES.

I. ZYMOTIC DISEASES :—*Zymotici*. (*Ζύμη*, leaven.)

Diseases that are either epidemic, endemic or contagious ; induced by some specific body, or by the want of sufficient nourishment or by the bad quality of food.

II. CONSTITUTIONAL DISEASES :—*Cachectici*. (*Καχεξία*, bad habit of body.)

Sporadic diseases ; affecting several organs in which new morbid products are often deposited ; sometimes hereditary.

III. LOCAL DISEASES :—*Monorganici*. (*Μόνος*, alone, without others ; *ὄργανον*, organ.)

Sporadic diseases, in which the functions of particular organs or systems are disturbed or obliterated, with or without inflammation ; sometimes hereditary.

IV. DEVELOPMENTAL DISEASES :—*Metamorphici*. (*Μεταμόρφωσις*, change of form.)

Special diseases, the incidental result of the formative, reproductive and nutritive processes.

V. VIOLENT DISEASES OR DEATHS :—*Thanatici*. (*Θαντάοι*, violent deaths)

Diseases which are the evident and direct results of physical or chemical forces, acting either by the will of the sufferer, of other persons, or accidentally.

ORDERS.

CLASS I.

1. *Miasmatic diseases* :—Miasmatici. (*Μίασμα*, stain, defilement.)
2. *Enthetic diseases* :—Enthetici. (*Ἐνθετος*, put in, implanted.)
3. *Dietic diseases* :—Dietici. (*Δίαιτα*, way of life, diet.)
4. *Parasitic diseases* :—Parasitici. (*Παράσιτος*, parasite.)

CLASS II.

1. *Diathetic Diseases* :—Diathetici. (*Διάθεσις*, condition, diathesis.)
2. *Tubercular diseases* :—Phthisici. (*Φθίσις*, wasting away.)

CLASS III.

Diseases of—

1. *Nervous system* :—Cephalici. (*Κεφαλή*, head.)
2. *Organs of circulation* :—Cardiaci. (*Καρδιά*, heart.)
3. *Respiratory organs* :—Pneumonici. (*Πνεύμων*, lung.)
4. *Digestive organs* :—Enterici. (*Ἐντέρον*, intestine.)
5. *Urinary organs* :—Nephritici. (*Νεφρός*, kidney.)
6. *Organs of generation* :—Aidoici. (*Αἰδοῖα*, pudenda.)
7. *Organs of locomotion* :—Myostici. (*Μῦς*, muscle; *Ὄστέον*, bone.)
8. *Integumentary system* :—Chrotici. (*Χρῶς*, skin.)

CLASS IV.

1. *Developmental diseases of children* :—Paiidiaci. (*Παιδιά*, youth.)
2. *Developmental diseases of women* :—Gyniaci. (*Γυνή*, woman.)
3. *Developmental diseases of old people* :—Geratici. (*Γῆρας*, old age.)
4. *Diseases of Nutrition* :—Atrophici. (*Ἀτροφία*, atrophy.)

CLASS V.

1. *Accident* :—Tychici. (*Τύχη*, chance.)
2. *Battle* :—Polemici. (*Πόλεμος*, a battle, fight.)
3. *Homicide* :—Androphonici. { *Ἀνὴρ*, man; *Αὐτός*, self; *Φονεῖω*,
4. *Suicide* :—Autophonici. { I murder, kill.)
5. *Execution* :—Demiotici. (*Δημιώτης*, executioner.)

STATISTICAL NOSOLOGY.

NOTE.—This page and those that follow contain two lists of causes of deaths. The first—that on the left side—may be called the **TABULAR LIST**, and comprises all the heads which it is proposed to admit into the complete tables, and under which **ALL** deaths, from whatever cause, must eventually be distributed. It represents those diseases which, under the same terms, or terms strictly synonymous with them, are found in practice to occur most frequently.

The **SUPPLEMENTAL LIST** is *subordinate* to the first, and contains the principal *special* diseases which it may be considered desirable to note. But it should be observed, that *every* case marked here is also to be enumerated under one or other head in the tabular list. The tabular heads under which it is proposed to place such special cases are shown by references in figures. The special cases are referred to those heads to which they are most nearly allied. It will be found that the special cases are few, and will not affect the larger numbers in the tables to any important extent.

CAUSES OF DEATH.

TABULAR LIST.		SUPPLEMENTAL LIST.	
CLASS 1, ZYMOTIC DISEASES.		<i>Of Diseases of a Special Character, or rarely fatal.</i>	
ORDER 1.— <i>Miasmatic.</i>

ORDER 5.—Execution.	
V. 5.—1. Hanging, - - - - - Violent Deaths, not classed, - - - - - Sudden, cause unascertained, - - - - -	

NOTE.—Where a person is "found drowned," the coroners, as in some other cases, do not always succeed in discovering whether the case is a suicide, a murder, or an accident. All such cases are classed under "accident or negligence." Cases of "infantile fever" are classed with those of typhoid, relapsing, and other continued fevers, under one name, "typhus." Cases of "rheumatic fever" are classed with "rheumatism;" of "hemorrhage" and "abscess," with the diseases of the organs affected. Cases of "neglect" and "cold," except when the result of privation. (Class I. 3.—1.) are placed (with notes) under deaths by "accident or negligence," (V. 1.—7.) As "stricture of the urethra" is almost invariably the result of gonorrhœa, it is classed as I. 2.—2.

* Including "Railroad Accidents."

LAW OF THIS STATE

RELATING TO THE REGISTRY AND RETURNS OF BIRTHS, MARRIAGES AND DEATHS.

AN ACT RELATING TO THE REGISTRY AND RETURNS OF BIRTHS, MARRIAGES AND DEATHS.

SECTION 1. The clerks of the several towns of this State shall, annually, in the month of June, transmit to the Secretary of State a certified copy of their record of births, marriages and deaths, which have occurred in their respective towns during the year next preceding the first day of January. The births shall be numbered and recorded in the order in which they are received by the clerk. The record of births shall state in separate columns the date of the birth, the name of the child (if it have any,) the sex of the child, the place of birth, name and surname of one or both the parents, residence of the parents, occupation of the father, and the time when the record was made. The marriages shall be numbered and recorded in the order in which they are received by the clerk. The record of marriages shall state in separate columns the date and place of marriage, the names and surnames of the groom and bride, the residence of each at the time of marriage, the age of each, occupation of the man, and time when the record was made. The deaths shall be numbered and recorded in the order in which they are received by the clerk. The record of death shall state in separate columns the date of the death, the name and surname of the deceased, the sex, condition (whether married or single), age in years, months and days, the place of death, the disease or apparent cause of death, the occupation, if a male over fifteen years of age, the place of birth, the name of the parents, and the time when the record was made.

SEC. 2. The clerks in the several school districts in each town shall, annually, in the month of February, ascertain, from actual inquiry or otherwise, all the births and deaths which have happened in their respective districts during the year next preceding the first day of January, together with such facts concerning the births and deaths as are required by the preceding section of this chapter, and shall make an accurate return thereof to the clerk of the town in which such school district is situated, on or before the first day of March; and the district clerk, or other person or persons authorized to perform his duties and make such returns, shall be entitled to receive from the treasury of such town five cents for each and every birth and death so returned. And if such person shall neglect or refuse to make the returns required by this section, he shall be liable to a fine of not less than five dollars for each neglect or refusal.

SEC. 3. Every justice of the peace or minister of the gospel shall make a record of each marriage solemnized before him, and every clerk or keeper of records of the meetings wherein any marriage among the people called Friends, or Quakers, shall be solemnized, shall make a record of such marriage, together with all the facts relating to marriages required by the first section of this chapter; and such justice, minister or clerk shall, annually, in the month of February, or from time to time, return a copy of the record for the year next preceding the first day of January, to the clerk of the town in which the marriage was solemnized; and every such person who shall neglect or refuse to make the returns required by this section, shall be liable to a fine of not less than ten dollars for each neglect or refusal, to be recovered on the complaint of a grand juror of such town.

SEC. 4. The clerk of each town shall be entitled to receive from the treasury of the town five cents for recording each birth, death and marriage; provided, said clerk shall comply with the provisions of this chapter in all respects.

SEC. 5. It shall be the duty of the clerks of the several towns to make such distribution of the blank forms of returns as shall be designated by the Secretary of State.

SEC. 6. The Secretary of State shall, at the expense of the State,

prepare and furnish to the clerks of the several towns in this State, blank forms of suitable quality and size, to be used as books of records, according to the provisions of this chapter, and also blank forms of returns, as hereinbefore specified, and shall accompany the same with such instructions and explanations as may be necessary and useful.

SEC. 7. Every physician who shall have been in attendance upon any deceased person, shall leave with the town clerk a certificate containing the name of the disease or cause (if known) of such death within fifteen days after the interment of the deceased. Any such medical attendant who shall neglect or refuse to give the certificate required by this section, shall, for such offense, pay a fine of three dollars, for the use of the town where such offense shall be committed,

SEC. 8. It shall be the duty of the Secretary of State to receive the returns made in pursuance with the first section of this chapter, and he shall cause the same, at the expense of the State, for each year to be bound together in one or more volumes, with indexes thereto; and with such assistance as may be voluntarily rendered by any authorized committee, appointed by the Vermont Medical Society for that purpose, prepare therefrom such tabular results as will render them of practical utility, and make a report thereof annually to the Legislature, and generally shall do whatever may be required to carry into effect the provisions of this chapter.

SEC. 9. The Secretary of State shall cause prosecutions to be commenced, in the name of the State, in an action on the case, founded on this chapter, to recover any penalty or forfeiture imposed by any provisions therein.

AN ACT IN AMENDMENT OF SECTIONS ONE, TWO AND THREE OF CHAPTER SEVENTEEN OF THE GENERAL STATUTES, RELATING TO REGISTRY AND RETURNS OF BIRTHS, MARRIAGES AND DEATHS.

SECTION 1. That chapter seventeen, section two, of the General Statutes, shall be amended by striking out of the ninth line in said section the word "March," and by inserting therein the word "February," and that the word "February," in the second line, be stricken out and the word "January" inserted.

SEC. 2. That from the third section of the same chapter there shall be stricken out the word "February," and inserted therein the word "January."

SEC. 3. That from the first section of the same chapter there shall be stricken out the word "June," and the word "March" inserted.

SEC. 4. This act shall take effect from its passage.

Approved, November 15th 1866.

AN ACT RELATING TO THE FEES OF SCHOOL DISTRICT CLERKS.

SECTION 1. The clerks of the several school districts in this State, for making returns of births and deaths, as now required by law, shall receive as compensation therefor, the sum of fifteen cents for each birth and death so returned ; provided, that in case their returns are incomplete or incorrect, they shall forfeit all compensation therefor, and be liable to a fine of not less than five dollars.

SEC. 2. It is hereby made the duty of the selectmen of the several towns in this State, to draw an order on the treasurer of their respective towns, to pay the compensation aforesaid, on the presentation to them of a certificate from the town clerk that the returns have been made according to law.

SEC. 3. It is hereby made the duty of the several town clerks in this State, to carefully examine the returns of births and deaths made to them by the clerks of the several school districts in their respective towns ; and in case the returns are in all respects made up and returned agreeably to law, they shall furnish to each school district clerk, so complying with the requirements of law, a certificate which shall entitle him to the compensation aforesaid ; and in case such returns are incomplete or incorrect, they shall forthwith cause prosecutions to be commenced against such delinquent school district clerk, in the name of the State, to recover any penalty or forfeiture imposed by the provisions of this act.

SEC. 4. In case any town clerk in this State shall neglect or refuse to comply with the requirements of this act, or with any existing requirements of law in relation to making returns of births, marriages and deaths to the Secretary of State, he shall be liable to a fine of not less than twenty dollars ; and the Secretary of State shall cause prosecutions to be commenced in the name of the State, to recover the penalty aforesaid.

SEC. 5. All acts and parts of acts inconsistent herewith are hereby repealed.

Approved November 19, 1868.

AN ACT TO AMEND CHAPTER SEVENTEEN OF THE GENERAL
STATUTES, RELATING TO "BIRTHS, MARRIAGES AND
DEATHS," AND FOR THE BETTER REGISTRATION THEREOF.

SECTION 1. Section three of chapter seventeen of the General Statutes is hereby amended so as to read as follows :

Every justice of the peace, minister of the gospel, and any and all other persons who are authorized by law to solemnize the rite of marriage, whether in the usual form, or in the manner of the Society of Friends, shall each and all of them require to be placed in their hands, previous to the solemnization of such marriage rite, a certificate, signed by a town or city clerk of a town or city of this State, where such marriage shall be solemnized, and such certificate shall be in the form following, to wit:

STATE OF VERMONT.

Town of _____,

Clerk's office _____, 18—

The following first named person this day applied for Certificate of Marriage. _____ Clerk.

CERTIFICATE OF MARRIAGE.

No. —

1. GROOM'S FULL NAME,
2. Place of Residence,
3. Age,
4. Occupation,
5. Number of Marriage,
6. Place of Birth,
7. Father's Name,
8. Mother's Name,
9. BRIDE'S FULL NAME,
(Maiden name, if a Widow.)
10. Place of Residence,
11. Age,
12. Number of Marriage,
13. Place of Birth,
14. Father's Name,
15. Mother's Name,

The parties above named were joined in marriage at ———, by me, this ——— day of ———, A. D. 18—.

Attest,

And it shall be the duty of such justice of the peace, minister or other person authorized by law to solemnize the marriage rite, to receive such certificate from the hands of the party by him to be joined in matrimony, and complete the same by filling any blank remaining therein when so received by him, and shall add the date of marriage and his official signature thereto, and shall return said certificate to the town or city clerk's office of the town whence such certificate issued within ten days thereafter; and every such person who shall perform the ceremony of marriage in any case, without first requiring and obtaining the certificate hereinbefore described, or who shall neglect or refuse to make such return in manner and form hereinbefore provided, shall be liable to a fine of not less than ten dollars for each offense, to be recovered on the complaint of a grand juror of such town or city; and it shall be the duty of such grand juror, on a notification in writing to him directed by such town or city clerk of the town wherein such neglect or refusal shall have taken place, to prosecute all such cases to effect.

SEC. 2. Section four of chapter seventeen of the General Statutes is hereby so amended as to read as follows:

The clerk of each town or city shall upon application of any person to him made for that purpose, issue to such person a marriage certificate, which shall be in the form prescribed in section one of this act, and at the time of the issue of such certificate he shall make entry thereon of the names of the parties to the marriage in all cases; and shall also enter such other data as is required by said section one to form a part of the record of marriage if then practicable, and shall at the same time make record thereof in a book prepared for such purpose. For making such certificate and record, town and city clerks shall be entitled to receive the sum of twenty-five cents, to be paid by the party obtaining such certificate, which

said fee shall be in lieu of the fee now paid by towns for the records of marriages, to town clerks; and it shall further be the duty of town or city clerks when such certificates or any of them are returned to his office, to complete his record so that it shall conform in all respects to the certificates so returned to him.

SEC. 3. All acts and parts of acts inconsistent herewith are hereby **repealed.**

SEC. 4. **This act shall take effect from its passage.**

Approved November 15, 1869.

NOTE—The figures in the fifth and sixth columns on page 114 are incorrect.
